

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”) and focuses specifically on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice.

In short, we find it disconcerting that the GAC chose to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

That being the case, we are faced with a choice. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

GAC Advice Response Form for Applicants

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

GAC Advice Response Form for Applicants

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

GAC Advice Response Form for Applicants

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully
Wedding TLD LLC

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”). Section (I) focuses on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice. Section (II) focuses specifically on those safeguards “intended to apply to particular categories of new gTLDs” (the “IP Safeguards”) as contained in Annex 1 of the Beijing Advice.

(I) Applicant Comments on the “Safeguards Applicable to all New gTLD’s”

In short, we find it disconcerting that the GAC chose to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

GAC Advice Response Form for Applicants

That being the case, we are faced with a choice. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

GAC Advice Response Form for Applicants

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

GAC Advice Response Form for Applicants

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

*

(II) Response to IP Safeguards "intended to apply to particular categories of new gTLDs"

The GAC identified ".band", our applied for string, within "Category 1", as a string linked to a regulated or professional sector. Specifically, the GAC included .band within its list of strings associated with "Intellectual Property".

We agree with the GAC's assessment that .band is "likely to invoke a level of implied trust from consumers", as ICANN's rigorous oversight will undoubtedly create a high expectations of trustworthiness for all new gTLDs. With a key mission of ensuring "a stable and unified global internet", ICANN is entrusted with a task of significant global importance. By balancing intellectual property protection and community interests, consumer protection, and DNS stability, ICANN clearly expects the new gTLD program to meet or even exceed the trustworthiness that permeates all other ICANN endeavors.

However, we respectfully, yet strongly, disagree with the GAC's contention that .band carries a high level of risk associated with consumer harm. ICANN developed numerous new rights protection mechanisms, including the Trademark Clearinghouse and Uniform Rapid Suspension System, all of which we expect to implement. ICANN and the registry community devoted significant time and effort towards developing mechanisms that would insulate consumers from nearly all risks presented by the new gTLD program. We also intend to implement a robust copyright enforcement policy, in addition to the trademark protections discussed above. These new processes and policies will ensure that .band provides great levels of consumer protection, surpassing even that afforded by existing TLDs.

Moreover, we recognize the importance of intellectual property rights and other consumer vulnerabilities, and plans to place great weight on protecting these interests. As stated in our application for .band, Thomas Brackey, of Freund & Brackey LLP and our General Counsel, has extensive experience litigating international intellectual property rights. His ongoing relationship with us will help to ensure that we are a leader in protecting consumers and their intellectual property rights. We will be part of the solution, not part of the problem. Additionally, adequate legal protections already exist, with the DMCA and Berne Convention offering significant protections to consumers around the world.

Further, we are perplexed as to why .band was identified within the list of gTLDs linked to regulated or professional sectors. The term "band" is a generic word, with no inherent ties to any regulated industry. "Bands" can range from circular rubber strips used to bind objects together, to weight-loss devices (the "Lap Band") and collections of individuals. To the extent that the term references a group of musical performers, it still falls outside of the vaguely defined professional music industry. In fact, the interests of most bands are diametrically

GAC Advice Response Form for Applicants

opposed to the traditional music industry, which endeavors to exploit them. The vast majority of bands are simply collections of friends that enjoy playing music together, and would welcome an open, unrestricted gTLD that offers them the opportunity to share their music with the world.

IP Safeguards

Provided below is further detail on the particular IP Safeguards and our anticipated adherence or otherwise.

1. Acceptable Use Policy

We agree to the application of such to our TLD.

2. Required Notification

We will use reasonable efforts to require registrars at the time of registration to notify registrants of the specifications in our acceptable use policy, provided that such efforts do not impact the appeal of .band to registrars.

3. Security Measures for Collecting Sensitive Data

We agree to the application of such to our TLD.

4. Relationship with Relevant Regulatory Body

We are unaware of any relevant regulatory body or industry self-regulatory body with oversight over any group that may be impacted by .band.

5. Single Point of Contact

We will comply with all WHOIS requirements adopted by ICANN, which in their expected form, should satisfy most if not all GAC concerns. To the extent that these require registrations to provide an up-to-date point of contact for notifications of complaints or reports of registration abuse, we will agree to the application of such to our TLD.

We trust that the above described position will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully,
Red Triangle LLC

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”). Section (I) focuses on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice. Section (II) focuses specifically on those safeguards “intended to apply to particular categories of new gTLDs” (the “IP Safeguards”) as contained in Annex 1 of the Beijing Advice.

(I) Applicant Comments on the “Safeguards Applicable to all New gTLD’s”

In short, we find it disconcerting that the GAC chose to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

GAC Advice Response Form for Applicants

That being the case, we are faced with a choice. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

GAC Advice Response Form for Applicants

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

GAC Advice Response Form for Applicants

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

*

(II) Response to IP Safeguards “intended to apply to particular categories of new gTLDs”

The GAC identified ".discount", our applied for string, within "Category 1", as a string linked to a regulated or professional sector. Specifically, the GAC included .discount within its list of strings associated with "Intellectual Property".

We agree with the GAC's assessment that .discount is "likely to invoke a level of implied trust from consumers", as ICANN's rigorous oversight will undoubtedly create a high expectations of trustworthiness for all new gTLDs. With a key mission of ensuring "a stable and unified global internet", ICANN is entrusted with a task of significant global importance. By balancing intellectual property protection and community interests, consumer protection, and DNS stability, ICANN clearly expects the new gTLD program to meet or even exceed the trustworthiness that permeates all other ICANN endeavors.

However, we respectfully, yet strongly, disagree with the GAC's contention that .discount carries a high level of risk associated with consumer harm. ICANN developed numerous new rights protection mechanisms, including the Trademark Clearinghouse and Uniform Rapid Suspension System, all of which we expect to implement. ICANN and the registry community devoted significant time and effort towards developing mechanisms that would insulate consumers from nearly all risks presented by the new gTLD program. We also intend to implement a robust copyright enforcement policy, in addition to the trademark protections discussed above. These new processes and policies will ensure that .discount provides great levels of consumer protection, surpassing even that afforded by existing TLDs.

Moreover, we recognize the importance of intellectual property rights and other consumer vulnerabilities, and plans to place great weight on protecting these interests. As stated in our application for .discount, Thomas Brackey, of Freund & Brackey LLP and our General Counsel, has extensive experience litigating international intellectual property rights. His ongoing relationship with us will help to ensure that we are a leader in protecting consumers and their intellectual property rights. We will be part of the solution, not part of the problem. Additionally, adequate legal protections already exist, with the DMCA and Berne Convention offering significant protections to consumers around the world.

Further, we are perplexed as to why .discount was identified within the list of gTLDs linked to regulated or professional sectors. The term "discount" is simply a generic word, with no inherent ties to any regulated industry, let alone an "intellectual property" industry or sector. The "Merriam-Webster" dictionary defines "discount" as "a reduction made from the gross amount or value of something". In our view, this definition bears no relationship to "intellectual property", let alone a regulated industry. Accordingly, we respectfully disagree with the GAC's

GAC Advice Response Form for Applicants

advice that .discount warrants additional IP Safeguards for its connection to some intellectual property industry or sector.

IP Safeguards

Provided below is further detail on the particular IP Safeguards and our anticipated adherence or otherwise.

1. Acceptable Use Policy

We agree to the application of such to our TLD.

2. Required Notification

We will use reasonable efforts to require registrars at the time of registration to notify registrants of the specifications in our acceptable use policy, provided that such efforts do not impact the appeal of .discount to registrars.

3. Security Measures for Collecting Sensitive Data

We agree to the application of such to our TLD.

4. Relationship with Relevant Regulatory Body

We are unaware of any relevant regulatory body or industry self-regulatory body with oversight over any group that may be impacted by .band

5. Single Point of Contact

We will comply with all WHOIS requirements adopted by ICANN, which in their expected form, should satisfy most if not all GAC concerns. To the extent that these require registrations to provide an up-to-date point of contact for notifications of complaints or reports of registration abuse, we will agree to the application of such to our TLD.

We trust that the above described position will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully,
Dot Discount LLC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dot Online LLC
Application ID	1-856-67717
Applied for TLD (string)	online

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”). Section (I) focuses on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice. Section (II) focuses specifically on those safeguards “intended to apply to particular categories of new gTLDs” (the “IP Safeguards”) as contained in Annex 1 of the Beijing Advice.

(I) Applicant Comments on the “Safeguards Applicable to all New gTLD’s”

In short, we find it disconcerting that the GAC chose to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

GAC Advice Response Form for Applicants

That being the case, we are faced with a choice. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

(II) Response to IP Safeguards “intended to apply to particular categories of new gTLDs”

The GAC identified ".online", our applied for string, within "Category 1", as a string linked to a regulated or professional sector. Specifically, the GAC included .discount within its list of strings associated with "Intellectual Property".

We agree with the GAC's assessment that .discount is "likely to invoke a level of implied trust from consumers", as ICANN's rigorous oversight will undoubtedly create a high expectations of trustworthiness for all new gTLDs. With a key mission of ensuring "a stable and unified global internet", ICANN is entrusted with a task of significant global importance. By balancing intellectual property protection and community interests, consumer protection, and DNS stability, ICANN clearly expects the new gTLD program to meet or even exceed the trustworthiness that permeates all other ICANN endeavors.

However, we respectfully, yet strongly, disagree with the GAC's contention that .online carries a high level of risk associated with consumer harm. ICANN developed numerous new rights protection mechanisms, including the Trademark Clearinghouse and Uniform Rapid Suspension System, all of which we expect to implement. ICANN and the registry community devoted significant time and effort towards developing mechanisms that would insulate consumers from nearly all risks presented by the new gTLD program. We also intend to implement a robust copyright enforcement policy, in addition to the trademark protections discussed above. These new processes and policies will ensure that .online provides great levels of consumer protection, surpassing even that afforded by existing TLDs.

Moreover, we recognize the importance of intellectual property rights and other consumer vulnerabilities, and plans to place great weight on protecting these interests. As stated in our application for .online, Thomas Brackey, of Freund & Brackey LLP and our General Counsel, has extensive experience litigating international intellectual property rights. His ongoing relationship with us will help to ensure that we are a leader in protecting consumers and their intellectual property rights. We will be part of the solution, not part of the problem. Additionally, adequate legal protections already exist, with the DMCA and Berne Convention offering significant protections to consumers around the world.

Further, we are perplexed as to why .discount was identified within the list of gTLDs linked to regulated or professional sectors. The term "online" is a simply a generic word, with no inherent ties to any regulated industry, let alone a professional "intellectual property" industry or sector. In our view, .online is a truly generic TLD, much like .com, meaning that an associated website is simply on the Internet. This bears no relationship to "intellectual property", and

GAC Advice Response Form for Applicants

Accordingly, we respectfully disagree with the GAC's advice that .online warrants additional IP Safeguards for its connection to some intellectual property industry or sector.

IP Safeguards

Provided below is further detail on the particular IP Safeguards and our anticipated adherence or otherwise.

1. Acceptable Use Policy

We agree to the application of such to our TLD.

2. Required Notification

We will use reasonable efforts to require registrars at the time of registration to notify registrants of the specifications in our acceptable use policy, provided that such efforts do not impact the appeal of .online to registrars.

3. Security Measures for Collecting Sensitive Data

We agree to the application of such to our TLD.

4. Relationship with Relevant Regulatory Body

We are unaware of any relevant regulatory body or industry self-regulatory body with oversight over any group that may be impacted by .band

5. Single Point of Contact

We will comply with all WHOIS requirements adopted by ICANN, which in their expected form, should satisfy most if not all GAC concerns. To the extent that these require registrations to provide an up-to-date point of contact for notifications of complaints or reports of registration abuse, we will agree to the application of such to our TLD.

We trust that the above described position will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Dot Online LLC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	CORE Association
Application ID	1-862-90073
Applied for TLD (string)	с а й т

Response:

A) Introduction

Even though .с а й т TLD application is not directly mentioned in the GAC Advice, CORE agrees with the GAC on the need to safeguard consumers, and their trust in the Domain-Name System, and hence wants to make the following statements with regard to the с а й т application.

B) Safeguards for the .с а й т TLD

CORE concurs with the GAC when it states that TLDs specially relevant to the protection of consumers' trust must be operated in full conformity with applicable laws, and apply relevant policies in an open and non-discriminatory manner. This is precisely why our application contains all the necessary safeguards to guarantee that registrants in the .с а й т TLD not only comply with applicable laws, but that the namespace enables the highest level of consumer trust. These concerns, and these safeguards will be carried to .с а й т TLD Policies, Agreements and Dispute Resolution Procedures.

B.1 Registration policies. Registration in .с а й т TLD is not restricted to any particular type of activity, but it is limited by the conditions that the domain name, and its use (including content) are: - generally accepted as legitimate; and, - commensurate with the role and importance of the registered domain name. Please check our response to Q18 (b)(iv) for a more detailed description of the policy.

B.2 Enforcement Mechanisms. We would like to raise the attention more specifically to the enforcement mechanisms devised by CORE to maintain the quality of the .c a й T TLD namespace and its compliance with the rules, and mitigate possible abuses. In this regard, we should list (please see detailed explanation in our responses to the Questions noted in each case in the .c a й T TLD application):

1. Rapid Takedown Policy for cases of general malicious conduct (Q28.1)
2. Single Point of Contact for Abusive behavior on the Registry's side (Q28.3)
3. Ex-Officio Random Checks of the usage of registered Domain Names (Q18 (b)(iv))

We firmly believe that in conjunction with our registration policies and ICANN-mandated policies and Dispute Resolution Procedures, CORE adequately addresses all the safeguards outlined by GAC both for those applicable to all new gTLDs as well as the additional safeguards advised for certain categories of new gTLDs.

C) Conclusion

With regard to the more operational and policy specific points contained in the GAC advice, CORE looks forward to the output of ICANN's current public forum in connection with the GAC's most recent advice. We should also note concern regarding some content-related provisions that could lead to impractical, inefficient and unenforceable content-general monitoring obligations, which are also not compatible with many legal orders.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondent:

Applicant Name	Nevaeh Ventures Inc
Application ID	1-865-67813
Applied for TLD (string)	rip

Response:

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”) and focusses specifically on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice.

In short, we are both disappointed and frustrated that the GAC has chosen to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted. That being the case, we are faced with a choice between a lesser of two evils. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under severe duress.
Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO's creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement. We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested "technical analysis". Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

GAC Advice Response Form for Applicants

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully

Respondent:

Applicant Name	Desi Networks, LLC
Application ID	1-870-27617
Applied for TLD (string)	desi

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.). Should the ICANN board decide to request that these sections of the contract are to be implemented into the ICANN new gTLD agreement, we are willing to comply with such a request.

While we do not believe this will add any additional public benefit for the users of these TLDs, we accept the new requirement to only accredit registrars that sign the new RAA can be eligible in our TLDs.

Thank you very much for this opportunity to highlight our view on these issues.

Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

GAC Advice Response Form for Applicants

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

GAC Advice Response Form for Applicants

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully
Dot Construction LLC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	TUI AG
Application ID	1-874-4984
Applied for TLD (string)	tui

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Merchant Law Group LLP
Application ID	1-875-2472
Applied for TLD (string)	.law

Response:

MLG response for .LAW

Application number: 1-875-2472 for Merchant Law Group LLP (MLG)

We are responding to the Beijing Governmental Advisory Committee (GAC) Communique as an applicant for the .LAW new gTLD.

As stated in our application for the .LAW new gTLD, MLG envisions the .LAW new gTLD as providing a distinct online presence for all individuals, groups, businesses, organizations, associations, and other related entities that engage in the provision of legal information, legal services, police services, legislative initiatives, and other law related activities.

We support the efforts of the GAC but have concerns about the recent Beijing GAC Communique. We believe elements of the Beijing GAC Communique require further clarity or amendment and request that the ICANN Board provide applicants with additional guidance before requiring or requesting any applicant to alter their applications or business models.

Specifically, we request further clarity and guidance on the following issues:

1. To what extent and when will the terms and requirements of the Beijing GAC Communique be required of applicants with strings listed in “Category 1” of Annex 1?
2. It can be argued that strings listed in “Category 1” of Annex 1, which includes the .LAW string, are essentially converted from gTLDs into sTLDs or another form of TLD with restrictions and requirements beyond those stipulated in the Applicant Guidebook. Respectfully, MLG submitted a gTLD application. Accordingly, please clarify:

GAC Advice Response Form for Applicants

- a) To what extent will ICANN adopt and then enforce this conversion?
 - b) Who will determine the final list of TLDs that fall under “Category 1” of Annex 1 since the Beijing GAC Communique states that the list is non-exhaustive?
 - c) When will the final list of TLDs that fall under “Category 1” of Annex 1 be released?
 - d) What are the methods of appeal for applicants with strings that fall under “Category 1” of Annex 1?
 - e) Which TLD’s in the final list of TLDs that fall under “Category 1” of Annex 1 will be subject to further targeted safeguards as outlined in the “The GAC further advises the Board:” section of the Beijing GAC Communique?
 - f) To what extent will ICANN adopt and then enforce the further targeted safeguards as outlined in the “The GAC further advises the Board:” section of the Beijing GAC Communique?
 - g) The .LAW new gTLD has multiple uses and further targeted safeguards as outlined in the “The GAC further advises the Board:” section of the Beijing GAC Communique may not be inapplicable. What are the methods of appeal for applicants with strings that become subject to further targeted safeguards as outlined in the “The GAC further advises the Board:” section of the Beijing GAC Communique?
 - h) Who will determine the relevant regulatory bodies, licensing bodies, national supervisory authorities, or their equivalents as referenced in “The GAC further advises the Board:” section of the Beijing GAC Communique?
 - i) What degree of consultation will be required with any relevant regulatory or licensing body, national supervisory authority, or their equivalent to adhere to the targeted safeguards as outlined in the “The GAC further advises the Board:” section of the Beijing GAC Communique?
 - j) What are ICANN’s contingency plans if some or all relevant regulatory or licensing bodies, national supervisory authorities, or their equivalents, decline to work with the registry operator?
3. The proposed terms and requirements for strings that fall under “Category 1” of Annex 1 may require MLG to modify its business model and application as currently written for the .LAW new gTLD. Please clarify and provide guidance on the mechanisms ICANN will provide for making changes to applications, business models, and commitments if the terms and requirements for strings that fall under “Category 1” of Annex 1 are approved by ICANN?
- a) The change request process in its current form is not an appropriate mechanism for making any application alterations that could be required by the Beijing GAC Communique. We believe changes made through this process will slow the approval of applications with strings that fall under “Category 1” of Annex 1 and this will jeopardize the integrity of the prioritization drawing system.

GAC Advice Response Form for Applicants

b) Any solution ICANN devises for application alterations must be fair, equitable, and not jeopardize the order conferred by the prioritization drawing system and should not penalize applicants whose TLDs may be subject to additional requirements by way of the Beijing GAC Communique.

c) We believe that applicants with strings that fall under “Category 1” of Annex 1 should not be required to undertake any material changes to their business models or applications before the ICANN Board has confirmed the parameters of the Beijing GAC Communique requirements.

4. We request clarification of question 6 of Annex II. Does this question imply the GAC may at some stage require applicants to submit Public Interest Commitments Specifications?

We respectfully request that the ICANN Board address the aforementioned issues and clarify them for the benefit of all applicants. MLG is prepared to proceed with its application under any circumstances but we encourage the ICANN Board to sparingly adopt recommendations from the Beijing GAC Communique. We believe it is essential to understand the extent to which the Beijing GAC Communique terms and requirements will be implemented or enforced prior to making any changes to our application.

Respondent:

Applicant Name	Dot Registry, LLC
Application ID	1-880-17627
Applied for TLD (string)	.LLC

Response:

As the only community applicant for the .LLC extension, Dot Registry, LLC is acutely aware of the need for safeguards and registration policies that will ensure the long term integrity of the .LLC gTLD for both registrants and consumers.

Dot Registry’s mission of building confidence, trust, reliance and loyalty for consumers and business owners alike; by creating a dedicated gTLD to specifically serve the Community of Registered Limited Liability Companies is supported through their registry service, registration policies, dispute resolution processes, and ICANN required rights protection mechanisms. Dot Registry will foster consumer peace of mind with confidence. By ensuring that all domains bearing our gTLD string are members of the Registered Community of US Limited Liability Companies. Our verification process will create an unprecedented level of security for online consumers by authenticating each of our registrant’s right to conduct business in the United States. The “.LLC” gTLD will fill a unique void in the current DNS and assist in decreasing the burden on existing domain names, by identifying members of the Registered Community of Limited Liability Companies.

