

ICANN New gTLD Auction Schedule dated 10 October 2014

This Auction schedule has been developed based on an anticipated volume of 20 contention sets per event. However, several factors, including self-resolution of contention sets, Auction eligibility, and postponement requests, will affect the actual number of contention sets participating in each Auction Event. Because of these and other factors, the Auction event for a contention set is subject to change, and the schedule will be updated periodically to reflect these changes. Auction Dates will be confirmed to the application primary contact via the customer portal at least 21 days prior to the Auction.

The latest contention set statuses, including Auction Dates for any contention set, are available on the contention set status page: <https://gtldresult.icann.org/application-result/applicationstatus/stringcontentionstatus>.

The table below contains Auction Dates and Times as well as Deposit Due Dates and Times. The subsequent pages show the list of the contention sets planned for each Auction, which, as mentioned above, is subject to change.