The social implications of business identity theft and consumer confusion are a paramount concern to DOT Registry. In our currently unstable economy, stimulating economic growth is vital. One means to such growth is by defusing the rampant, legitimate fear caused by online crimes and abuse, which leads to curtailed consumer behavior. By introducing the “.LLC” domain into the DNS, DOT Registry will attempt to reduce the social impact of identity theft on business owners which will in turn reduce consumer fears related to spending and ultimately boost economic growth in regards to consumption and purchase power.

Dot Registry’s application currently contains the following registration policies and naming conventions, which directly address the concerns listed by GAC in their April 11th advice (the below excerpts are pulled directly from our application response to question 18):

GAC Advice Response Form for Applicants

- 1) A Registrant will only be awarded the “.LLC” domain that matches or includes a substantial part of the Registrant’s legal name. For example, Blue Star Partners, LLC. would be able to purchase either BlueStarPartners.LLC or BlueStar.LLC.
- 2) Registrants will not be allowed to register product line registrations, regardless of the products affiliation to the corporation. All awarded domains must match or include a substantial part of the Registrant’s legal name.
- 3) If there are registrants applying for the same domain names, which correspond to their legal business names as registered in different states, then the “.LLC” domain will be awarded on a first-come, first-served basis to the first registrant.
- 4) However, if a registrant has a trademark registered with the United States Patent and Trademark Office (USPTO), then such registrant will have priority over any other registrant to be awarded the applied for “.LLC” domain.
- 5) If a registrant’s “.LLC” domain has already been awarded to another registrant with the same or similar legal name, then DOT Registry will offer to award such registrant a “.LLC” domain with a distinctive denominator including but not limited to a tag, company describer, or name abbreviation. For example, if BlueStar.LLC was awarded to Blue Star Partners, Inc. of California, then Blue Star Partners, Inc. of Kansas would be offered the opportunity to use BlueStarPartners.LLC.
- 6) DOT Registry will work closely with the Secretary of State’s Offices throughout the United States, with NASS and with a number of other agencies and organizations in maintaining the integrity and security of its domain names. DOT Registry will utilize the Secretary of States’ online resources to confirm that companies applying for their “.LLC” domain are in fact registered businesses.
- 7) All registrants that are awarded the “.LLC” domain will agree to a one-year minimum contract for their domain names that will automatically renew for an additional year on an annual basis if such contract is not terminated prior to the expiration of the renewal date.
- 8) DOT Registry or it’s designated agent will annually verify each registrants community status. Verification will occur in a process similar to the original registration process for each registrant, in which the registrars will verify each registrant’s “Active” Status with the applicable state authority. Each registrar will evaluate whether its registrants can still be considered “Active” members of the Community of Registered Limited Liability Companies. In this regard, the following items would be considered violations of DOT Registry’s Registration Guidelines, and may result in dissolution of a registrant’s awarded “.LLC” domain:
 - (a) If a registrant previously awarded the “.LLC” domain ceases to be registered with the State.
 - (b) If a registrant previously awarded a “.LLC” domain is dissolved and/or forfeits the domain for any reason.
 - (c) If a registrant previously awarded the “.LLC” domain is administratively dissolved by the State.Any registrant found to be “Inactive,” or which falls into scenarios (a) through (c) above, will be issued a probationary warning by their registrar, allowing for the registrant to restore its active status or resolve its dissolution with its applicable Secretary of State’s office. If the registrant is unable to restore itself to “Active” status within the defined probationary period, their previously assigned “.LLC” will be forfeited. DOT Registry reserves the right to change the definition of “Active” in accordance with the policies of the Secretaries of State. Domains will be temporarily suspended during the review process.
- 9) If DOT Registry discovers that a registrant wrongfully applied for and was awarded a “.LLC” domain, then such “.LLC” will be immediately forfeited to DOT Registry. Wrongful

application includes but is not limited to: a registrant misrepresenting itself as a member of the Community of Registered Limited Liability Companies, a registrant participating in illegal or fraudulent actions, or where a registrant would be in violation of our abuse policies described in Question 28 (including promoting or facilitating spam, trademark or copyright infringement, phishing, pharming, willful distribution of malware, fast flux hosting, botnet command and control, distribution of pornography, illegal access to other computers or networks, and domain kiting/tasting).

10) In the case of domain forfeiture due to any of the above described options, all payments received by the Registrant for registration services to date or in advance payment will be non-refundable.

11) All registration information will be made publicly available. DOT Registry will not accept blind registration or registration by proxy. DOT Registry's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement. Additionally, DOT Registry will provide a Web-based WHOIS application, which will be located at www.whois.LLC. The WHOIS Web application will be an intuitive and easy to use application which will allow the general public to easily access registration information for each ".LLC" site. A complete description of these services can be found in Question 26 below.

12) Awarded names are non-transferrable to entities outside of the designated community, regardless of affiliation to any member of the community. In the event that a registrant's business entity merges, is acquired, or sold, the new entity will be allowed to maintain the previously awarded ".LLC" domain until the domain renewal date, at which point they will be evaluated as described in number seven (7) above. Further, any entity acquiring a ".LLC" domain through the processes described in this guideline that does not meet the registration criteria and wishes to maintain the awarded domain will be allowed a grace period after the renewal verification process to correct any non-compliance issues in order to continue operating their acquired domain. If the said entity is unable to comply with DOT Registry's guidelines, the awarded domain will be revoked.

13) If an application is unable to be verified or does not meet the requirements of the sponsored community, the application will be considered invalid. In addition to Applicant's comprehensive eligibility, verification, and policing mechanisms, DOT Registry will implement a series of Rights Protection Mechanisms (RPM), including but not limited to: Support for and interaction with the Trademark Clearinghouse ("Clearinghouse"); use of the Trademark Claims Service; segmented Sunrise Periods allowing for the owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks; subsequent Sunrise Periods to give trademark owners or registrants that own the rights to a particular name the ability to block the use of such name; and stringent take down policies and all required dispute resolution policies. Dot Registry's dispute resolution processes, rights protection mechanisms, trademark clearing house procedures and whois verification information are further supported in their application in the following sections:

Question 22

Protection of Geographic Names at the Second Level of your proposed gTLD

Applicant has thoroughly reviewed ISO 3166-1 and ISO 3166-2, relevant UN documents on the standardization of geographic names, GAC correspondence relating to the reservation of geographic names in the .INFO TLD, and understands its obligations under Specification 5 of the

draft Registry Agreement. Applicant shall implement measures similar to those used to protect geographic names in the .INFO TLD by reserving and registering to itself all the geographic place names found in ISO-3166 and official country names as specified by the UN. Applicant has already discussed this proposed measure of protecting geographic names with its registry services provider, Neustar, and has arranged for such reservation to occur as soon after delegation as is technically possible.

Question 26

Whols Compliance

As with the .INFO TLD, only if a potential second-level domain registrant makes a proper showing of governmental support for country or territorial names will Applicant then relay this request to ICANN. At this point, Applicant would wait for the approval of the GAC and of ICANN before proceeding to delegate the domain at issue.

Applicant recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders, and the public as a whole, and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement and relevant RFCs.

Applicant's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs, and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, the WHOIS service provided by Applicant's registry services operator has been designed from the ground up to display as much information as required by ICANN and respond to a very stringent availability and performance requirement.

Some of the key features of Applicant's WHOIS services will include:

- Fully compliant with all relevant RFCs including 3912;
- Production proven, highly flexible, and scalable (applicant's back-end registry services provider has a track record of 100% availability over the past 10 years);
- Exceeds current and proposed performance specifications;
- Supports dynamic updates with the capability of doing bulk updates;
- Geographically distributed sites to provide greater stability and performance; and
- Search capabilities (e.g., IDN, registrant data) that mitigate potential forms of abuse as discussed below.

Applicant's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

Applicant's WHOIS service will support port 43 queries, and will be optimized for speed using an in-memory database and a master-slave architecture between SRS and WHOIS slaves. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Applicant's registry services operator currently processes millions of WHOIS queries per day.

GAC Advice Response Form for Applicants

In addition to the WHOIS Service on port 43, Applicant will provide a Web-based WHOIS application, which will be located at www.whois.LLC. This WHOIS Web application will be an intuitive and easy to use application for the general public to use. The WHOIS Web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

The WHOIS web application will also provide features not available on the port 43 service. These include:

- Extensive support for international domain names (IDN)
- Ability to perform WHOIS lookups on the actual Unicode IDN
- Display of the actual Unicode IDN in addition to the ACE-encoded name
- A Unicode to Punycode and Punycode to Unicode translator
- An extensive FAQ
- A list of upcoming domain deletions

Applicant will also provide a searchable web-based WHOIS service in accordance with Specification 4 Section 1.8 The application will enable users to search the WHOIS directory to find exact or partial matches using any one or more of the following fields:

- Domain name
- Contacts and registrant's name
- Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)
- Registrar ID
- Name server name and IP address
- Internet Protocol addresses
- The system will also allow search using non-Latin character sets which are compliant with IDNA specification

The WHOIS user will be able to choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria and their WHOIS information will quickly be returned to the user.

In order to reduce abuse for this feature, only authorized users will have access to the Whois search features after providing a username and password.

Applicant will provide third party access to the bulk zone file in accordance with Specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider, which will make access to the zone files in bulk via FTP to any person or organization that signs and abides by a Zone File Access (ZFA) Agreement with the registry. Contracted gTLD registries will provide this access daily and at no charge.

Applicant will also provide ICANN and any emergency operators with up-to-date Registration Data on a weekly basis (the day to be designated by ICANN). Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, unless ICANN requests other means in the future. Applicant's Legal Team will regularly monitor the registry service provider to ensure that they are providing the services as described above. This will entail random monthly testing of the WHOIS port 43 and Web-based services to ensure that they meet the ICANN Specifications and

GAC Advice Response Form for Applicants

RFCs as outlined above, if not, to follow up with the registry services provider to ensure that they do. As the relevant WHOIS will only contain Applicant's information, Applicant's WHOIS services will necessarily be in compliance with any applicable privacy laws or

Question 28

Abuse Prevention and Mitigation

General Statement of Policy

Abuse within the registry will not be tolerated. DOT Registry will implement very strict policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. DOT Registry's homepages will provide clear contact information for its Abuse Team, and in accordance with ICANN policy DOT Registry shall host NIC.LLC, providing access to .LLC's Whois services, the Abuse Policy, and contact information for the Abuse Team.

Anti-Abuse Policy

DOT Registry will implement in its internal policies and its Registry-Registrar Agreements (RRAs) that all registered domain names in the TLD will be subject to a Domain Name Anti-Abuse Policy ("Abuse Policy").

The Abuse Policy will provide DOT Registry with broad power to suspend, cancel, or transfer domain names that violate the Abuse Policy. DOT Registry will publish the Abuse Policy on its home website at NIC.LLC and clearly provide DOT Registry's Point of Contact ("Abuse Contact") and its contact information. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of abuse complaints, and a telephone number and mailing address for the primary contact. DOT Registry will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made.

In addition, with respect to inquiries from ICANN-Accredited registrars, the Abuse Contact shall handle requests related to abusive domain name practices.

Inquiries addressed to the Abuse Contact will be routed to DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy as described in more detail below. DOT Registry will catalog all abuse communications in its CRM software using a ticketing system that maintains records of all abuse complaints indefinitely. Moreover, DOT Registry shall only provide access to these records to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

The Abuse Policy will state, at a minimum, that DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to ; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Registry, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, registry services provider, or any registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant's

GAC Advice Response Form for Applicants

pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.

The Abuse Policy will define the abusive use of domain names to include, but not be limited to, the following activities:

- **Illegal or fraudulent actions:** use of the DOT Registry's or Registrar's services to violate the laws or regulations of any country, state, or infringe upon the laws of any other jurisdiction, or in a manner that adversely affects the legal rights of any other person;
- **Spam:** use of electronic messaging systems from email addresses from domains in the TLD to send unsolicited bulk messages. The term applies to e-mail spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of Web sites and Internet forums;
- **Trademark and Copyright Infringement:** DOT Registry will take great care to ensure that trademark and copyright infringement does not occur within the .LLC TLD. DOT Registry will employ notice and takedown procedures based on the provisions of the Digital Millennium Copyright Act (DMCA) ;
- **Phishing:** use of counterfeit Web pages within the TLD that are designed to trick recipients into divulging sensitive data such as usernames, passwords, or financial data;
- **Pharming:** redirecting of unknowing users to fraudulent Web sites or services, typically through DNS hijacking or poisoning;
- **Willful distribution of malware:** dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and trojan horses.
- **Fast flux hosting:** use of fast-flux techniques to disguise the location of Web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities. Fast-flux techniques use DNS to frequently change the location on the Internet to which the domain name of an Internet host or name server resolves. Fast flux hosting may be used only with prior permission of DOT Registry;
- **Botnet command and control:** services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct denial-of-service attacks (DDoS attacks);
- **Distribution of pornography;**
- **Illegal Access to Other Computers or Networks:** illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity);
- **Domain Kiting/Tasting:** registration of domain names to test their commercial viability before returning them during a Grace Period;
- **High Volume Registrations/Surveying:** registration of multiple domain names in order to warehouse them for sale or pay-per-click websites in a way that can impede DOT Registry from offering them to legitimate users or timely services to other subscribers;
- **Geographic Name:** registering a domain name that is identical to a Geographic Name, as defined by Specification 5 of the Registry Agreement;
- **Inadequate Security:** registering and using a domain name to host a website that collects third-party information but does not employ adequate security measures to protect

third-party information in accordance with that geographic area's data and financial privacy laws;

- Front Running: registrars mining their own web and Whois traffic to obtain insider information with regard to high-value second-level domains, which the registrar will then register to itself or an affiliated third party for sale or to generate advertising revenue;
- Whois Accuracy: Intentionally inserting false or misleading Registrant information into the TLD's Whois database in connection with the bad faith registration and use of the domain in question;
- Whois Misuse: abusing access to the Whois database by using Registrant information for data mining purposes or other malicious purposes;
- Fake Renewal Notices; misusing Whois Registrant information to send bogus renewal notices to Registrants on file with the aim of causing the Registrant to spend unnecessary money or steal or redirect the domain at issue.

Domain Anti-Abuse Procedure

DOT Registry will provide a domain name anti-abuse procedure modeled after the DMCA's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LLC the Abuse Policy and the contact information for the Abuse Contact. Inquiries addressed to the Point of Contact will be addressed to and received by DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy. DOT Registry will catalog all abuse communications and provide them to third parties only under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any correspondence ("Complaint") from a complaining party ("Complainant") to the Abuse Contact will be ticketed in DOT Registry's CRM software and relayed to DOT Registry's Abuse Team. A member of DOT Registry's Abuse Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email and that DOT Registry will notify the Complainant of the results of the Complaint within ten (10) days of receiving the Complaint.

DOT Registry's Abuse Team will review the Complaint and give it a "quick look" to see if the Complaint reasonably falls within an abusive use as defined by the Abuse Policy. If not, the Contact will write an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated abusive uses as defined by the Abuse Policy and that DOT Registry considers the matter closed.

If the quick look does not resolve the matter, DOT Registry's Abuse Team will give the Complaint a full review. Any Registrant that has been determined to be in violation of DOT Registry policies shall be notified of the violation of such policy and their options to cure the violation. Such notification shall state:

- 1) the nature of the violation;
- 2) the proposed remedy to the violation;
- 3) the time frame to cure the violation; and

4) the Registry's options to take subsequent action if the Registrant does not cure the violation.

If an abusive use is determined DOT Registry's Abuse Team will alert it's Registry services team to immediately cancel the resolution of the domain name. DOT Registry's Abuse Team will immediately notify the Registrant of the suspension of the domain name, the nature of the complaint, and provide the Registrant with the option to respond within ten (10) days or the domain will be canceled.

If the Registrant responds within ten (10) business days, it's response will be reviewed by the DOT Registry's Abuse Team for further review. If DOT Registry's Abuse Team is satisfied by the Registrant's response that the use is not abusive, DOT Registry's Abuse Team will submit a request by the registry services provider to reactivate the domain name. DOT Registry's Abuse Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the Registrant does not respond within ten (10) business days, DOT Registry will notify the registry services team to cancel the abusive domain name.

This Anti-Abuse Procedure will not prejudice either party's election to pursue another dispute mechanism, such as URS or UDRP.

With the resources of DOT Registry's registry services personnel, DOT Registry can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one (1) business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, questions, or comments concerning the request, and an outline of the next steps to be taken by Application for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by DOT Registry and involves the type of activity set forth in the Abuse Policy, the sponsoring registrar is then given forty-eight (48) hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 48-hour period (i.e., is unresponsive to the request or refuses to take action), DOT Registry will place the domain on "serverHold".

Maintenance of Registration Criteria

If a Registrant previously awarded the ".LLC" domain ceases to be registered with a Secretary of State or legally applicable jurisdiction, such Registrant will be required to forfeit the assigned ".LLC" domain at their designated renewal date.

If DOT Registry discovers that a Registrant wrongfully applied for and was awarded a ".LLC" domain, then such ".LLC" will be immediately forfeited to DOT Registry.

If a Registrant previously awarded a ".LLC" domain is dissolved and/or forfeited for any reason, then such ".LLC" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".LLC" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".LLC" will be forfeited to DOT

GAC Advice Response Form for Applicants

Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

A Registrant's "Active" Status will be verified annually. Any Registrant not considered "Active" by the definition listed above in question 18 will be given a probationary warning, allowing time for the Registrant to restore itself to "Active" Status. If the Registrant is unable to restore itself to "Active" status within the defined probationary period, their previously assigned ".LLC" will be forfeited. In addition, DOT Registry's definition of "Active" may change in accordance with the policies of the Secretaries of State.

Orphan Glue Removal

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often supports correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in the DNS. Therefore, when DOT Registry has written evidence of actual abuse of orphaned glue, DOT Registry will take action to remove those records from the zone to mitigate such malicious conduct.

DOT Registry's registry service operator will run a daily audit of entries in its DNS systems and compare those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either DOT Registry or its registry services operator becomes aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

Whols Accuracy

DOT Registry will provide Whois accessibility in a reliable, consistent, and predictable fashion in order to promote Whois accuracy. The Registry will adhere to port 43 Whois Service Level Agreements (SLAs), which require that port 43 WHOIS service be highly accessible and fast.

DOT Registry will offer thick Whois services, in which all authoritative Whois data—including contact data—is maintained at the registry. DOT Registry will maintain timely, unrestricted, and public access to accurate and complete Whois information, including all data objects as specified in Specification 4. Moreover, prior to the release of any domain names, DOT Registry's registrar will provide DOT Registry with an authorization code to verify eligible Registrants provide accurate Registrant contact information.

GAC Advice Response Form for Applicants

In order to further promote Whois accuracy, DOT Registry will offer a mechanism whereby third parties can submit complaints directly to the DOT Registry (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete Whois data. Such information shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to cancel or suspend the applicable domain name(s) should DOT Registry determine that the domains are being used in a manner contrary to DOT Registry's abuse policy.

DOT Registry shall also require authentication and verification of all Registrant data. DOT Registry shall verify the certificates of incorporation, whether a corporation is in active status, contact information, e-mail address, and, to the best of its abilities, determine whether address information supplied is accurate. Second-level domains in the TLD shall not be operational unless two (2) out of three (3) of the above authentication methods have been satisfied.

With regard to registrars, DOT Registry shall provide financial incentives for pre-authentication of Registrant data prior to such data being passed to the registry. DOT Registry will provide for lower renewal and bulk registration fees in its RRAs for registrations which have been pre-authenticated and which DOT Registry can rely on as accurate data to be entered into its Whois database. Also in its RRAs, DOT Registry will also provide for higher fees and penalties for Registrant data which is obscured by proxies.

DOT Registry will also maintain historical databases of Registrants and associated information which have provided inaccurate Whois information. DOT Registry will endeavor to use this database to uncover patterns of suspicious registrations which DOT Registry shall then flag for further authentication or for review of the Registrant's use of the domain in question to ensure Registrant's use is consonant with DOT Registry's abuse policy.

In addition, DOT Registry's Abuse Team shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of domain names within the applied-for TLD to test the accuracy of the Whois information. Although this will not include verifying the actual information in the WHOIS record, DOT Registry will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, the DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to suspend the applicable domain name(s) should DOT Registry determine that the Registrant is using the domain in question in a manner contrary to DOT Registry's abuse policy. DOT Registry shall also reserve the right to report such recalcitrant registrar activities directly to ICANN.

Abuse Prevention and Mitigation – Domain Name Access

GAC Advice Response Form for Applicants

All domain name Registrants will have adequate controls to ensure proper access to domain functions.

In addition to the above, all domain name Registrants in the applied-for TLD will be required to name at least two (2) unique points of contact who are authorized to request and/or approve update, transfer, and deletion requests. The points of contact must establish strong passwords with the registrar that must be authenticated before a point of contact will be allowed to process updates, transfer, and deletion requests. Once a process update, transfer, or deletion request is entered, the points of contact will automatically be notified when a domain has been updated, transferred, or deleted through an automated system run by DOT Registry's registrar. Authentication of modified Registrant information shall be accomplished 48 Hours.

Question 29

Rights Protection Mechanisms

DOT Registry is committed to implementing strong and integrated Rights Protection Mechanisms (RPM). Use of domain names that infringe upon the legal rights of others in the TLD will not be tolerated. The nature of such uses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. DOT Registry will protect the legal rights of others by implementing RPMs and anti-abuse policies backed by robust responsiveness to complaints and requirements of DOT Registry's registrars.

Trademark Clearinghouse

Each new gTLD Registry will be required to implement support for, and interaction with, the Trademark Clearinghouse ("Clearinghouse"). The Clearinghouse is intended to serve as a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. The data maintained in the Clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service.

Utilizing the Clearinghouse, all operators of new gTLDs must offer: (i) a Sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a Trademark Claims Service for at least the first 60 days that second-level registrations are open. The Trademark Claims Service is intended to provide clear notice to a potential registrant of the rights of a trademark owner whose trademark is registered in the Clearinghouse.

Sunrise A Period

DOT Registry will offer segmented Sunrise Periods. The initial Sunrise Period will last [minimum 30 days] for owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks. All domain names registered during the Sunrise Period will be subject to DOT Registry's domain name registration policy, namely, that all registrants be validly registered Limited Liability Companies and all applied-for domains will only be awarded the ".LLC" domain that matches or includes a substantial part of the Registrant's legal name. DOT Registry will assign its Rights Protection Team; which is lead by our Director of

GAC Advice Response Form for Applicants

Legal and Policy and further supported by two dedicated employees to receive and authenticate all Sunrise Registrations.

DOT Registry's registrar will ensure that all Sunrise Registrants meet sunrise eligibility requirements (SERs), which will be verified by Clearinghouse data. The proposed SERs include: (i) ownership of a mark that is (a) nationally or regionally registered and for which proof of use, such as a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (b) that have been court-validated; or (c) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008, (ii) optional registry elected requirements concerning international classes of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

Upon receipt of the Sunrise application, DOT Registry will issue a unique tracking number to the Registrar, which will correspond to that particular application. All applications will receive tracking numbers regardless of whether they are complete. Applications received during the Sunrise period will be accepted on a first-come, first-served basis and must be active Limited Liability Companies in good standing before they may be awarded the requested domain, or able to proceed to auction. Upon submission of all of the required information and documentation, registrar will forward the information to DOT Registry's [RPM Team] for authentication. DOT Registry's [RPM Team] will review the information and documentation and verify the trademark information, and notify the potential registrant of any deficiencies. If a registrant does not cure any trademark-related deficiencies and/or respond by the means listed within one (1) week, DOT Registry will notify its registrar and the domain name will be released for registration.

DOT Registry will incorporate a Sunrise Dispute Resolution Policy (SDRP). The SDRP will allow challenges to Sunrise Registrations by third parties for a ten-day period after acceptance of the registration based on the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national or regional effect or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

After receiving a Sunrise Complaint, DOT Registry's [RPM Team] will review the Complaint to see if the Complaint reasonably asserts a legitimate challenge as defined by the SDRP. If not, DOT Registry's [RPM Team] will send an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated grounds as defined by the SDRP and that DOT Registry considers the matter closed.

If the domain name is not found to have adequately met the SERs, DOT Registry's [RPM Team] will alert the registrar and registry services provider to immediately suspend the resolution of the domain name. Thereafter, DOT Registry's [RPM Team] will immediately notify the Sunrise Registrant of the suspension of the domain name, the nature of the complaint, and provide the

GAC Advice Response Form for Applicants

registrant with the option to respond within ten (10) days to cure the SER deficiencies or the domain name will be canceled.

If the registrant responds within ten (10) business days, its response will be reviewed by DOT Registry's [RPM Team] to determine if the SERs are met. If DOT Registry's [RPM Team] is satisfied by the registrant's response, DOT Registry's [RPM Team] will submit a request to the registrar and the registry services provider to unsuspend the domain name. DOT Registry's [RPM Team] will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial.

Names secured as described through the Sunrise AT/AD processes will result in the registration of resolving domain names at the registry. Names reserved through the Sunrise B process will not result in resolving domain name at DOT Registry. Rather, these names will be reserved and blocked from live use. The applied for string will resolve to an informational page informing visitors that the name is unavailable for registration and reserved from use.

Applications that fit the following criteria will be considered during the Sunrise A period: Applicant owns and operates an existing domain name in another gTLD or ccTLD, in connection with eligible commerce and satisfies the registration requirements described in Section 1.

Sunrise B

Applications that fit the following criteria will be considered during the Sunrise B period:

- a) Applicant holds valid trademark registrations or owns rights to a particular name and wishes to block the use of such name.
- b) The Applicant must seek to block a name that corresponds to the entire text of its trademark or the complete textual component of a graphical or compound trademark. Certain variances are permitted for trademarks containing spaces or special characters that are not available for domain names.

Any entity, applying for blocks under Sunrise B as a non-member of the sponsored community cannot apply for names in the TLD.

Founder's Program

Applications for the Founder's Program will be accepted after the close of the Sunrise Periods. Potential registrants should understand that certain expectations, as described herein will accompany the issuance of a domain name under the Founder's Program and all registrations resulting from this program will be required to follow the below listed guidelines, which will be further described in their Program Agreement:

- a) Registrants awarded a domain through the Founder's Program must use their best efforts to launch a ".LLC" website within 30 days of signing the Program Agreement.
- b) In addition, each registrant will be required to issue a press release announcing the launch of their ".LLC" Founder Website, concurrent with the launch of their .LLC Founder Website, said press release must be approved by DOT Registry;
- c) Founder's websites should be kept good working order, with unique, meaningful content, user-friendly interfaces, and broad user appeal, for the duration of the License Term,
- d) Founders are expected to proactively market and promote ".LLC" gTLD in a manner that is likely to produce widespread awareness of the unique advantages gained through the ".LLC" string.
- e) Founders are expected to participate in reasonable joint marketing initiatives with DOT Registry or its Agents, these would be discussed and mutually agreed upon, given the unique circumstances of each marketing venture.

f) Founders will allow DOT Registry to use in good faith Founder's name, likeness, trademarks, logos, and Application contents (other than Confidential Information,) as well as other Founder information and content as may be mutually agreed, in DOT Registry's marketing, promotional and communications materials.

DOT Registry will randomly verify compliance of the above listed expectations and have the right to revoke any Founder's site, should they be deemed non-compliant.

Landrush

Landrush is a limited time opportunity for companies that want to secure a high value ".LLC" name for a small fee (above the basic registration cost). The landrush period will last 30 days. Applications will be accepted and evaluated to determine if they meet the requirements for registration. At the end of the Landrush period domain names with only one application will be awarded directly to the DOT Registry. Domain names with two or more applications will proceed to a closed mini auction, between the respective DOT Registries, where the highest bidder wins.

General Availability Period

DOT Registry must meet registration requirements.

Names will be awarded on a first-come, first serve basis which is determined as of the time of the initial request, not when authentication occurs.

Domain Name Contentions

Name contentions will arise when both a Sunrise A and Sunrise B application are submitted for the same name, the following actions will be taken to resolve the contention.

a) Both DOT Registries will be notified of the contention and the Sunrise A DOT Registry will be given first right to either register their requested domain or withdraw their application. Since ".LLC" is a sponsored community domain for registered Limited Liability Companies, a domain applied for under Sunrise A will, all else being equal, receive priority over the identical domain applied for under Sunrise B. Sunrise A names get priority over Sunrise B names.

b) If the Sunrise A DOT Registry chooses to register their name regardless of the contention, then the Sunrise B DOT Registry may choose to pursue further action independently of DOT Registry to contest the name.

c) If two Sunrise A DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet both seek to be awarded the use of DELTA.LLC) then DOT Registry will notify both DOT Registries of the contention and proceed to an auction process as described in Section 9.

d) If a Sunrise A DOT Registry and a Landrush DOT Registry apply for the same domain name, the Sunrise A DOT Registry, all else being equal will have priority over the Landrush DOT Registry.

e) If two Sunrise B DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet, both seek to block the use of DELTA. INC), then DOT Registry will accept both applications as valid and block the use of the indicated domain.

Appeal of Rejected Sunrise Applications

An DOT Registry can file a request for reconsideration within 10 days of the notification of DOT Registry's rejection. Reconsideration can be requested by completing a reconsideration form and filing a reconsideration fee with DOT Registry. Forms, fee information, and process documentation will be available on the DOT Registry website. Upon receipt of the reconsideration form and the corresponding fee, DOT Registry or its Agents will re-examine the application, and notify the Registrant of all findings or additional information needed. The Request for Reconsideration must be submitted through the Registrant's registrar, and a reconsideration fee must be paid to DOT Registry.

Auctions

GAC Advice Response Form for Applicants

Sunrise A names found to be in contention as described above will result in Auction. DOT Registry plans to have a qualified third party conduct our auction processes, therefore the rules contained in this document are subject to change based on the selection of an auctioneer:

a) When your auction account is created, it will be assigned a unique bidder alias in order to ensure confidential bidding. The bidder alias will not reflect any information about your account. You may change your bidder alias to a name of your choosing but once set, it cannot be changed again.

b) All auction participants are expected to keep their account information current, throughout the auction process.

c) Auction participants will receive up to date communication from the auctioneer as the auction progresses, bidding status changes, or issues arise.

d) Bidding

i) Auctions will follow a standard process flow: scheduled (upcoming), open and closed.

ii) You will receive an "Auction Scheduled" notice at least ten (10) days prior to the scheduled auction start date. You will receive an "Auction Start" notice on the auction start date, which will indicate that you may begin placing bids through the interface. Once closed, the auction is complete and if you are the winning bidder, you will proceed to the payment process.

iii) If you choose to bid for a particular domain and you are the highest bidder at the end of an auction, you are obligated to complete the transaction and pay the Auctioneer the amount of your winning bid. Carefully consider your bids prior to placing them - bids are not retractable under any circumstances.

iv) If no bids are placed on a particular domain, the Registry will register the domain on behalf of the first customer (in the respective phase) to submit an application through a registrar.

e) Extensions

i) A normal auction period is anticipated to last a minimum of 7 (seven) days. However, in the event of significant auction activity, an auction close may extend during the last twenty-four (24) hours of scheduled operation to better need the volume of the auction.

ii) Auction extensions are meant to provide a mechanism that is fair for bidders in all time zones to respond to being outbid.

iii) An auction extension will occur whenever the auction lead changes in the last twenty four (24) hours of the schedule of an auction. The close will be revised to reflect a new closing time set at twenty four (24) hours after the change in auction lead occurred. Essentially, this means that a winning maximum bid has to remain unchallenged for a period of twenty four (24) hours before the auction will close.

iv) It is important to note that extensions are not simply based on the auction value changing since this could occur as a result of proxy bidding where the same bidder retains their lead. In this case, the maximum bid has not changed, the leader has not changed and therefore no extension will occur.

f) Payment Default

In the event that you as the winning bidder decide not to honor your payment obligations (or in the event of a reversal of payment or a charge back by a credit card company or other payment provider) on any outstanding balance, the Registry has the right to cancel any/all of your winning registrations for any .LLC domain name, regardless of whether they have been paid for or not. You do not have the right to "pick and choose" the names you wish to keep or not keep. Winning an auction creates an obligation to remit payment. Failure to remit payment is a breach of your agreement.. You will lose any previously won domains and will no longer be allowed to bid on any current or future auctions sponsored by DOT Registry. Participants are encouraged therefore to consider carefully each bid submitted as any bid could be a winning bid.

Trademark Claims Service

DOT Registry will offer a Trademark Claims Service indefinitely to provide maximum protection and value to rights holders. The Trademark Claims Service will be monitored and operated by DOT Registry's RPM Team that will receive all communications regarding the Trademark Claims Service and catalog them. DOT Registry's registrar will review all domain name requests to determine if they are an identical match of a trademark filed with the Trademark Clearinghouse. A domain name will be considered an identical match when the domain name consists of the complete and identical textual elements of the mark, and includes domain names where (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) certain special characters contained within a trademark are spelled out with appropriate words describing it (e.g., @ and &); and (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name are either (i) omitted or (ii) replaced by spaces, hyphens or underscores. Domain names that are plural forms of a mark, or that merely contain a mark, will not qualify as an identical match.

If the registrar determines that a prospective domain name registration is identical to a mark registered in the Trademark Clearinghouse, the registrar will be required to email a "Trademark Claims Notice" (Notice) in English to the protective registrant of the domain name and copy DOT Registry's RPM Team. The Notice will provide the prospective registrant information regarding the trademark referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. The Notice will be provided in real time without cost to the prospective registrant.

After receiving the notice, the registrar will provide the prospective registrant five (5) days to reply to the Trademark Claims Service with a signed document that specifically warrants that: (i) the prospective registrant has received notification that the mark is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice. If the warranty document satisfies these requirements, the registrar will effectuate the registration and notify DOT Registry's RPM Team.

After the effectuation of a registration that is identical to a mark listed in the Trademark Clearinghouse, the registrar will provide clear notice to the trademark owner consisting of the domain name that has been registered and copy DOT Registry's RPM Team. The trademark owner then has the option of filing a Complaint under the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS).

Uniform Rapid Suspension System (URS)

DOT Registry will specify in the Registry Agreement, all RRAs, and all Registration Agreements used in connection with the TLD that it and its registrars will abide by all decisions made by panels in accordance with the Uniform Rapid Suspension System (URS). DOT Registry's RPM Team will receive all URS Complaints and decisions, and will notify its registrar to suspend all registrations determined by a URS panel to be infringing within a commercially reasonable time of receiving the decision. DOT Registry's RPM Team will catalog all abuse communications, but

GAC Advice Response Form for Applicants

only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Uniform Domain Name Dispute Resolution Policy (UDRP)

DOT Registry will specify in the Registry Agreement, all Registry-Registrar Agreements, and Registration Agreements used in connection with the TLD that it will promptly abide by all decisions made by panels in accordance with the Uniform Domain Name Dispute Resolution Policy (UDRP). DOT Registry's RPM Team will receive all UDRP Complaints and decisions, and will notify its registrar to cancel or transfer all registrations determined to be infringing within ten (10) business days of receiving the decision. DOT Registry's [RPM Team] will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Proven Registrars

In order to reduce abusive registrations and other activities that affect the legal rights of others, DOT Registry will only contract with ICANN-accredited registrars. The registrar, according to the RRA, will not be able to register any domain names, thus eliminating the possibility of front-running.

Pre-Authorization and Authentication

Registrant authentication shall occur in accordance with the registration eligibility criteria and the Anti-Abuse Policy for .LLC as set forth in Question 28.

The verification process is designed to prevent a prospective registrant from providing inaccurate or incomplete data, such that, if necessary, the registrant can be readily contacted regarding an infringing use of its site; indeed, the process (including verification of a registrant's certificate of incorporation) is designed to ensure that only qualified members of the community are permitted to register in the TLD.

DOT Registry will not permit registrants to use proxy services.

Thick Whois

DOT Registry will include a thick Whois database as required in Specification 4 of the Registry agreement. A thick Whois provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

Grace Period

If a Registrant previously awarded a ".LLC" domain is dissolved and/or forfeited for any reason, then such ".LLC" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

GAC Advice Response Form for Applicants

If a Registrant previously awarded the “.LLC” domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such “.LLC” will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

Takedown Procedure

DOT Registry will provide a Takedown Procedure modeled after the Digital Millennium Copyright Act’s notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LLC contact information for receiving rights protection complaints (Complaint) from rights holders, including but not limited to trademark and copyright Complaints. Complaints will be addressed to and received by DOT Registry’s RPM Team who will catalogue and ticket in DOT Registry’s CRM software and review as outlined herein. DOT Registry will catalog all rights protection communications and only provide them to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any Complaint from a rights holder will be relayed to DOT Registry’s RPM Team. A member of DOT Registry’s RPM Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email, and that DOT Registry will notify the Complainant of the results of the Complaint within (10) days of receiving the Complaint.

After sending the confirmation email, DOT Registry’s RPM Team will review the Complaint. If DOT Registry or its registrar determines that the registration was in bad faith, DOT Registry or its registrar may cancel or suspend the resolution of the domain name. Bad faith registration includes, but is not limited to, the registration of a domain identical to a registered trademark where the registrant has proceeded with registration after receipt of a Clearinghouse notice, as described above.

If the registrant responds within ten (10) business days, its response will be reviewed by the DOT Registry’s RPM Team. If DOT Registry’s RPM Team is satisfied by the registrant’s response that the content has been taken down or is not infringing, DOT Registry’s RPM Team will unsuspend the domain name. DOT Registry’s RPM Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the registrant does not respond within ten (10) business days, DOT Registry or its registrar may cancel or suspend the resolution of the domain name.

This Takedown Procedure will not prejudice any party’s election to pursue another dispute mechanism, such as URS or UDRP, as set forth in DOT Registry’s response to Question 28.

Further, Dot Registry has worked diligently to secure a strong relationship with the National Association of Secretaries of State (NASS) in order to accurately depict the necessary registration policies and programs that will protect the Community of Registered Limited Liability Companies. NASS was established in 1904 and is deemed the oldest non-partisan organization for public officials. Its membership consists of Secretaries of State and Lieutenant

GAC Advice Response Form for Applicants

Governors responsible for the registration and maintenance of Limited Liability Companies in the US and its territories. Dot Registry has pledged to consult NASS throughout the life of the gTLD in regards to any changing state statutes, community admittance criteria, or policy adaptations in order to stay abridged of any changing state laws or registration guidelines. Additionally, Dot Registry is the only applicant who has established a relationship with the NASS or any Secretary of States Offices. As seen in our application and attached to this response the careful management of the .LLC gTLD is of vital importance to the Secretaries of State in the US. Dot Registry believes that the level of security necessary to responsibly operate this string can only be accomplished through a community gTLD. Further, Dot Registry is able to clearly define the registrants of this community, admittance requirements, commonality and has secured significant support from current members of the community. Further support of these assumptions can be seen in the attachments to question 20 of Dot Registry's application.

Los Angeles, CA 90094-2536

Subject: Letter of Support for the Restricted Use of the Top Level
Domains, ".INC", ".LLC", ".CORP", and ".LLP"

To Whom It May Concern,

This letter confirms that the Tennessee Secretary of State's Office is charged with registering businesses in the State of Tennessee. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses, which can be further divided into the following designations: The Community of Registered Corporations, the Community of Registered Limited Liability Companies and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With growing national concern about fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their respective Secretary of State's Office.

Sincerely,

A handwritten signature in blue ink, appearing to read "Tre Hargett".

ROSS MILLER
Secretary of State

March 8, 2013

Internet Corporation of Assigned Names and Numbers
12025 Waterfront Drive, Suite 300
Los Angeles CA 90094-2536

RE: Restricted Use of Domains using .inc, .llc, .corp and .llp

TO WHOM IT MAY CONCERN;

My office is responsible for processing the organizational, amendatory and annual filings for Nevada corporations, limited liability companies, limited partnerships and other statutory business entities. These entities do business as Nevada entities not only in Nevada, but throughout the U.S. and around the world. My office is the second most popular business entity filing jurisdiction in the country, behind Delaware.

Fraudulent use of corporate entities, business identity theft and consumer protection are of growing concern to me, as is the potential of abuse by those offering online services. The free and unregulated issuance of names using these extensions is also a concern because of possible confusion or deception caused by entities that are not properly registered in my office.

It is my understanding that DOT Registry, LLC has applied to you for the use of the domain names with these extensions. I believe that restrictions and policies must be crafted not only to protect Nevada and U.S. entities, but also the consumers utilizing the associated web sites. I also understand that DOT Registry, LLC's application may include provisions protecting entities on file with my office, other Secretaries of State and state filing offices. Regardless of the applicant, such restrictions and protections must be in place.

I remain available if I can be of further assistance.

Respectfully,

A handwritten signature in blue ink that reads "Ross Miller".

Subject: Letter of support for the Restricted Use of the Top Level Domains, ".INC"
and ".LLC"

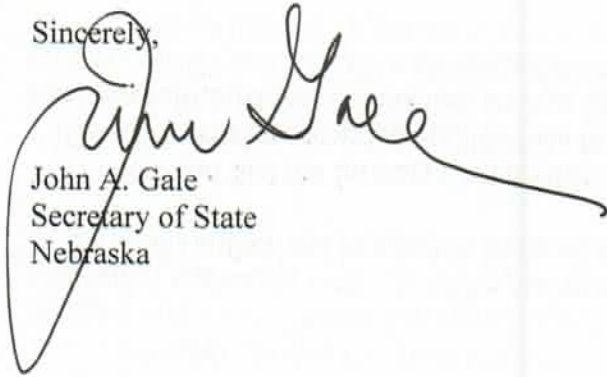

Ladies and Gentlemen:

This letter confirms that the State of Nebraska, Office of the Secretary of State, is charged with administering Nebraska's database of registered business entities. The companies registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with the Secretary of State.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a secretary of state or equivalent agency. It is important that registry companies provide access to the information provided by registered companies for jurisdictional purposes. Our office believes that such restrictions are integral to these strings and will object to the use of the strings, ".INC" and ".LLC" without any restrictions.

Sincerely,

John A. Gale

Dear Mr. Spurgeon,

I will not replicate the "form" letter on my letterhead that you requested for my signature in your e-mail message that I received today. It is not in a format or text that is comfortable for me.

However, because of my concern with the possible approval by ICANN of these extensions, I am willing to provide you with the enclosed letter. You may use it, as you deem appropriate.

By the way, NASS has not yet approved a letter, as referenced in your message. Although it was circulated through the membership of the Business Services Committee, the Executive Committee has not yet given final approval to the letter.

If Bill Clark or you have any questions or concerns about my letter, you are certainly welcomed to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

BISMARCK ND 58505-0500

March 23, 2012

Internet Corporation for Assigned Names and Numbers
1101 New York Avenue NW Suite 930
Washington DC 20005

To Whom It May Concern:

As the Secretary of State, I have the administrative oversight of various business entity registrations filed in my state.

It is my understanding that your organization (ICANN) is now accepting applications for a new expanded top level domain name program. I have learned that extensions such as .INC, .LLC, .LLP, and .CORP may be under consideration and that is of significant concern to me.

If ICANN considers approving these extensions, I respectfully request that they be approved and awarded to a company that has submitted an application that includes restrictions they will abide by, which would provide all of the possible protection for legitimate businesses and consumers from confusion or fraud.

All of these mentioned extensions are recognized under North Dakota state law as a means of identifying various types of business entities that are legally filed with my office. Therefore, it is important to ensure that the website domain name being considered for a business entity is only extended to a business entity that has a corresponding legal registration identified with that domain name. These business entities, with their registration, have lawfully earned the right to use these entity identifiers. That right should not be infringed about by any company or individual that has not obtained the legal use of them through the registration process in one of the states.

Therefore, along with my fellow members of the National Association of Secretaries of State (NASS), I am of the opinion that these extension identifiers should only be extended to entities in their respective states that are legally and appropriately registered with the Secretary of State, or the equivalent state agency.

During the past several months, the NASS Business Services Committee (of which I am a member) has been considering the proposed ICANN program and has been reviewing the potential impact these new extensions would have on existing businesses and new businesses registering with the various states.

As one member of the committee, I believe it is fundamental that NASS be consulted by companies such as DOT Registry or any other applicants regarding policy related to the registering and identifying of businesses as this expanded program is considered by ICANN. And, if ICANN approves these extensions, the successful recipient will agree to extend the new extensions only to a "community" of businesses appropriately and legally registered in one of the various states.

Without having appropriate restrictions in place, I would strongly oppose approving these extensions and awarding them to any company.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

Department of the Secretary of State

ELAINE F. MARSHALL
SECRETARY OF STATE

February 13, 2012

Dot Registry
208 W 19th St
Kansas City, MO 64108

Dear Ladies and Gentlemen:

This letter advises that the Department of the Secretary of State of North Carolina is charged with overseeing the business formation process for the formation of corporations, limited liability companies (LLCs), non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of North Carolina's database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (ICANN) will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with their state's administrator.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a Secretary of State or equivalent agency. I believe that entities not appropriately registered and maintained in any state should be prohibited from strings that would misrepresent their existence. As most Secretaries of State are not equipped to verify legitimate entity existence, even though we maintain that information, the verification process should be a requirement, albeit not ours.

Sincerely,

A handwritten signature in cursive script that reads "Elaine F. Marshall".

To Whom It May Concern:

As Delaware's Secretary of State, I administer the State's company registry and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities, such as corporations and limited liability companies, (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 63% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies around the world.

I understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new generic Top Level Domain (gTLD) name extensions this year. I have been informed that at least one firm – DOT Registry LLC – and possibly several other firms, plan to apply for the strings ".INC", ".CORP", ".LLC" and other potentially related extensions that state registries define as "company endings".

I join a chorus of federal and state officials who urge ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse. As such, it is absolutely critical that if ICANN determines to grant such name extensions, that it does so in a restricted manner that is intended to protect consumers and the community of interest that exists among validly registered U.S. companies and my fellow State secretaries of state and other State company registrars that are responsible for administering the nation's legal entity registration system.

ICANN – gTLD program
March 20, 2012

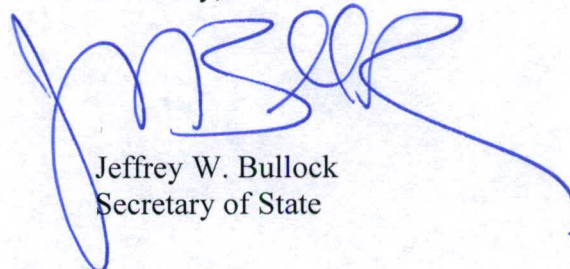

I therefore request that ICANN reject any request for the unrestricted use of “.INC”, “.LLC”, “.LLP”, “.CORP”, “.BANK”, “.TRUST” or similar commonly used company endings in the United States. The State of Delaware will object to the granting of such strings without restrictions.

I further request that, at a minimum, any approval for company ending strings be restricted in such a way that reasonably assures that the legal entity is, in fact, an active and validly registered legal entity in the United States, as DOT Registry LLC has proposed within its application. Specifically, any firm awarded the responsibility of administering such strings should be required to confirm whether the legal entity is validly formed according to criteria and documentation established by the states, and be required to check annually at renewal that the entity remains validly registered and actively in good standing according to criteria and documentation established by the states. The restrictions should further require that the homepage of such websites provide a mechanism that provides for the disclosure of the jurisdiction in which the entity is legally domiciled or include a geographic tag within the website name.

In order to reduce the risk of fraudulent activity, Delaware law places additional restrictions on the use of words such as “bank” and “trust” that are commonly associated with financial institutions. I therefore urge ICANN to seriously consider comment letters that have been submitted by the American Bankers Association and others urging ICANN to reject or place very significant restrictions on applications for the use of name extensions such as “.BANK” and “.TRUST”.

If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration of this request.

Sincerely,

Jeffrey W. Bullock
Secretary of State

Washington, DC 20230
SRadell@ntia.doc.gov

Dear Ms. Dryden and Ms. Radell:

As Delaware's Secretary of State, I administer the State's company registry, and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities such as corporations and limited liability companies (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 64% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies in North America and around the world.

In March of 2012, I imparted my concerns about ICANN's application review process for generic Top Level Domain (gTLDs) name extensions defined by state and provincial registries as "company endings". Such company endings include, but are not limited to, ".INC", ".CORP", ".LLP", ".LTD", ".GMBH", ".COMPANY" and "LLC". At that time, I joined a chorus of federal and state officials in the United States who had urged ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse.

Since expressing my initial concerns, I have followed the application and early warning process closely. More recently, I've learned of ICANN's new "Public Interest Commitments" (PIC) process and its associated "Public Interest Commitment Dispute Resolution Process" (PICDRS). Having the benefit of ICANN's response to my initial concerns and having reviewed the applications that have been submitted, I have no confidence that ICANN is interested in or capable of putting a system of clear and transparent enforcement mechanisms in place to ensure that "company endings" are not used for fraudulent or misleading purposes.

The responses I have received from ICANN and others have failed to acknowledge in any way the complex public policy questions raised by allowing gTLDs that use company endings. Instead, the responses have focused entirely on the process for filing objections to applications. The singular focus on an approval process rather than recognizing the serious policy implications associated with its granting of certain gTLDs calls into question whether ICANN is capable of evaluating, instituting and enforcing meaningful measures to protect consumers and legitimate legal entities from fraud and abuse.

Over 30 applications were submitted for various company endings, and while some of the applications include a proposed verification process, many do not. Only one applicant sought any input whatsoever from the affected community in my state and nationally. So it is no surprise that applicants that did propose a verification system failed to propose systems with enforceable mechanisms for safeguarding consumers, the public at large, state regulators, and the Internet itself from the types of fraud and abuse that are likely to occur in the absence of specific safeguards.

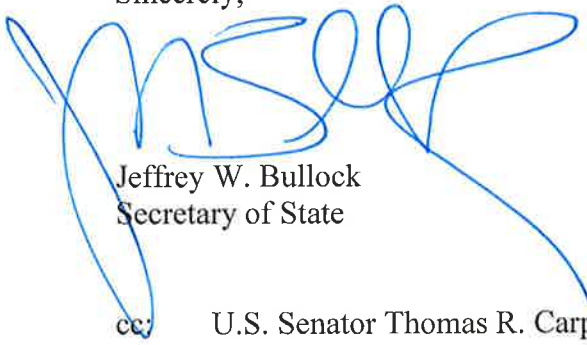

At this stage of the gTLDs process, I continue to believe that the public is best served if these company endings are not made available for use. I do not see an overriding public policy purpose or strong business case for ICANN to make them available – especially when hundreds of additional gTLDs are soon to become available.

It is also clear to me that any enforcement mechanism administered through ICANN is unlikely to provide the appropriate level of ongoing enforcement over the use of these sensitive gTLDs. The new PICDRS process, while no doubt well-intentioned, requires constant vigilance by the impacted community of company registrars. Not awarding these gTLDs is the preferred alternative. However, if such gTLDs are to be awarded and if there is going to be an effective and real-time enforcement mechanism, it must originate from the community with the greatest interest – namely, the company registrar

community represented in North America by organizations such as the International Association of Commercial Administrators (IACA) and the National Association of Secretaries of States (NASS) or in the case of non-U.S. endings such as .GMBH and .LTD with similar registrar communities elsewhere.

I am pleased to share these concerns and recommendations with you and I would welcome the opportunity to discuss them in greater detail. I am hoping that the GAC may be the appropriate vehicle for blocking the award of such gTLDs and assuring that adequate protections for consumers and businesses are put in place. If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration.

Sincerely,

Jeffrey W. Bullock
Secretary of State

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dot Registry, LLC
Application ID	1-880-35508
Applied for TLD (string)	.LLP

Response:

As the only community applicant for the .LLP extension, Dot Registry, .LLP is acutely aware of the need for safeguards and registration policies that will ensure the long term integrity of the .LLP gTLD for both registrants and consumers.

Dot Registry’s mission of building confidence, trust, reliance and loyalty for consumers and business owners alike; by creating a dedicated gTLD to specifically serve the Community of Registered Limited Liability Partnerships is supported through their registry service, registration policies, dispute resolution processes, and ICANN required rights protection mechanisms. Dot Registry will foster consumer peace of mind with confidence. By ensuring that all domains bearing our gTLD string are members of the Registered Community of US Limited Liability Partnerships. Our verification process will create an unprecedented level of security for online consumers by authenticating each of our registrant’s right to conduct business in the United States. The “.LLP” gTLD will fill a unique void in the current DNS and assist in decreasing the burden on existing domain names, by identifying members of the Registered Community of Limited Liability Partnerships.

The social implications of business identity theft and consumer confusion are a paramount concern to DOT Registry. In our currently unstable economy, stimulating economic growth is vital. One means to such growth is by defusing the rampant, legitimate fear caused by online crimes and abuse, which leads to curtailed consumer behavior. By introducing the “.LLP” domain into the DNS, DOT Registry will attempt to reduce the social impact of identity theft on business owners which will in turn reduce consumer fears related to spending and ultimately boost economic growth in regards to consumption and purchase power.

Dot Registry’s application currently contains the following registration policies and naming conventions, which directly address the concerns listed by GAC in their April 11th advice (the below excerpts are pulled directly from our application response to question 18):

GAC Advice Response Form for Applicants

- 1) A Registrant will only be awarded the “.LLP” domain that matches or includes a substantial part of the Registrant’s legal name. For example, Blue Star Partners, .LLP. would be able to purchase either BlueStarPartners.LLP or BlueStar.LLP.
- 2) Registrants will not be allowed to register product line registrations, regardless of the products affiliation to the corporation. All awarded domains must match or include a substantial part of the Registrant’s legal name.
- 3) If there are registrants applying for the same domain names, which correspond to their legal business names as registered in different states, then the “.LLP” domain will be awarded on a first-come, first-served basis to the first registrant.
- 4) However, if a registrant has a trademark registered with the United States Patent and Trademark Office (USPTO), then such registrant will have priority over any other registrant to be awarded the applied for “.LLP” domain.
- 5) If a registrant’s “.LLP” domain has already been awarded to another registrant with the same or similar legal name, then DOT Registry will offer to award such registrant a “.LLP” domain with a distinctive denominator including but not limited to a tag, company describer, or name abbreviation. For example, if BlueStar.LLP was awarded to Blue Star Partners, Inc. of California, then Blue Star Partners, Inc. of Kansas would be offered the opportunity to use BlueStarPartners.LLP.
- 6) DOT Registry will work closely with the Secretary of State’s Offices throughout the United States, with NASS and with a number of other agencies and organizations in maintaining the integrity and security of its domain names. DOT Registry will utilize the Secretary of States’ online resources to confirm that companies applying for their “.LLP” domain are in fact registered businesses.
- 7) All registrants that are awarded the “.LLP” domain will agree to a one-year minimum contract for their domain names that will automatically renew for an additional year on an annual basis if such contract is not terminated prior to the expiration of the renewal date.
- 8) DOT Registry or it’s designated agent will annually verify each registrants community status. Verification will occur in a process similar to the original registration process for each registrant, in which the registrars will verify each registrant’s “Active” Status with the applicable state authority. Each registrar will evaluate whether its registrants can still be considered “Active” members of the Community of Registered Limited Liability Partnerships. In this regard, the following items would be considered violations of DOT Registry’s Registration Guidelines, and may result in dissolution of a registrant’s awarded “.LLP” domain:
 - (a) If a registrant previously awarded the “.LLP” domain ceases to be registered with the State.
 - (b) If a registrant previously awarded a “.LLP” domain is dissolved and/or forfeits the domain for any reason.
 - (c) If a registrant previously awarded the “.LLP” domain is administratively dissolved by the State.Any registrant found to be “Inactive,” or which falls into scenarios (a) through (c) above, will be issued a probationary warning by their registrar, allowing for the registrant to restore its active status or resolve its dissolution with its applicable Secretary of State’s office. If the registrant is unable to restore itself to “Active” status within the defined probationary period, their previously assigned “.LLP” will be forfeited. DOT Registry reserves the right to change the definition of “Active” in accordance with the policies of the Secretaries of State. Domains will be temporarily suspended during the review process.
- 9) If DOT Registry discovers that a registrant wrongfully applied for and was awarded a “.LLP” domain, then such “.LLP” will be immediately forfeited to DOT Registry. Wrongful

application includes but is not limited to: a registrant misrepresenting itself as a member of the Community of Registered Limited Liability Partnerships, a registrant participating in illegal or fraudulent actions, or where a registrant would be in violation of our abuse policies described in Question 28 (including promoting or facilitating spam, trademark or copyright infringement, phishing, pharming, willful distribution of malware, fast flux hosting, botnet command and control, distribution of pornography, illegal access to other computers or networks, and domain kiting/tasting).

10) In the case of domain forfeiture due to any of the above described options, all payments received by the Registrant for registration services to date or in advance payment will be non-refundable.

11) All registration information will be made publicly available. DOT Registry will not accept blind registration or registration by proxy. DOT Registry's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement. Additionally, DOT Registry will provide a Web-based WHOIS application, which will be located at www.whois.LLP. The WHOIS Web application will be an intuitive and easy to use application which will allow the general public to easily access registration information for each ".LLP" site. A complete description of these services can be found in Question 26 below.

12) Awarded names are non-transferrable to entities outside of the designated community, regardless of affiliation to any member of the community. In the event that a registrant's business entity merges, is acquired, or sold, the new entity will be allowed to maintain the previously awarded ".LLP" domain until the domain renewal date, at which point they will be evaluated as described in number seven (7) above. Further, any entity acquiring a ".LLP" domain through the processes described in this guideline that does not meet the registration criteria and wishes to maintain the awarded domain will be allowed a grace period after the renewal verification process to correct any non-compliance issues in order to continue operating their acquired domain. If the said entity is unable to comply with DOT Registry's guidelines, the awarded domain will be revoked.

13) If an application is unable to be verified or does not meet the requirements of the sponsored community, the application will be considered invalid. In addition to Applicant's comprehensive eligibility, verification, and policing mechanisms, DOT Registry will implement a series of Rights Protection Mechanisms (RPM), including but not limited to: Support for and interaction with the Trademark Clearinghouse ("Clearinghouse"); use of the Trademark Claims Service; segmented Sunrise Periods allowing for the owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks; subsequent Sunrise Periods to give trademark owners or registrants that own the rights to a particular name the ability to block the use of such name; and stringent take down policies and all required dispute resolution policies. Dot Registry's dispute resolution processes, rights protection mechanisms, trademark clearing house procedures and whois verification information are further supported in their application in the following sections:

Question 22

Protection of Geographic Names at the Second Level of your proposed gTLD

Applicant has thoroughly reviewed ISO 3166-1 and ISO 3166-2, relevant UN documents on the standardization of geographic names, GAC correspondence relating to the reservation of geographic names in the .INFO TLD, and understands its obligations under Specification 5 of the

draft Registry Agreement. Applicant shall implement measures similar to those used to protect geographic names in the .INFO TLD by reserving and registering to itself all the geographic place names found in ISO-3166 and official country names as specified by the UN. Applicant has already discussed this proposed measure of protecting geographic names with its registry services provider, Neustar, and has arranged for such reservation to occur as soon after delegation as is technically possible.

Question 26

Whols Compliance

As with the .INFO TLD, only if a potential second-level domain registrant makes a proper showing of governmental support for country or territorial names will Applicant then relay this request to ICANN. At this point, Applicant would wait for the approval of the GAC and of ICANN before proceeding to delegate the domain at issue.

Applicant recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders, and the public as a whole, and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement and relevant RFCs.

Applicant's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs, and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, the WHOIS service provided by Applicant's registry services operator has been designed from the ground up to display as much information as required by ICANN and respond to a very stringent availability and performance requirement.

Some of the key features of Applicant's WHOIS services will include:

- Fully compliant with all relevant RFCs including 3912;
- Production proven, highly flexible, and scalable (applicant's back-end registry services provider has a track record of 100% availability over the past 10 years);
- Exceeds current and proposed performance specifications;
- Supports dynamic updates with the capability of doing bulk updates;
- Geographically distributed sites to provide greater stability and performance; and
- Search capabilities (e.g., IDN, registrant data) that mitigate potential forms of abuse as discussed below.

Applicant's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

Applicant's WHOIS service will support port 43 queries, and will be optimized for speed using an in-memory database and a master-slave architecture between SRS and WHOIS slaves. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Applicant's registry services operator currently processes millions of WHOIS queries per day.

GAC Advice Response Form for Applicants

In addition to the WHOIS Service on port 43, Applicant will provide a Web-based WHOIS application, which will be located at www.whois.LLP. This WHOIS Web application will be an intuitive and easy to use application for the general public to use. The WHOIS Web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

The WHOIS web application will also provide features not available on the port 43 service. These include:

- Extensive support for international domain names (IDN)
- Ability to perform WHOIS lookups on the actual Unicode IDN
- Display of the actual Unicode IDN in addition to the ACE-encoded name
- A Unicode to Punycode and Punycode to Unicode translator
- An extensive FAQ
- A list of upcoming domain deletions

Applicant will also provide a searchable web-based WHOIS service in accordance with Specification 4 Section 1.8 The application will enable users to search the WHOIS directory to find exact or partial matches using any one or more of the following fields:

- Domain name
- Contacts and registrant's name
- Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)
- Registrar ID
- Name server name and IP address
- Internet Protocol addresses
- The system will also allow search using non-Latin character sets which are compliant with IDNA specification

The WHOIS user will be able to choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria and their WHOIS information will quickly be returned to the user.

In order to reduce abuse for this feature, only authorized users will have access to the Whois search features after providing a username and password.

Applicant will provide third party access to the bulk zone file in accordance with Specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider, which will make access to the zone files in bulk via FTP to any person or organization that signs and abides by a Zone File Access (ZFA) Agreement with the registry. Contracted gTLD registries will provide this access daily and at no charge.

Applicant will also provide ICANN and any emergency operators with up-to-date Registration Data on a weekly basis (the day to be designated by ICANN). Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, unless ICANN requests other means in the future. Applicant's Legal Team will regularly monitor the registry service provider to ensure that they are providing the services as described above. This will entail random monthly testing of the WHOIS port 43 and Web-based services to ensure that they meet the ICANN Specifications and

GAC Advice Response Form for Applicants

RFCs as outlined above, if not, to follow up with the registry services provider to ensure that they do. As the relevant WHOIS will only contain Applicant's information, Applicant's WHOIS services will necessarily be in compliance with any applicable privacy laws or

Question 28

Abuse Prevention and Mitigation

General Statement of Policy

Abuse within the registry will not be tolerated. DOT Registry will implement very strict policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. DOT Registry's homepages will provide clear contact information for its Abuse Team, and in accordance with ICANN policy DOT Registry shall host NIC.LLP, providing access to .LLP's WhoIs services, the Abuse Policy, and contact information for the Abuse Team.

Anti-Abuse Policy

DOT Registry will implement in its internal policies and its Registry-Registrar Agreements (RRAs) that all registered domain names in the TLD will be subject to a Domain Name Anti-Abuse Policy ("Abuse Policy").

The Abuse Policy will provide DOT Registry with broad power to suspend, cancel, or transfer domain names that violate the Abuse Policy. DOT Registry will publish the Abuse Policy on its home website at NIC.LLP and clearly provide DOT Registry's Point of Contact ("Abuse Contact") and its contact information. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of abuse complaints, and a telephone number and mailing address for the primary contact. DOT Registry will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made.

In addition, with respect to inquiries from ICANN-Accredited registrars, the Abuse Contact shall handle requests related to abusive domain name practices.

Inquiries addressed to the Abuse Contact will be routed to DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy as described in more detail below. DOT Registry will catalog all abuse communications in its CRM software using a ticketing system that maintains records of all abuse complaints indefinitely. Moreover, DOT Registry shall only provide access to these records to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

The Abuse Policy will state, at a minimum, that DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to ; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Registry, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, registry services provider, or any registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant's

GAC Advice Response Form for Applicants

pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.

The Abuse Policy will define the abusive use of domain names to include, but not be limited to, the following activities:

- **Illegal or fraudulent actions:** use of the DOT Registry's or Registrar's services to violate the laws or regulations of any country, state, or infringe upon the laws of any other jurisdiction, or in a manner that adversely affects the legal rights of any other person;
- **Spam:** use of electronic messaging systems from email addresses from domains in the TLD to send unsolicited bulk messages. The term applies to e-mail spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of Web sites and Internet forums;
- **Trademark and Copyright Infringement:** DOT Registry will take great care to ensure that trademark and copyright infringement does not occur within the .LLP TLD. DOT Registry will employ notice and takedown procedures based on the provisions of the Digital Millennium Copyright Act (DMCA) ;
- **Phishing:** use of counterfeit Web pages within the TLD that are designed to trick recipients into divulging sensitive data such as usernames, passwords, or financial data;
- **Pharming:** redirecting of unknowing users to fraudulent Web sites or services, typically through DNS hijacking or poisoning;
- **Willful distribution of malware:** dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and trojan horses.
- **Fast flux hosting:** use of fast-flux techniques to disguise the location of Web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities. Fast-flux techniques use DNS to frequently change the location on the Internet to which the domain name of an Internet host or name server resolves. Fast flux hosting may be used only with prior permission of DOT Registry;
- **Botnet command and control:** services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct denial-of-service attacks (DDoS attacks);
- **Distribution of pornography;**
- **Illegal Access to Other Computers or Networks:** illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity);
- **Domain Kiting/Tasting:** registration of domain names to test their commercial viability before returning them during a Grace Period;
- **High Volume Registrations/Surveying:** registration of multiple domain names in order to warehouse them for sale or pay-per-click websites in a way that can impede DOT Registry from offering them to legitimate users or timely services to other subscribers;
- **Geographic Name:** registering a domain name that is identical to a Geographic Name, as defined by Specification 5 of the Registry Agreement;
- **Inadequate Security:** registering and using a domain name to host a website that collects third-party information but does not employ adequate security measures to protect

GAC Advice Response Form for Applicants

third-party information in accordance with that geographic area's data and financial privacy laws;

- Front Running: registrars mining their own web and Whois traffic to obtain insider information with regard to high-value second-level domains, which the registrar will then register to itself or an affiliated third party for sale or to generate advertising revenue;
- Whois Accuracy: Intentionally inserting false or misleading Registrant information into the TLD's Whois database in connection with the bad faith registration and use of the domain in question;
- Whois Misuse: abusing access to the Whois database by using Registrant information for data mining purposes or other malicious purposes;
- Fake Renewal Notices; misusing Whois Registrant information to send bogus renewal notices to Registrants on file with the aim of causing the Registrant to spend unnecessary money or steal or redirect the domain at issue.

Domain Anti-Abuse Procedure

DOT Registry will provide a domain name anti-abuse procedure modeled after the DMCA's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LLP the Abuse Policy and the contact information for the Abuse Contact. Inquiries addressed to the Point of Contact will be addressed to and received by DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy. DOT Registry will catalog all abuse communications and provide them to third parties only under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any correspondence ("Complaint") from a complaining party ("Complainant") to the Abuse Contact will be ticketed in DOT Registry's CRM software and relayed to DOT Registry's Abuse Team. A member of DOT Registry's Abuse Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email and that DOT Registry will notify the Complainant of the results of the Complaint within ten (10) days of receiving the Complaint.

DOT Registry's Abuse Team will review the Complaint and give it a "quick look" to see if the Complaint reasonably falls within an abusive use as defined by the Abuse Policy. If not, the Contact will write an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated abusive uses as defined by the Abuse Policy and that DOT Registry considers the matter closed.

If the quick look does not resolve the matter, DOT Registry's Abuse Team will give the Complaint a full review. Any Registrant that has been determined to be in violation of DOT Registry policies shall be notified of the violation of such policy and their options to cure the violation. Such notification shall state:

- 1) the nature of the violation;
- 2) the proposed remedy to the violation;
- 3) the time frame to cure the violation; and

4) the Registry's options to take subsequent action if the Registrant does not cure the violation.

If an abusive use is determined DOT Registry's Abuse Team will alert it's Registry services team to immediately cancel the resolution of the domain name. DOT Registry's Abuse Team will immediately notify the Registrant of the suspension of the domain name, the nature of the complaint, and provide the Registrant with the option to respond within ten (10) days or the domain will be canceled.

If the Registrant responds within ten (10) business days, it's response will be reviewed by the DOT Registry's Abuse Team for further review. If DOT Registry's Abuse Team is satisfied by the Registrant's response that the use is not abusive, DOT Registry's Abuse Team will submit a request by the registry services provider to reactivate the domain name. DOT Registry's Abuse Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the Registrant does not respond within ten (10) business days, DOT Registry will notify the registry services team to cancel the abusive domain name.

This Anti-Abuse Procedure will not prejudice either party's election to pursue another dispute mechanism, such as URS or UDRP.

With the resources of DOT Registry's registry services personnel, DOT Registry can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one (1) business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, questions, or comments concerning the request, and an outline of the next steps to be taken by Application for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by DOT Registry and involves the type of activity set forth in the Abuse Policy, the sponsoring registrar is then given forty-eight (48) hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 48-hour period (i.e., is unresponsive to the request or refuses to take action), DOT Registry will place the domain on "serverHold".

Maintenance of Registration Criteria

If a Registrant previously awarded the ".LLP" domain ceases to be registered with a Secretary of State or legally applicable jurisdiction, such Registrant will be required to forfeit the assigned ".LLP" domain at their designated renewal date.

If DOT Registry discovers that a Registrant wrongfully applied for and was awarded a ".LLP" domain, then such ".LLP" will be immediately forfeited to DOT Registry.

If a Registrant previously awarded a ".LLP" domain is dissolved and/or forfeited for any reason, then such ".LLP" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".LLP" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".LLP" will be forfeited to DOT

GAC Advice Response Form for Applicants

Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

A Registrant's "Active" Status will be verified annually. Any Registrant not considered "Active" by the definition listed above in question 18 will be given a probationary warning, allowing time for the Registrant to restore itself to "Active" Status. If the Registrant is unable to restore itself to "Active" status within the defined probationary period, their previously assigned ".LLP" will be forfeited. In addition, DOT Registry's definition of "Active" may change in accordance with the policies of the Secretaries of State.

Orphan Glue Removal

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often supports correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in the DNS. Therefore, when DOT Registry has written evidence of actual abuse of orphaned glue, DOT Registry will take action to remove those records from the zone to mitigate such malicious conduct.

DOT Registry's registry service operator will run a daily audit of entries in its DNS systems and compare those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either DOT Registry or its registry services operator becomes aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

Whols Accuracy

DOT Registry will provide Whols accessibility in a reliable, consistent, and predictable fashion in order to promote Whois accuracy. The Registry will adhere to port 43 Whois Service Level Agreements (SLAs), which require that port 43 WHOIS service be highly accessible and fast.

DOT Registry will offer thick Whols services, in which all authoritative Whols data—including contact data—is maintained at the registry. DOT Registry will maintain timely, unrestricted, and public access to accurate and complete Whols information, including all data objects as specified in Specification 4. Moreover, prior to the release of any domain names, DOT Registry's registrar will provide DOT Registry with an authorization code to verify eligible Registrants provide accurate Registrant contact information.

In order to further promote Whois accuracy, DOT Registry will offer a mechanism whereby third parties can submit complaints directly to the DOT Registry (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete Whois data. Such information shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to cancel or suspend the applicable domain name(s) should DOT Registry determine that the domains are being used in a manner contrary to DOT Registry's abuse policy.

DOT Registry shall also require authentication and verification of all Registrant data. DOT Registry shall verify the certificates of incorporation, whether a corporation is in active status, contact information, e-mail address, and, to the best of its abilities, determine whether address information supplied is accurate. Second-level domains in the TLD shall not be operational unless two (2) out of three (3) of the above authentication methods have been satisfied.

With regard to registrars, DOT Registry shall provide financial incentives for pre-authentication of Registrant data prior to such data being passed to the registry. DOT Registry will provide for lower renewal and bulk registration fees in its RRAs for registrations which have been pre-authenticated and which DOT Registry can rely on as accurate data to be entered into its Whois database. Also in its RRAs, DOT Registry will also provide for higher fees and penalties for Registrant data which is obscured by proxies.

DOT Registry will also maintain historical databases of Registrants and associated information which have provided inaccurate Whois information. DOT Registry will endeavor to use this database to uncover patterns of suspicious registrations which DOT Registry shall then flag for further authentication or for review of the Registrant's use of the domain in question to ensure Registrant's use is consonant with DOT Registry's abuse policy.

In addition, DOT Registry's Abuse Team shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of domain names within the applied-for TLD to test the accuracy of the Whois information. Although this will not include verifying the actual information in the WHOIS record, DOT Registry will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, the DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to suspend the applicable domain name(s) should DOT Registry determine that the Registrant is using the domain in question in a manner contrary to DOT Registry's abuse policy. DOT Registry shall also reserve the right to report such recalcitrant registrar activities directly to ICANN.

GAC Advice Response Form for Applicants

All domain name Registrants will have adequate controls to ensure proper access to domain functions.

In addition to the above, all domain name Registrants in the applied-for TLD will be required to name at least two (2) unique points of contact who are authorized to request and/or approve update, transfer, and deletion requests. The points of contact must establish strong passwords with the registrar that must be authenticated before a point of contact will be allowed to process updates, transfer, and deletion requests. Once a process update, transfer, or deletion request is entered, the points of contact will automatically be notified when a domain has been updated, transferred, or deleted through an automated system run by DOT Registry's registrar. Authentication of modified Registrant information shall be accomplished 48 Hours.

Question 29

Rights Protection Mechanisms

DOT Registry is committed to implementing strong and integrated Rights Protection Mechanisms (RPM). Use of domain names that infringe upon the legal rights of others in the TLD will not be tolerated. The nature of such uses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. DOT Registry will protect the legal rights of others by implementing RPMs and anti-abuse policies backed by robust responsiveness to complaints and requirements of DOT Registry's registrars.

Trademark Clearinghouse

Each new gTLD Registry will be required to implement support for, and interaction with, the Trademark Clearinghouse ("Clearinghouse"). The Clearinghouse is intended to serve as a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. The data maintained in the Clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service.

Utilizing the Clearinghouse, all operators of new gTLDs must offer: (i) a Sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a Trademark Claims Service for at least the first 60 days that second-level registrations are open. The Trademark Claims Service is intended to provide clear notice to a potential registrant of the rights of a trademark owner whose trademark is registered in the Clearinghouse.

Sunrise A Period

DOT Registry will offer segmented Sunrise Periods. The initial Sunrise Period will last [minimum 30 days] for owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks. All domain names registered during the Sunrise Period will be subject to DOT Registry's domain name registration policy, namely, that all registrants be validly registered Limited Liability Partnerships and all applied-for domains will only be awarded the ".LLP" domain that matches or includes a substantial part of the Registrant's legal name. DOT Registry will assign its Rights Protection Team; which is lead by our

GAC Advice Response Form for Applicants

Director of Legal and Policy and further supported by two dedicated employees to receive and authenticate all Sunrise Registrations.

DOT Registry's registrar will ensure that all Sunrise Registrants meet sunrise eligibility requirements (SERs), which will be verified by Clearinghouse data. The proposed SERs include: (i) ownership of a mark that is (a) nationally or regionally registered and for which proof of use, such as a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (b) that have been court-validated; or (c) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008, (ii) optional registry elected requirements concerning international classes of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

Upon receipt of the Sunrise application, DOT Registry will issue a unique tracking number to the Registrar, which will correspond to that particular application. All applications will receive tracking numbers regardless of whether they are complete. Applications received during the Sunrise period will be accepted on a first-come, first-served basis and must be active Limited Liability Partnerships in good standing before they may be awarded the requested domain, or able to proceed to auction. Upon submission of all of the required information and documentation, registrar will forward the information to DOT Registry's [RPM Team] for authentication. DOT Registry's [RPM Team] will review the information and documentation and verify the trademark information, and notify the potential registrant of any deficiencies. If a registrant does not cure any trademark-related deficiencies and/or respond by the means listed within one (1) week, DOT Registry will notify its registrar and the domain name will be released for registration.

DOT Registry will incorporate a Sunrise Dispute Resolution Policy (SDRP). The SDRP will allow challenges to Sunrise Registrations by third parties for a ten-day period after acceptance of the registration based on the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national or regional effect or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

After receiving a Sunrise Complaint, DOT Registry's [RPM Team] will review the Complaint to see if the Complaint reasonably asserts a legitimate challenge as defined by the SDRP. If not, DOT Registry's [RPM Team] will send an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated grounds as defined by the SDRP and that DOT Registry considers the matter closed.

If the domain name is not found to have adequately met the SERs, DOT Registry's [RPM Team] will alert the registrar and registry services provider to immediately suspend the resolution of the domain name. Thereafter, DOT Registry's [RPM Team] will immediately notify the Sunrise Registrant of the suspension of the domain name, the nature of the complaint, and provide the

registrant with the option to respond within ten (10) days to cure the SER deficiencies or the domain name will be canceled.

If the registrant responds within ten (10) business days, its response will be reviewed by DOT Registry's [RPM Team] to determine if the SERs are met. If DOT Registry's [RPM Team] is satisfied by the registrant's response, DOT Registry's [RPM Team] will submit a request to the registrar and the registry services provider to unsuspend the domain name. DOT Registry's [RPM Team] will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial.

Names secured as described through the Sunrise AT/AD processes will result in the registration of resolving domain names at the registry. Names reserved through the Sunrise B process will not result in resolving domain name at DOT Registry. Rather, these names will be reserved and blocked from live use. The applied for string will resolve to an informational page informing visitors that the name is unavailable for registration and reserved from use.

Applications that fit the following criteria will be considered during the Sunrise A period: Applicant owns and operates an existing domain name in another gTLD or ccTLD, in connection with eligible commerce and satisfies the registration requirements described in Section 1.

Sunrise B

Applications that fit the following criteria will be considered during the Sunrise B period:

- a) Applicant holds valid trademark registrations or owns rights to a particular name and wishes to block the use of such name.
- b) The Applicant must seek to block a name that corresponds to the entire text of its trademark or the complete textual component of a graphical or compound trademark. Certain variances are permitted for trademarks containing spaces or special characters that are not available for domain names.

Any entity, applying for blocks under Sunrise B as a non-member of the sponsored community cannot apply for names in the TLD.

Founder's Program

Applications for the Founder's Program will be accepted after the close of the Sunrise Periods. Potential registrants should understand that certain expectations, as described herein will accompany the issuance of a domain name under the Founder's Program and all registrations resulting from this program will be required to follow the below listed guidelines, which will be further described in their Program Agreement:

- a) Registrants awarded a domain through the Founder's Program must use their best efforts to launch a ".LLP" website within 30 days of signing the Program Agreement.
- b) In addition, each registrant will be required to issue a press release announcing the launch of their ".LLP" Founder Website, concurrent with the launch of their .LLP Founder Website, said press release must be approved by DOT Registry;
- c) Founder's websites should be kept good working order, with unique, meaningful content, user-friendly interfaces, and broad user appeal, for the duration of the License Term,
- d) Founders are expected to proactively market and promote ".LLP" gTLD in a manner that is likely to produce widespread awareness of the unique advantages gained through the ".LLP" string.
- e) Founders are expected to participate in reasonable joint marketing initiatives with DOT Registry or its Agents, these would be discussed and mutually agreed upon, given the unique circumstances of each marketing venture.

f) Founders will allow DOT Registry to use in good faith Founder's name, likeness, trademarks, logos, and Application contents (other than Confidential Information,) as well as other Founder information and content as may be mutually agreed, in DOT Registry's marketing, promotional and communications materials.

DOT Registry will randomly verify compliance of the above listed expectations and have the right to revoke any Founder's site, should they be deemed non-compliant.

Landrush

Landrush is a limited time opportunity for companies that want to secure a high value ".LLP" name for a small fee (above the basic registration cost). The landrush period will last 30 days. Applications will be accepted and evaluated to determine if they meet the requirements for registration. At the end of the Landrush period domain names with only one application will be awarded directly to the DOT Registry. Domain names with two or more applications will proceed to a closed mini auction, between the respective DOT Registries, where the highest bidder wins.

General Availability Period

DOT Registry must meet registration requirements.

Names will be awarded on a first-come, first serve basis which is determined as of the time of the initial request, not when authentication occurs.

Domain Name Contentions

Name contentions will arise when both a Sunrise A and Sunrise B application are submitted for the same name, the following actions will be taken to resolve the contention.

a) Both DOT Registries will be notified of the contention and the Sunrise A DOT Registry will be given first right to either register their requested domain or withdraw their application. Since ".LLP" is a sponsored community domain for registered Limited Liability Partnerships, a domain applied for under Sunrise A will, all else being equal, receive priority over the identical domain applied for under Sunrise B. Sunrise A names get priority over Sunrise B names.

b) If the Sunrise A DOT Registry chooses to register their name regardless of the contention, then the Sunrise B DOT Registry may choose to pursue further action independently of DOT Registry to contest the name.

c) If two Sunrise A DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet both seek to be awarded the use of DELTA.LLP) then DOT Registry will notify both DOT Registries of the contention and proceed to an auction process as described in Section 9.

d) If a Sunrise A DOT Registry and a Landrush DOT Registry apply for the same domain name, the Sunrise A DOT Registry, all else being equal will have priority over the Landrush DOT Registry.

e) If two Sunrise B DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet, both seek to block the use of DELTA. INC), then DOT Registry will accept both applications as valid and block the use of the indicated domain.

Appeal of Rejected Sunrise Applications

An DOT Registry can file a request for reconsideration within 10 days of the notification of DOT Registry's rejection. Reconsideration can be requested by completing a reconsideration form and filing a reconsideration fee with DOT Registry. Forms, fee information, and process documentation will be available on the DOT Registry website. Upon receipt of the reconsideration form and the corresponding fee, DOT Registry or its Agents will re-examine the application, and notify the Registrant of all findings or additional information needed. The Request for Reconsideration must be submitted through the Registrant's registrar, and a reconsideration fee must be paid to DOT Registry.

Auctions

Sunrise A names found to be in contention as described above will result in Auction. DOT Registry plans to have a qualified third party conduct our auction processes, therefore the rules contained in this document are subject to change based on the selection of an auctioneer:

a) When your auction account is created, it will be assigned a unique bidder alias in order to ensure confidential bidding. The bidder alias will not reflect any information about your account. You may change your bidder alias to a name of your choosing but once set, it cannot be changed again.

b) All auction participants are expected to keep their account information current, throughout the auction process.

c) Auction participants will receive up to date communication from the auctioneer as the auction progresses, bidding status changes, or issues arise.

d) Bidding

i) Auctions will follow a standard process flow: scheduled (upcoming), open and closed.

ii) You will receive an "Auction Scheduled" notice at least ten (10) days prior to the scheduled auction start date. You will receive an "Auction Start" notice on the auction start date, which will indicate that you may begin placing bids through the interface. Once closed, the auction is complete and if you are the winning bidder, you will proceed to the payment process.

iii) If you choose to bid for a particular domain and you are the highest bidder at the end of an auction, you are obligated to complete the transaction and pay the Auctioneer the amount of your winning bid. Carefully consider your bids prior to placing them - bids are not retractable under any circumstances.

iv) If no bids are placed on a particular domain, the Registry will register the domain on behalf of the first customer (in the respective phase) to submit an application through a registrar.

e) Extensions

i) A normal auction period is anticipated to last a minimum of 7 (seven) days. However, in the event of significant auction activity, an auction close may extend during the last twenty-four (24) hours of scheduled operation to better need the volume of the auction.

ii) Auction extensions are meant to provide a mechanism that is fair for bidders in all time zones to respond to being outbid.

iii) An auction extension will occur whenever the auction lead changes in the last twenty four (24) hours of the schedule of an auction. The close will be revised to reflect a new closing time set at twenty four (24) hours after the change in auction lead occurred. Essentially, this means that a winning maximum bid has to remain unchallenged for a period of twenty four (24) hours before the auction will close.

iv) It is important to note that extensions are not simply based on the auction value changing since this could occur as a result of proxy bidding where the same bidder retains their lead. In this case, the maximum bid has not changed, the leader has not changed and therefore no extension will occur.

f) Payment Default

In the event that you as the winning bidder decide not to honor your payment obligations (or in the event of a reversal of payment or a charge back by a credit card company or other payment provider) on any outstanding balance, the Registry has the right to cancel any/all of your winning registrations for any .LLP domain name, regardless of whether they have been paid for or not. You do not have the right to "pick and choose" the names you wish to keep or not keep. Winning an auction creates an obligation to remit payment. Failure to remit payment is a breach of your agreement.. You will lose any previously won domains and will no longer be allowed to bid on any current or future auctions sponsored by DOT Registry. Participants are encouraged therefore to consider carefully each bid submitted as any bid could be a winning bid.

Trademark Claims Service

DOT Registry will offer a Trademark Claims Service indefinitely to provide maximum protection and value to rights holders. The Trademark Claims Service will be monitored and operated by DOT Registry's RPM Team that will receive all communications regarding the Trademark Claims Service and catalog them. DOT Registry's registrar will review all domain name requests to determine if they are an identical match of a trademark filed with the Trademark Clearinghouse. A domain name will be considered an identical match when the domain name consists of the complete and identical textual elements of the mark, and includes domain names where (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) certain special characters contained within a trademark are spelled out with appropriate words describing it (e.g., @ and &); and (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name are either (i) omitted or (ii) replaced by spaces, hyphens or underscores. Domain names that are plural forms of a mark, or that merely contain a mark, will not qualify as an identical match.

If the registrar determines that a prospective domain name registration is identical to a mark registered in the Trademark Clearinghouse, the registrar will be required to email a "Trademark Claims Notice" (Notice) in English to the protective registrant of the domain name and copy DOT Registry's RPM Team. The Notice will provide the prospective registrant information regarding the trademark referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. The Notice will be provided in real time without cost to the prospective registrant.

After receiving the notice, the registrar will provide the prospective registrant five (5) days to reply to the Trademark Claims Service with a signed document that specifically warrants that: (i) the prospective registrant has received notification that the mark is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice. If the warranty document satisfies these requirements, the registrar will effectuate the registration and notify DOT Registry's RPM Team.

After the effectuation of a registration that is identical to a mark listed in the Trademark Clearinghouse, the registrar will provide clear notice to the trademark owner consisting of the domain name that has been registered and copy DOT Registry's RPM Team. The trademark owner then has the option of filing a Complaint under the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS).

Uniform Rapid Suspension System (URS)

DOT Registry will specify in the Registry Agreement, all RRAs, and all Registration Agreements used in connection with the TLD that it and its registrars will abide by all decisions made by panels in accordance with the Uniform Rapid Suspension System (URS). DOT Registry's RPM Team will receive all URS Complaints and decisions, and will notify its registrar to suspend all registrations determined by a URS panel to be infringing within a commercially reasonable time of receiving the decision. DOT Registry's RPM Team will catalog all abuse communications, but

GAC Advice Response Form for Applicants

only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Uniform Domain Name Dispute Resolution Policy (UDRP)

DOT Registry will specify in the Registry Agreement, all Registry-Registrar Agreements, and Registration Agreements used in connection with the TLD that it will promptly abide by all decisions made by panels in accordance with the Uniform Domain Name Dispute Resolution Policy (UDRP). DOT Registry's RPM Team will receive all UDRP Complaints and decisions, and will notify its registrar to cancel or transfer all registrations determined to be infringing within ten (10) business days of receiving the decision. DOT Registry's [RPM Team] will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Proven Registrars

In order to reduce abusive registrations and other activities that affect the legal rights of others, DOT Registry will only contract with ICANN-accredited registrars. The registrar, according to the RRA, will not be able to register any domain names, thus eliminating the possibility of front-running.

Pre-Authorization and Authentication

Registrant authentication shall occur in accordance with the registration eligibility criteria and the Anti-Abuse Policy for .LLP as set forth in Question 28.

The verification process is designed to prevent a prospective registrant from providing inaccurate or incomplete data, such that, if necessary, the registrant can be readily contacted regarding an infringing use of its site; indeed, the process (including verification of a registrant's certificate of incorporation) is designed to ensure that only qualified members of the community are permitted to register in the TLD.

DOT Registry will not permit registrants to use proxy services.

Thick Whois

DOT Registry will include a thick Whois database as required in Specification 4 of the Registry agreement. A thick Whois provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

Grace Period

If a Registrant previously awarded a ".LLP" domain is dissolved and/or forfeited for any reason, then such ".LLP" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

GAC Advice Response Form for Applicants

If a Registrant previously awarded the “.LLP” domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such “.LLP” will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

Takedown Procedure

DOT Registry will provide a Takedown Procedure modeled after the Digital Millennium Copyright Act’s notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LLP contact information for receiving rights protection complaints (Complaint) from rights holders, including but not limited to trademark and copyright Complaints. Complaints will be addressed to and received by DOT Registry’s RPM Team who will catalogue and ticket in DOT Registry’s CRM software and review as outlined herein. DOT Registry will catalog all rights protection communications and only provide them to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any Complaint from a rights holder will be relayed to DOT Registry’s RPM Team. A member of DOT Registry’s RPM Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email, and that DOT Registry will notify the Complainant of the results of the Complaint within (10) days of receiving the Complaint.

After sending the confirmation email, DOT Registry’s RPM Team will review the Complaint. If DOT Registry or its registrar determines that the registration was in bad faith, DOT Registry or its registrar may cancel or suspend the resolution of the domain name. Bad faith registration includes, but is not limited to, the registration of a domain identical to a registered trademark where the registrant has proceeded with registration after receipt of a Clearinghouse notice, as described above.

If the registrant responds within ten (10) business days, its response will be reviewed by the DOT Registry’s RPM Team. If DOT Registry’s RPM Team is satisfied by the registrant’s response that the content has been taken down or is not infringing, DOT Registry’s RPM Team will unsuspend the domain name. DOT Registry’s RPM Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the registrant does not respond within ten (10) business days, DOT Registry or its registrar may cancel or suspend the resolution of the domain name.

This Takedown Procedure will not prejudice any party’s election to pursue another dispute mechanism, such as URS or UDRP, as set forth in DOT Registry’s response to Question 28.

Further, Dot Registry has worked diligently to secure a strong relationship with the National Association of Secretaries of State (NASS) in order to accurately depict the necessary registration policies and programs that will protect the Community of Registered Limited Liability Partnerships. NASS was established in 1904 and is deemed the oldest non-partisan organization for public officials. Its membership consists of Secretaries of State and Lieutenant

GAC Advice Response Form for Applicants

Governors responsible for the registration and maintenance of Limited Liability Partnerships in the US and its territories. Dot Registry has pledged to consult NASS throughout the life of the gTLD in regards to any changing state statutes, community admittance criteria, or policy adaptations in order to stay abridged of any changing state laws or registration guidelines. Additionally, Dot Registry is the only applicant who has established a relationship with the NASS or any Secretary of States Offices. As seen in our application and attached to this response the careful management of the .LLP gTLD is of vital importance to the Secretaries of State in the US. Dot Registry believes that the level of security necessary to responsibly operate this string can only be accomplished through a community gTLD. Further, Dot Registry is able to clearly define the registrants of this community, admittance requirements, commonality and has secured significant support from current members of the community. Further support of these assumptions can be seen in the attachments to question 20 of Dot Registry's application.

State of Tennessee

The Secretary of State
State Capitol
Nashville, Tennessee 37243-0305

Tre Hargett
Secretary of State

February 22, 2013

Internet Corporation of Assigned Names and Numbers
12025 Waterfront Drive
Suite 300
Los Angeles, CA 90094-2536

Subject: Letter of Support for the Restricted Use of the Top Level
Domains, “.INC”, “.LLC”, “.CORP”, and “.LLP”

To Whom It May Concern,

This letter confirms that the Tennessee Secretary of State’s Office is charged with registering businesses in the State of Tennessee. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses, which can be further divided into the following designations: The Community of Registered Corporations, the Community of Registered Limited Liability Companies and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers (“ICANN”) is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With growing national concern about fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their respective Secretary of State’s Office.

Sincerely,

Tre Hargett
Secretary of State

OFFICE OF THE SECRETARY OF STATE

ROSS MILLER
Secretary of State

RE: Restricted Use of Domains using .inc, .llc, .corp and .llp

TO WHOM IT MAY CONCERN;

My office is responsible for processing the organizational, amendatory and annual filings for Nevada corporations, limited liability companies, limited partnerships and other statutory business entities. These entities do business as Nevada entities not only in Nevada, but throughout the U.S. and around the world. My office is the second most popular business entity filing jurisdiction in the country, behind Delaware.

Fraudulent use of corporate entities, business identity theft and consumer protection are of growing concern to me, as is the potential of abuse by those offering online services. The free and unregulated issuance of names using these extensions is also a concern because of possible confusion or deception caused by entities that are not properly registered in my office.

It is my understanding that DOT Registry, LLC has applied to you for the use of the domain names with these extensions. I believe that restrictions and policies must be crafted not only to protect Nevada and U.S. entities, but also the consumers utilizing the associated web sites. I also understand that DOT Registry, LLC's application may include provisions protecting entities on file with my office, other Secretaries of State and state filing offices. Regardless of the applicant, such restrictions and protections must be in place.

I remain available if I can be of further assistance.

Respectfully,

A handwritten signature in blue ink that reads "Ross Miller".

Subject: Letter of support for the Restricted Use of the Top Level Domains, ".INC"
and ".LLC"

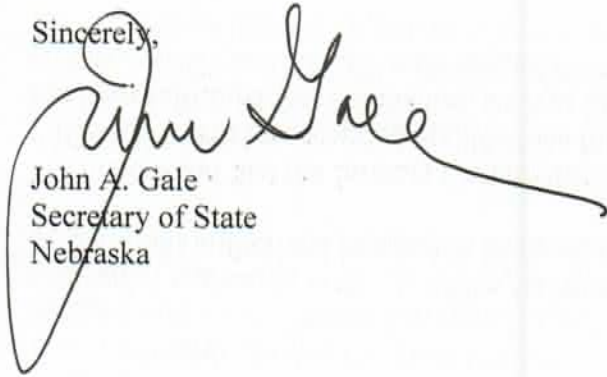

Ladies and Gentlemen:

This letter confirms that the State of Nebraska, Office of the Secretary of State, is charged with administering Nebraska's database of registered business entities. The companies registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with the Secretary of State.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a secretary of state or equivalent agency. It is important that registry companies provide access to the information provided by registered companies for jurisdictional purposes. Our office believes that such restrictions are integral to these strings and will object to the use of the strings, ".INC" and ".LLC" without any restrictions.

Sincerely,

John A. Gale

Dear Mr. Spurgeon,

I will not replicate the "form" letter on my letterhead that you requested for my signature in your e-mail message that I received today. It is not in a format or text that is comfortable for me.

However, because of my concern with the possible approval by ICANN of these extensions, I am willing to provide you with the enclosed letter. You may use it, as you deem appropriate.

By the way, NASS has not yet approved a letter, as referenced in your message. Although it was circulated through the membership of the Business Services Committee, the Executive Committee has not yet given final approval to the letter.

If Bill Clark or you have any questions or concerns about my letter, you are certainly welcomed to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

March 23, 2012

Internet Corporation for Assigned Names and Numbers
1101 New York Avenue NW Suite 930
Washington DC 20005

To Whom It May Concern:

As the Secretary of State, I have the administrative oversight of various business entity registrations filed in my state.

It is my understanding that your organization (ICANN) is now accepting applications for a new expanded top level domain name program. I have learned that extensions such as .INC, .LLC, .LLP, and .CORP may be under consideration and that is of significant concern to me.

If ICANN considers approving these extensions, I respectfully request that they be approved and awarded to a company that has submitted an application that includes restrictions they will abide by, which would provide all of the possible protection for legitimate businesses and consumers from confusion or fraud.

All of these mentioned extensions are recognized under North Dakota state law as a means of identifying various types of business entities that are legally filed with my office. Therefore, it is important to ensure that the website domain name being considered for a business entity is only extended to a business entity that has a corresponding legal registration identified with that domain name. These business entities, with their registration, have lawfully earned the right to use these entity identifiers. That right should not be infringed about by any company or individual that has not obtained the legal use of them through the registration process in one of the states.

Therefore, along with my fellow members of the National Association of Secretaries of State (NASS), I am of the opinion that these extension identifiers should only be extended to entities in their respective states that are legally and appropriately registered with the Secretary of State, or the equivalent state agency.

During the past several months, the NASS Business Services Committee (of which I am a member) has been considering the proposed ICANN program and has been reviewing the potential impact these new extensions would have on existing businesses and new businesses registering with the various states.

As one member of the committee, I believe it is fundamental that NASS be consulted by companies such as DOT Registry or any other applicants regarding policy related to the registering and identifying of businesses as this expanded program is considered by ICANN. And, if ICANN approves these extensions, the successful recipient will agree to extend the new extensions only to a "community" of businesses appropriately and legally registered in one of the various states.

Without having appropriate restrictions in place, I would strongly oppose approving these extensions and awarding them to any company.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

ELAINE F. MARSHALL
SECRETARY OF STATE

February 13, 2012

Dot Registry
208 W 19th St
Kansas City, MO 64108

Dear Ladies and Gentlemen:

This letter advises that the Department of the Secretary of State of North Carolina is charged with overseeing the business formation process for the formation of corporations, limited liability companies (LLCs), non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of North Carolina's database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (ICANN) will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with their state's administrator.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a Secretary of State or equivalent agency. I believe that entities not appropriately registered and maintained in any state should be prohibited from strings that would misrepresent their existence. As most Secretaries of State are not equipped to verify legitimate entity existence, even though we maintain that information, the verification process should be a requirement, albeit not ours.

Sincerely,

A handwritten signature in cursive script that reads "Elaine F. Marshall".

".CORP", and ".LLP"

To Whom this May Concern:

This letter confirms that The Office of the Minnesota Secretary of State is charged with registering businesses in the State of Minnesota. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses which can be further divided into the following designations: The Community of Registered Corporations, The Community of Registered Limited Liability Companies, and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings, with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With the growing national concern related to fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their Secretary of States Office.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Ritchie".

STATE OF DELAWARE
DEPARTMENT OF STATE

JEFFREY W. BULLOCK
SECRETARY OF STATE

March 20, 2012

ICANN
Attn: gTLD Program
4676 Admiralty Way
Suite 330
Marina del Rey, CA 90292-6601

To Whom It May Concern:

As Delaware's Secretary of State, I administer the State's company registry and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities, such as corporations and limited liability companies, (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 63% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies around the world.

I understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new generic Top Level Domain (gTLD) name extensions this year. I have been informed that at least one firm – DOT Registry LLC – and possibly several other firms, plan to apply for the strings ".INC", ".CORP", ".LLC" and other potentially related extensions that state registries define as "company endings".

I join a chorus of federal and state officials who urge ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse. As such, it is absolutely critical that if ICANN determines to grant such name extensions, that it does so in a restricted manner that is intended to protect consumers and the community of interest that exists among validly registered U.S. companies and my fellow State secretaries of state and other State company registrars that are responsible for administering the nation's legal entity registration system.

ICANN – gTLD program
March 20, 2012

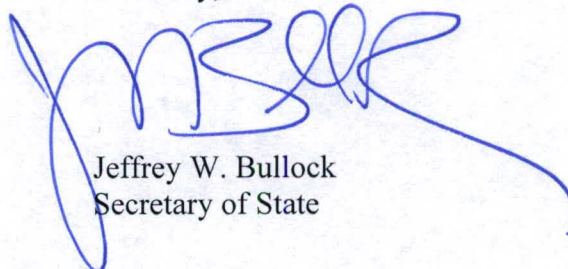

I therefore request that ICANN reject any request for the unrestricted use of “.INC”, “.LLC”, “.LLP”, “.CORP”, “.BANK”, “.TRUST” or similar commonly used company endings in the United States. The State of Delaware will object to the granting of such strings without restrictions.

I further request that, at a minimum, any approval for company ending strings be restricted in such a way that reasonably assures that the legal entity is, in fact, an active and validly registered legal entity in the United States, as DOT Registry LLC has proposed within its application. Specifically, any firm awarded the responsibility of administering such strings should be required to confirm whether the legal entity is validly formed according to criteria and documentation established by the states, and be required to check annually at renewal that the entity remains validly registered and actively in good standing according to criteria and documentation established by the states. The restrictions should further require that the homepage of such websites provide a mechanism that provides for the disclosure of the jurisdiction in which the entity is legally domiciled or include a geographic tag within the website name.

In order to reduce the risk of fraudulent activity, Delaware law places additional restrictions on the use of words such as “bank” and “trust” that are commonly associated with financial institutions. I therefore urge ICANN to seriously consider comment letters that have been submitted by the American Bankers Association and others urging ICANN to reject or place very significant restrictions on applications for the use of name extensions such as “.BANK” and “.TRUST”.

If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration of this request.

Sincerely,

Jeffrey W. Bullock
Secretary of State

Suzanne Radell
Senior Policy Advisor
National Telecommunications and Information Administration (NTIA)
Department of Commerce
1401 Constitution Ave. NW
Washington, DC 20230
SRadell@ntia.doc.gov

Dear Ms. Dryden and Ms. Radell:

As Delaware's Secretary of State, I administer the State's company registry, and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities such as corporations and limited liability companies (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 64% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies in North America and around the world.

In March of 2012, I imparted my concerns about ICANN's application review process for generic Top Level Domain (gTLDs) name extensions defined by state and provincial registries as "company endings". Such company endings include, but are not limited to, ".INC", ".CORP", ".LLP", ".LTD", ".GMBH", ".COMPANY" and "LLC". At that time, I joined a chorus of federal and state officials in the United States who had urged ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse.

Since expressing my initial concerns, I have followed the application and early warning process closely. More recently, I've learned of ICANN's new "Public Interest Commitments" (PIC) process and its associated "Public Interest Commitment Dispute Resolution Process" (PICDRS). Having the benefit of ICANN's response to my initial concerns and having reviewed the applications that have been submitted, I have no confidence that ICANN is interested in or capable of putting a system of clear and transparent enforcement mechanisms in place to ensure that "company endings" are not used for fraudulent or misleading purposes.

The responses I have received from ICANN and others have failed to acknowledge in any way the complex public policy questions raised by allowing gTLDs that use company endings. Instead, the responses have focused entirely on the process for filing objections to applications. The singular focus on an approval process rather than recognizing the serious policy implications associated with its granting of certain gTLDs calls into question whether ICANN is capable of evaluating, instituting and enforcing meaningful measures to protect consumers and legitimate legal entities from fraud and abuse.

Over 30 applications were submitted for various company endings, and while some of the applications include a proposed verification process, many do not. Only one applicant sought any input whatsoever from the affected community in my state and nationally. So it is no surprise that applicants that did propose a verification system failed to propose systems with enforceable mechanisms for safeguarding consumers, the public at large, state regulators, and the Internet itself from the types of fraud and abuse that are likely to occur in the absence of specific safeguards.

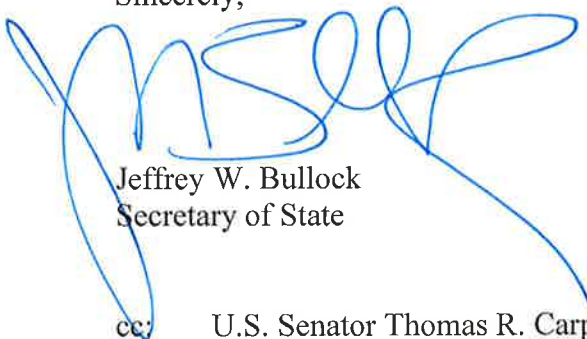

At this stage of the gTLDs process, I continue to believe that the public is best served if these company endings are not made available for use. I do not see an overriding public policy purpose or strong business case for ICANN to make them available – especially when hundreds of additional gTLDs are soon to become available.

It is also clear to me that any enforcement mechanism administered through ICANN is unlikely to provide the appropriate level of ongoing enforcement over the use of these sensitive gTLDs. The new PICDRS process, while no doubt well-intentioned, requires constant vigilance by the impacted community of company registrars. Not awarding these gTLDs is the preferred alternative. However, if such gTLDs are to be awarded and if there is going to be an effective and real-time enforcement mechanism, it must originate from the community with the greatest interest – namely, the company registrar

community represented in North America by organizations such as the International Association of Commercial Administrators (IACA) and the National Association of Secretaries of States (NASS) or in the case of non-U.S. endings such as .GMBH and .LTD with similar registrar communities elsewhere.

I am pleased to share these concerns and recommendations with you and I would welcome the opportunity to discuss them in greater detail. I am hoping that the GAC may be the appropriate vehicle for blocking the award of such gTLDs and assuring that adequate protections for consumers and businesses are put in place. If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration.

Sincerely,

Jeffrey W. Bullock
Secretary of State

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dot Registry, LLC
Application ID	1-880-35979
Applied for TLD (string)	.INC

Response:

As the only community applicant for the .INC extension, Dot Registry, LLC is acutely aware of the need for safeguards and registration policies that will ensure the long term integrity of the .INC gTLD for both registrants and consumers.

Dot Registry’s mission of building confidence, trust, reliance and loyalty for consumers and business owners alike; by creating a dedicated gTLD to specifically serve the Community of Registered Corporations is supported through their registry service, registration policies, dispute resolution processes, and ICANN required rights protection mechanisms. Dot Registry will foster consumer peace of mind with confidence. By ensuring that all domains bearing our gTLD string are members of the Registered Community of US Corporations. Our verification process will create an unprecedented level of security for online consumers by authenticating each of our registrant’s right to conduct business in the United States. The “.INC” gTLD will fill a unique void in the current DNS and assist in decreasing the burden on existing domain names, by identifying members of the Registered Community of Corporations.

The social implications of business identity theft and consumer confusion are a paramount concern to DOT Registry. In our currently unstable economy, stimulating economic growth is vital. One means to such growth is by defusing the rampant, legitimate fear caused by online crimes and abuse, which leads to curtailed consumer behavior. By introducing the “.INC” domain into the DNS, DOT Registry will attempt to reduce the social impact of identity theft on business owners which will in turn reduce consumer fears related to spending and ultimately boost economic growth in regards to consumption and purchase power.

Dot Registry’s application currently contains the following registration policies and naming conventions, which directly address the concerns listed by GAC in their April 11th advice (the below excerpts are pulled directly from our application response to question 18):

GAC Advice Response Form for Applicants

- 1) A Registrant will only be awarded the “.INC” domain that matches or includes a substantial part of the Registrant’s legal name. For example, Blue Star Partners, Inc. would be able to purchase either BlueStarPartners.INC or BlueStar.INC.
- 2) Registrants will not be allowed to register product line registrations, regardless of the products affiliation to the corporation. All awarded domains must match or include a substantial part of the Registrant’s legal name.
- 3) If there are registrants applying for the same domain names, which correspond to their legal business names as registered in different states, then the “.INC” domain will be awarded on a first-come, first-served basis to the first registrant.
- 4) However, if a registrant has a trademark registered with the United States Patent and Trademark Office (USPTO), then such registrant will have priority over any other registrant to be awarded the applied for “.INC” domain.
- 5) If a registrant’s “.INC” domain has already been awarded to another registrant with the same or similar legal name, then DOT Registry will offer to award such registrant a “.INC” domain with a distinctive denominator including but not limited to a tag, company describer, or name abbreviation. For example, if BlueStar.INC was awarded to Blue Star Partners, Inc. of California, then Blue Star Partners, Inc. of Kansas would be offered the opportunity to use BlueStarPartners.INC.
- 6) DOT Registry will work closely with the Secretary of State’s Offices throughout the United States, with NASS and with a number of other agencies and organizations in maintaining the integrity and security of its domain names. DOT Registry will utilize the Secretary of States’ online resources to confirm that companies applying for their “.INC” domain are in fact registered businesses.
- 7) All registrants that are awarded the “.INC” domain will agree to a one-year minimum contract for their domain names that will automatically renew for an additional year on an annual basis if such contract is not terminated prior to the expiration of the renewal date.
- 8) DOT Registry or it’s designated agent will annually verify each registrants community status. Verification will occur in a process similar to the original registration process for each registrant, in which the registrars will verify each registrant’s “Active” Status with the applicable state authority. Each registrar will evaluate whether its registrants can still be considered “Active” members of the Community of Registered Corporations. In this regard, the following items would be considered violations of DOT Registry’s Registration Guidelines, and may result in dissolution of a registrant’s awarded “.INC” domain:
 - (a) If a registrant previously awarded the “.INC” domain ceases to be registered with the State.
 - (b) If a registrant previously awarded a “.INC” domain is dissolved and/or forfeits the domain for any reason.
 - (c) If a registrant previously awarded the “.INC” domain is administratively dissolved by the State.Any registrant found to be “Inactive,” or which falls into scenarios (a) through (c) above, will be issued a probationary warning by their registrar, allowing for the registrant to restore its active status or resolve its dissolution with its applicable Secretary of State’s office. If the registrant is unable to restore itself to “Active” status within the defined probationary period, their previously assigned “.INC” will be forfeited. DOT Registry reserves the right to change the definition of “Active” in accordance with the policies of the Secretaries of State. Domains will be temporarily suspended during the review process.
- 9) If DOT Registry discovers that a registrant wrongfully applied for and was awarded a “.INC” domain, then such “.INC” will be immediately forfeited to DOT Registry. Wrongful

application includes but is not limited to: a registrant misrepresenting itself as a member of the Community of Registered Corporations, a registrant participating in illegal or fraudulent actions, or where a registrant would be in violation of our abuse policies described in Question 28 (including promoting or facilitating spam, trademark or copyright infringement, phishing, pharming, willful distribution of malware, fast flux hosting, botnet command and control, distribution of pornography, illegal access to other computers or networks, and domain kiting/tasting).

10) In the case of domain forfeiture due to any of the above described options, all payments received by the Registrant for registration services to date or in advance payment will be non-refundable.

11) All registration information will be made publicly available. DOT Registry will not accept blind registration or registration by proxy. DOT Registry's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement. Additionally, DOT Registry will provide a Web-based WHOIS application, which will be located at www.whois.inc. The WHOIS Web application will be an intuitive and easy to use application which will allow the general public to easily access registration information for each ".INC" site. A complete description of these services can be found in Question 26 below.

12) Awarded names are non-transferrable to entities outside of the designated community, regardless of affiliation to any member of the community. In the event that a registrant's business entity merges, is acquired, or sold, the new entity will be allowed to maintain the previously awarded ".INC" domain until the domain renewal date, at which point they will be evaluated as described in number seven (7) above. Further, any entity acquiring a ".INC" domain through the processes described in this guideline that does not meet the registration criteria and wishes to maintain the awarded domain will be allowed a grace period after the renewal verification process to correct any non-compliance issues in order to continue operating their acquired domain. If the said entity is unable to comply with DOT Registry's guidelines, the awarded domain will be revoked.

13) If an application is unable to be verified or does not meet the requirements of the sponsored community, the application will be considered invalid. In addition to Applicant's comprehensive eligibility, verification, and policing mechanisms, DOT Registry will implement a series of Rights Protection Mechanisms (RPM), including but not limited to: Support for and interaction with the Trademark Clearinghouse ("Clearinghouse"); use of the Trademark Claims Service; segmented Sunrise Periods allowing for the owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks; subsequent Sunrise Periods to give trademark owners or registrants that own the rights to a particular name the ability to block the use of such name; and stringent take down policies and all required dispute resolution policies. Dot Registry's dispute resolution processes, rights protection mechanisms, trademark clearing house procedures and whois verification information are further supported in their application in the following sections:

Question 22

Protection of Geographic Names at the Second Level of your proposed gTLD

Applicant has thoroughly reviewed ISO 3166-1 and ISO 3166-2, relevant UN documents on the standardization of geographic names, GAC correspondence relating to the reservation of geographic names in the .INFO TLD, and understands its obligations under Specification 5 of the

draft Registry Agreement. Applicant shall implement measures similar to those used to protect geographic names in the .INFO TLD by reserving and registering to itself all the geographic place names found in ISO-3166 and official country names as specified by the UN. Applicant has already discussed this proposed measure of protecting geographic names with its registry services provider, Neustar, and has arranged for such reservation to occur as soon after delegation as is technically possible.

Question 26

Whols Compliance

As with the .INFO TLD, only if a potential second-level domain registrant makes a proper showing of governmental support for country or territorial names will Applicant then relay this request to ICANN. At this point, Applicant would wait for the approval of the GAC and of ICANN before proceeding to delegate the domain at issue.

Applicant recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders, and the public as a whole, and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement and relevant RFCs.

Applicant's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs, and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, the WHOIS service provided by Applicant's registry services operator has been designed from the ground up to display as much information as required by ICANN and respond to a very stringent availability and performance requirement.

Some of the key features of Applicant's WHOIS services will include:

- Fully compliant with all relevant RFCs including 3912;
- Production proven, highly flexible, and scalable (applicant's back-end registry services provider has a track record of 100% availability over the past 10 years);
- Exceeds current and proposed performance specifications;
- Supports dynamic updates with the capability of doing bulk updates;
- Geographically distributed sites to provide greater stability and performance; and
- Search capabilities (e.g., IDN, registrant data) that mitigate potential forms of abuse as discussed below.

Applicant's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

Applicant's WHOIS service will support port 43 queries, and will be optimized for speed using an in-memory database and a master-slave architecture between SRS and WHOIS slaves. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Applicant's registry services operator currently processes millions of WHOIS queries per day.

GAC Advice Response Form for Applicants

In addition to the WHOIS Service on port 43, Applicant will provide a Web-based WHOIS application, which will be located at www.whois.inc. This WHOIS Web application will be an intuitive and easy to use application for the general public to use. The WHOIS Web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

The WHOIS web application will also provide features not available on the port 43 service. These include:

- Extensive support for international domain names (IDN)
- Ability to perform WHOIS lookups on the actual Unicode IDN
- Display of the actual Unicode IDN in addition to the ACE-encoded name
- A Unicode to Punycode and Punycode to Unicode translator
- An extensive FAQ
- A list of upcoming domain deletions

Applicant will also provide a searchable web-based WHOIS service in accordance with Specification 4 Section 1.8 The application will enable users to search the WHOIS directory to find exact or partial matches using any one or more of the following fields:

- Domain name
- Contacts and registrant's name
- Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)
- Registrar ID
- Name server name and IP address
- Internet Protocol addresses
- The system will also allow search using non-Latin character sets which are compliant with IDNA specification

The WHOIS user will be able to choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria and their WHOIS information will quickly be returned to the user.

In order to reduce abuse for this feature, only authorized users will have access to the Whois search features after providing a username and password.

Applicant will provide third party access to the bulk zone file in accordance with Specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider, which will make access to the zone files in bulk via FTP to any person or organization that signs and abides by a Zone File Access (ZFA) Agreement with the registry. Contracted gTLD registries will provide this access daily and at no charge.

Applicant will also provide ICANN and any emergency operators with up-to-date Registration Data on a weekly basis (the day to be designated by ICANN). Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, unless ICANN requests other means in the future. Applicant's Legal Team will regularly monitor the registry service provider to ensure that they are providing the services as described above. This will entail random monthly testing of the WHOIS port 43 and Web-based services to ensure that they meet the ICANN Specifications and

GAC Advice Response Form for Applicants

RFCs as outlined above, if not, to follow up with the registry services provider to ensure that they do. As the relevant WHOIS will only contain Applicant's information, Applicant's WHOIS services will necessarily be in compliance with any applicable privacy laws or

Question 28

Abuse Prevention and Mitigation

General Statement of Policy

Abuse within the registry will not be tolerated. DOT Registry will implement very strict policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. DOT Registry's homepages will provide clear contact information for its Abuse Team, and in accordance with ICANN policy DOT Registry shall host NIC.INC, providing access to .INC's Whois services, the Abuse Policy, and contact information for the Abuse Team.

Anti-Abuse Policy

DOT Registry will implement in its internal policies and its Registry-Registrar Agreements (RRAs) that all registered domain names in the TLD will be subject to a Domain Name Anti-Abuse Policy ("Abuse Policy").

The Abuse Policy will provide DOT Registry with broad power to suspend, cancel, or transfer domain names that violate the Abuse Policy. DOT Registry will publish the Abuse Policy on its home website at NIC.INC and clearly provide DOT Registry's Point of Contact ("Abuse Contact") and its contact information. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of abuse complaints, and a telephone number and mailing address for the primary contact. DOT Registry will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made.

In addition, with respect to inquiries from ICANN-Accredited registrars, the Abuse Contact shall handle requests related to abusive domain name practices.

Inquiries addressed to the Abuse Contact will be routed to DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy as described in more detail below. DOT Registry will catalog all abuse communications in its CRM software using a ticketing system that maintains records of all abuse complaints indefinitely. Moreover, DOT Registry shall only provide access to these records to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

The Abuse Policy will state, at a minimum, that DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to ; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Registry, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, registry services provider, or any registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant's

GAC Advice Response Form for Applicants

pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.

The Abuse Policy will define the abusive use of domain names to include, but not be limited to, the following activities:

- **Illegal or fraudulent actions:** use of the DOT Registry's or Registrar's services to violate the laws or regulations of any country, state, or infringe upon the laws of any other jurisdiction, or in a manner that adversely affects the legal rights of any other person;
- **Spam:** use of electronic messaging systems from email addresses from domains in the TLD to send unsolicited bulk messages. The term applies to e-mail spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of Web sites and Internet forums;
- **Trademark and Copyright Infringement:** DOT Registry will take great care to ensure that trademark and copyright infringement does not occur within the .INC TLD. DOT Registry will employ notice and takedown procedures based on the provisions of the Digital Millennium Copyright Act (DMCA) ;
- **Phishing:** use of counterfeit Web pages within the TLD that are designed to trick recipients into divulging sensitive data such as usernames, passwords, or financial data;
- **Pharming:** redirecting of unknowing users to fraudulent Web sites or services, typically through DNS hijacking or poisoning;
- **Willful distribution of malware:** dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and trojan horses.
- **Fast flux hosting:** use of fast-flux techniques to disguise the location of Web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities. Fast-flux techniques use DNS to frequently change the location on the Internet to which the domain name of an Internet host or name server resolves. Fast flux hosting may be used only with prior permission of DOT Registry;
- **Botnet command and control:** services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct denial-of-service attacks (DDoS attacks);
- **Distribution of pornography;**
- **Illegal Access to Other Computers or Networks:** illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity);
- **Domain Kiting/Tasting:** registration of domain names to test their commercial viability before returning them during a Grace Period;
- **High Volume Registrations/Surveying:** registration of multiple domain names in order to warehouse them for sale or pay-per-click websites in a way that can impede DOT Registry from offering them to legitimate users or timely services to other subscribers;
- **Geographic Name:** registering a domain name that is identical to a Geographic Name, as defined by Specification 5 of the Registry Agreement;
- **Inadequate Security:** registering and using a domain name to host a website that collects third-party information but does not employ adequate security measures to protect

GAC Advice Response Form for Applicants

third-party information in accordance with that geographic area's data and financial privacy laws;

- Front Running: registrars mining their own web and Whois traffic to obtain insider information with regard to high-value second-level domains, which the registrar will then register to itself or an affiliated third party for sale or to generate advertising revenue;
- Whois Accuracy: Intentionally inserting false or misleading Registrant information into the TLD's Whois database in connection with the bad faith registration and use of the domain in question;
- Whois Misuse: abusing access to the Whois database by using Registrant information for data mining purposes or other malicious purposes;
- Fake Renewal Notices; misusing Whois Registrant information to send bogus renewal notices to Registrants on file with the aim of causing the Registrant to spend unnecessary money or steal or redirect the domain at issue.

Domain Anti-Abuse Procedure

DOT Registry will provide a domain name anti-abuse procedure modeled after the DMCA's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.INC the Abuse Policy and the contact information for the Abuse Contact. Inquiries addressed to the Point of Contact will be addressed to and received by DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy. DOT Registry will catalog all abuse communications and provide them to third parties only under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any correspondence ("Complaint") from a complaining party ("Complainant") to the Abuse Contact will be ticketed in DOT Registry's CRM software and relayed to DOT Registry's Abuse Team. A member of DOT Registry's Abuse Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email and that DOT Registry will notify the Complainant of the results of the Complaint within ten (10) days of receiving the Complaint.

DOT Registry's Abuse Team will review the Complaint and give it a "quick look" to see if the Complaint reasonably falls within an abusive use as defined by the Abuse Policy. If not, the Contact will write an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated abusive uses as defined by the Abuse Policy and that DOT Registry considers the matter closed.

If the quick look does not resolve the matter, DOT Registry's Abuse Team will give the Complaint a full review. Any Registrant that has been determined to be in violation of DOT Registry policies shall be notified of the violation of such policy and their options to cure the violation. Such notification shall state:

- 1) the nature of the violation;
- 2) the proposed remedy to the violation;
- 3) the time frame to cure the violation; and

4) the Registry's options to take subsequent action if the Registrant does not cure the violation.

If an abusive use is determined DOT Registry's Abuse Team will alert it's Registry services team to immediately cancel the resolution of the domain name. DOT Registry's Abuse Team will immediately notify the Registrant of the suspension of the domain name, the nature of the complaint, and provide the Registrant with the option to respond within ten (10) days or the domain will be canceled.

If the Registrant responds within ten (10) business days, it's response will be reviewed by the DOT Registry's Abuse Team for further review. If DOT Registry's Abuse Team is satisfied by the Registrant's response that the use is not abusive, DOT Registry's Abuse Team will submit a request by the registry services provider to reactivate the domain name. DOT Registry's Abuse Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the Registrant does not respond within ten (10) business days, DOT Registry will notify the registry services team to cancel the abusive domain name.

This Anti-Abuse Procedure will not prejudice either party's election to pursue another dispute mechanism, such as URS or UDRP.

With the resources of DOT Registry's registry services personnel, DOT Registry can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one (1) business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, questions, or comments concerning the request, and an outline of the next steps to be taken by Application for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by DOT Registry and involves the type of activity set forth in the Abuse Policy, the sponsoring registrar is then given forty-eight (48) hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 48-hour period (i.e., is unresponsive to the request or refuses to take action), DOT Registry will place the domain on "serverHold".

Maintenance of Registration Criteria

If a Registrant previously awarded the ".INC" domain ceases to be registered with a Secretary of State or legally applicable jurisdiction, such Registrant will be required to forfeit the assigned ".INC" domain at their designated renewal date.

If DOT Registry discovers that a Registrant wrongfully applied for and was awarded a ".INC" domain, then such ".INC" will be immediately forfeited to DOT Registry.

If a Registrant previously awarded a ".INC" domain is dissolved and/or forfeited for any reason, then such ".INC" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".INC" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".INC" will be forfeited to DOT

GAC Advice Response Form for Applicants

Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

A Registrant's "Active" Status will be verified annually. Any Registrant not considered "Active" by the definition listed above in question 18 will be given a probationary warning, allowing time for the Registrant to restore itself to "Active" Status. If the Registrant is unable to restore itself to "Active" status within the defined probationary period, their previously assigned ".INC" will be forfeited. In addition, DOT Registry's definition of "Active" may change in accordance with the policies of the Secretaries of State.

Orphan Glue Removal

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often supports correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in the DNS. Therefore, when DOT Registry has written evidence of actual abuse of orphaned glue, DOT Registry will take action to remove those records from the zone to mitigate such malicious conduct.

DOT Registry's registry service operator will run a daily audit of entries in its DNS systems and compare those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either DOT Registry or its registry services operator becomes aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

Whols Accuracy

DOT Registry will provide Whois accessibility in a reliable, consistent, and predictable fashion in order to promote Whois accuracy. The Registry will adhere to port 43 Whois Service Level Agreements (SLAs), which require that port 43 WHOIS service be highly accessible and fast.

DOT Registry will offer thick Whois services, in which all authoritative Whois data—including contact data—is maintained at the registry. DOT Registry will maintain timely, unrestricted, and public access to accurate and complete Whois information, including all data objects as specified in Specification 4. Moreover, prior to the release of any domain names, DOT Registry's registrar will provide DOT Registry with an authorization code to verify eligible Registrants provide accurate Registrant contact information.

In order to further promote Whois accuracy, DOT Registry will offer a mechanism whereby third parties can submit complaints directly to the DOT Registry (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete Whois data. Such information shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to cancel or suspend the applicable domain name(s) should DOT Registry determine that the domains are being used in a manner contrary to DOT Registry's abuse policy.

DOT Registry shall also require authentication and verification of all Registrant data. DOT Registry shall verify the certificates of incorporation, whether a corporation is in active status, contact information, e-mail address, and, to the best of its abilities, determine whether address information supplied is accurate. Second-level domains in the TLD shall not be operational unless two (2) out of three (3) of the above authentication methods have been satisfied.

With regard to registrars, DOT Registry shall provide financial incentives for pre-authentication of Registrant data prior to such data being passed to the registry. DOT Registry will provide for lower renewal and bulk registration fees in its RRAs for registrations which have been pre-authenticated and which DOT Registry can rely on as accurate data to be entered into its Whois database. Also in its RRAs, DOT Registry will also provide for higher fees and penalties for Registrant data which is obscured by proxies.

DOT Registry will also maintain historical databases of Registrants and associated information which have provided inaccurate Whois information. DOT Registry will endeavor to use this database to uncover patterns of suspicious registrations which DOT Registry shall then flag for further authentication or for review of the Registrant's use of the domain in question to ensure Registrant's use is consonant with DOT Registry's abuse policy.

In addition, DOT Registry's Abuse Team shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of domain names within the applied-for TLD to test the accuracy of the Whois information. Although this will not include verifying the actual information in the WHOIS record, DOT Registry will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, the DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to suspend the applicable domain name(s) should DOT Registry determine that the Registrant is using the domain in question in a manner contrary to DOT Registry's abuse policy. DOT Registry shall also reserve the right to report such recalcitrant registrar activities directly to ICANN.

GAC Advice Response Form for Applicants

All domain name Registrants will have adequate controls to ensure proper access to domain functions.

In addition to the above, all domain name Registrants in the applied-for TLD will be required to name at least two (2) unique points of contact who are authorized to request and/or approve update, transfer, and deletion requests. The points of contact must establish strong passwords with the registrar that must be authenticated before a point of contact will be allowed to process updates, transfer, and deletion requests. Once a process update, transfer, or deletion request is entered, the points of contact will automatically be notified when a domain has been updated, transferred, or deleted through an automated system run by DOT Registry's registrar. Authentication of modified Registrant information shall be accomplished 48 Hours.

Question 29

Rights Protection Mechanisms

DOT Registry is committed to implementing strong and integrated Rights Protection Mechanisms (RPM). Use of domain names that infringe upon the legal rights of others in the TLD will not be tolerated. The nature of such uses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. DOT Registry will protect the legal rights of others by implementing RPMs and anti-abuse policies backed by robust responsiveness to complaints and requirements of DOT Registry's registrars.

Trademark Clearinghouse

Each new gTLD Registry will be required to implement support for, and interaction with, the Trademark Clearinghouse ("Clearinghouse"). The Clearinghouse is intended to serve as a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. The data maintained in the Clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service.

Utilizing the Clearinghouse, all operators of new gTLDs must offer: (i) a Sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a Trademark Claims Service for at least the first 60 days that second-level registrations are open. The Trademark Claims Service is intended to provide clear notice to a potential registrant of the rights of a trademark owner whose trademark is registered in the Clearinghouse.

Sunrise A Period

DOT Registry will offer segmented Sunrise Periods. The initial Sunrise Period will last [minimum 30 days] for owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks. All domain names registered during the Sunrise Period will be subject to DOT Registry's domain name registration policy, namely, that all registrants be validly registered corporations and all applied-for domains will only be awarded the ".LLC" domain that matches or includes a substantial part of the Registrant's legal name. DOT Registry will assign its Rights Protection Team; which is lead by our Director of Legal and

GAC Advice Response Form for Applicants

Policy and further supported by two dedicated employees to receive and authenticate all Sunrise Registrations.

DOT Registry's registrar will ensure that all Sunrise Registrants meet sunrise eligibility requirements (SERs), which will be verified by Clearinghouse data. The proposed SERs include: (i) ownership of a mark that is (a) nationally or regionally registered and for which proof of use, such as a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (b) that have been court-validated; or (c) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008, (ii) optional registry elected requirements concerning international classes of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

Upon receipt of the Sunrise application, DOT Registry will issue a unique tracking number to the Registrar, which will correspond to that particular application. All applications will receive tracking numbers regardless of whether they are complete. Applications received during the Sunrise period will be accepted on a first-come, first-served basis and must be active corporations in good standing before they may be awarded the requested domain, or able to proceed to auction. Upon submission of all of the required information and documentation, registrar will forward the information to DOT Registry's [RPM Team] for authentication. DOT Registry's [RPM Team] will review the information and documentation and verify the trademark information, and notify the potential registrant of any deficiencies. If a registrant does not cure any trademark-related deficiencies and/or respond by the means listed within one (1) week, DOT Registry will notify its registrar and the domain name will be released for registration. DOT Registry will incorporate a Sunrise Dispute Resolution Policy (SDRP). The SDRP will allow challenges to Sunrise Registrations by third parties for a ten-day period after acceptance of the registration based on the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national or regional effect or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

After receiving a Sunrise Complaint, DOT Registry's [RPM Team] will review the Complaint to see if the Complaint reasonably asserts a legitimate challenge as defined by the SDRP. If not, DOT Registry's [RPM Team] will send an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated grounds as defined by the SDRP and that DOT Registry considers the matter closed.

If the domain name is not found to have adequately met the SERs, DOT Registry's [RPM Team] will alert the registrar and registry services provider to immediately suspend the resolution of the domain name. Thereafter, DOT Registry's [RPM Team] will immediately notify the Sunrise Registrant of the suspension of the domain name, the nature of the complaint, and provide the

GAC Advice Response Form for Applicants

registrant with the option to respond within ten (10) days to cure the SER deficiencies or the domain name will be canceled.

If the registrant responds within ten (10) business days, its response will be reviewed by DOT Registry's [RPM Team] to determine if the SERs are met. If DOT Registry's [RPM Team] is satisfied by the registrant's response, DOT Registry's [RPM Team] will submit a request to the registrar and the registry services provider to unsuspend the domain name. DOT Registry's [RPM Team] will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial.

Names secured as described through the Sunrise AT/AD processes will result in the registration of resolving domain names at the registry. Names reserved through the Sunrise B process will not result in resolving domain name at DOT Registry. Rather, these names will be reserved and blocked from live use. The applied for string will resolve to an informational page informing visitors that the name is unavailable for registration and reserved from use.

Applications that fit the following criteria will be considered during the Sunrise A period:

Applicant owns and operates an existing domain name in another gTLD or ccTLD, in connection with eligible commerce and satisfies the registration requirements described in Section 1.

Sunrise B

Applications that fit the following criteria will be considered during the Sunrise B period:

- a) Applicant holds valid trademark registrations or owns rights to a particular name and wishes to block the use of such name.
- b) The Applicant must seek to block a name that corresponds to the entire text of its trademark or the complete textual component of a graphical or compound trademark. Certain variances are permitted for trademarks containing spaces or special characters that are not available for domain names.

Any entity, applying for blocks under Sunrise B as a non-member of the sponsored community cannot apply for names in the TLD.

Founder's Program

Applications for the Founder's Program will be accepted after the close of the Sunrise Periods. Potential registrants should understand that certain expectations, as described herein will accompany the issuance of a domain name under the Founder's Program and all registrations resulting from this program will be required to follow the below listed guidelines, which will be further described in their Program Agreement:

- a) Registrants awarded a domain through the Founder's Program must use their best efforts to launch a ".LLC" website within 30 days of signing the Program Agreement.
- b) In addition, each registrant will be required to issue a press release announcing the launch of their ".LLC" Founder Website, concurrent with the launch of their .INC Founder Website, said press release must be approved by DOT Registry;
- c) Founder's websites should be kept good working order, with unique, meaningful content, user-friendly interfaces, and broad user appeal, for the duration of the License Term,
- d) Founders are expected to proactively market and promote ".LLC" gTLD in a manner that is likely to produce widespread awareness of the unique advantages gained through the ".LLC" string.
- e) Founders are expected to participate in reasonable joint marketing initiatives with DOT Registry or its Agents, these would be discussed and mutually agreed upon, given the unique circumstances of each marketing venture.

f) Founders will allow DOT Registry to use in good faith Founder's name, likeness, trademarks, logos, and Application contents (other than Confidential Information,) as well as other Founder information and content as may be mutually agreed, in DOT Registry's marketing, promotional and communications materials.

DOT Registry will randomly verify compliance of the above listed expectations and have the right to revoke any Founder's site, should they be deemed non-compliant.

Landrush

Landrush is a limited time opportunity for companies that want to secure a high value ".LLC" name for a small fee (above the basic registration cost). The landrush period will last 30 days. Applications will be accepted and evaluated to determine if they meet the requirements for registration. At the end of the Landrush period domain names with only one application will be awarded directly to the DOT Registry. Domain names with two or more applications will proceed to a closed mini auction, between the respective DOT Registries, where the highest bidder wins.

General Availability Period

DOT Registry must meet registration requirements.

Names will be awarded on a first-come, first serve basis which is determined as of the time of the initial request, not when authentication occurs.

Domain Name Contentions

Name contentions will arise when both a Sunrise A and Sunrise B application are submitted for the same name, the following actions will be taken to resolve the contention.

a) Both DOT Registries will be notified of the contention and the Sunrise A DOT Registry will be given first right to either register their requested domain or withdraw their application. Since ".LLC" is a sponsored community domain for registered Corporations, a domain applied for under Sunrise A will, all else being equal, receive priority over the identical domain applied for under Sunrise B. Sunrise A names get priority over Sunrise B names.

b) If the Sunrise A DOT Registry chooses to register their name regardless of the contention, then the Sunrise B DOT Registry may choose to pursue further action independently of DOT Registry to contest the name.

c) If two Sunrise A DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet both seek to be awarded the use of DELTA.INC) then DOT Registry will notify both DOT Registries of the contention and proceed to an auction process as described in Section 9.

d) If a Sunrise A DOT Registry and a Landrush DOT Registry apply for the same domain name, the Sunrise A DOT Registry, all else being equal will have priority over the Landrush DOT Registry.

e) If two Sunrise B DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet, both seek to block the use of DELTA. INC), then DOT Registry will accept both applications as valid and block the use of the indicated domain.

Appeal of Rejected Sunrise Applications

An DOT Registry can file a request for reconsideration within 10 days of the notification of DOT Registry's rejection. Reconsideration can be requested by completing a reconsideration form and filing a reconsideration fee with DOT Registry. Forms, fee information, and process documentation will be available on the DOT Registry website. Upon receipt of the reconsideration form and the corresponding fee, DOT Registry or its Agents will re-examine the application, and notify the Registrant of all findings or additional information needed. The Request for Reconsideration must be submitted through the Registrant's registrar, and a reconsideration fee must be paid to DOT Registry.

Auctions

GAC Advice Response Form for Applicants

Sunrise A names found to be in contention as described above will result in Auction. DOT Registry plans to have a qualified third party conduct our auction processes, therefore the rules contained in this document are subject to change based on the selection of an auctioneer:

a) When your auction account is created, it will be assigned a unique bidder alias in order to ensure confidential bidding. The bidder alias will not reflect any information about your account. You may change your bidder alias to a name of your choosing but once set, it cannot be changed again.

b) All auction participants are expected to keep their account information current, throughout the auction process.

c) Auction participants will receive up to date communication from the auctioneer as the auction progresses, bidding status changes, or issues arise.

d) Bidding

i) Auctions will follow a standard process flow: scheduled (upcoming), open and closed.

ii) You will receive an "Auction Scheduled" notice at least ten (10) days prior to the scheduled auction start date. You will receive an "Auction Start" notice on the auction start date, which will indicate that you may begin placing bids through the interface. Once closed, the auction is complete and if you are the winning bidder, you will proceed to the payment process.

iii) If you choose to bid for a particular domain and you are the highest bidder at the end of an auction, you are obligated to complete the transaction and pay the Auctioneer the amount of your winning bid. Carefully consider your bids prior to placing them - bids are not retractable under any circumstances.

iv) If no bids are placed on a particular domain, the Registry will register the domain on behalf of the first customer (in the respective phase) to submit an application through a registrar.

e) Extensions

i) A normal auction period is anticipated to last a minimum of 7 (seven) days. However, in the event of significant auction activity, an auction close may extend during the last twenty-four (24) hours of scheduled operation to better need the volume of the auction.

ii) Auction extensions are meant to provide a mechanism that is fair for bidders in all time zones to respond to being outbid.

iii) An auction extension will occur whenever the auction lead changes in the last twenty four (24) hours of the schedule of an auction. The close will be revised to reflect a new closing time set at twenty four (24) hours after the change in auction lead occurred. Essentially, this means that a winning maximum bid has to remain unchallenged for a period of twenty four (24) hours before the auction will close.

iv) It is important to note that extensions are not simply based on the auction value changing since this could occur as a result of proxy bidding where the same bidder retains their lead. In this case, the maximum bid has not changed, the leader has not changed and therefore no extension will occur.

f) Payment Default

In the event that you as the winning bidder decide not to honor your payment obligations (or in the event of a reversal of payment or a charge back by a credit card company or other payment provider) on any outstanding balance, the Registry has the right to cancel any/all of your winning registrations for any .INC domain name, regardless of whether they have been paid for or not. You do not have the right to "pick and choose" the names you wish to keep or not keep. Winning an auction creates an obligation to remit payment. Failure to remit payment is a breach of your agreement.. You will lose any previously won domains and will no longer be allowed to bid on any current or future auctions sponsored by DOT Registry. Participants are encouraged therefore to consider carefully each bid submitted as any bid could be a winning bid.

Trademark Claims Service

DOT Registry will offer a Trademark Claims Service indefinitely to provide maximum protection and value to rights holders. The Trademark Claims Service will be monitored and operated by DOT Registry's RPM Team that will receive all communications regarding the Trademark Claims Service and catalog them. DOT Registry's registrar will review all domain name requests to determine if they are an identical match of a trademark filed with the Trademark Clearinghouse. A domain name will be considered an identical match when the domain name consists of the complete and identical textual elements of the mark, and includes domain names where (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) certain special characters contained within a trademark are spelled out with appropriate words describing it (e.g., @ and &); and (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name are either (i) omitted or (ii) replaced by spaces, hyphens or underscores. Domain names that are plural forms of a mark, or that merely contain a mark, will not qualify as an identical match.

If the registrar determines that a prospective domain name registration is identical to a mark registered in the Trademark Clearinghouse, the registrar will be required to email a "Trademark Claims Notice" (Notice) in English to the protective registrant of the domain name and copy DOT Registry's RPM Team. The Notice will provide the prospective registrant information regarding the trademark referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. The Notice will be provided in real time without cost to the prospective registrant.

After receiving the notice, the registrar will provide the prospective registrant five (5) days to reply to the Trademark Claims Service with a signed document that specifically warrants that: (i) the prospective registrant has received notification that the mark is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice. If the warranty document satisfies these requirements, the registrar will effectuate the registration and notify DOT Registry's RPM Team.

After the effectuation of a registration that is identical to a mark listed in the Trademark Clearinghouse, the registrar will provide clear notice to the trademark owner consisting of the domain name that has been registered and copy DOT Registry's RPM Team. The trademark owner then has the option of filing a Complaint under the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS).

Uniform Rapid Suspension System (URS)

DOT Registry will specify in the Registry Agreement, all RRAs, and all Registration Agreements used in connection with the TLD that it and its registrars will abide by all decisions made by panels in accordance with the Uniform Rapid Suspension System (URS). DOT Registry's RPM Team will receive all URS Complaints and decisions, and will notify its registrar to suspend all registrations determined by a URS panel to be infringing within a commercially reasonable time of receiving the decision. DOT Registry's RPM Team will catalog all abuse communications, but

GAC Advice Response Form for Applicants

only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Uniform Domain Name Dispute Resolution Policy (UDRP)

DOT Registry will specify in the Registry Agreement, all Registry-Registrar Agreements, and Registration Agreements used in connection with the TLD that it will promptly abide by all decisions made by panels in accordance with the Uniform Domain Name Dispute Resolution Policy (UDRP). DOT Registry's RPM Team will receive all UDRP Complaints and decisions, and will notify its registrar to cancel or transfer all registrations determined to be infringing within ten (10) business days of receiving the decision. DOT Registry's [RPM Team] will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Proven Registrars

In order to reduce abusive registrations and other activities that affect the legal rights of others, DOT Registry will only contract with ICANN-accredited registrars. The registrar, according to the RRA, will not be able to register any domain names, thus eliminating the possibility of front-running.

Pre-Authorization and Authentication

Registrant authentication shall occur in accordance with the registration eligibility criteria and the Anti-Abuse Policy for .INC as set forth in Question 28.

The verification process is designed to prevent a prospective registrant from providing inaccurate or incomplete data, such that, if necessary, the registrant can be readily contacted regarding an infringing use of its site; indeed, the process (including verification of a registrant's certificate of incorporation) is designed to ensure that only qualified members of the community are permitted to register in the TLD.

DOT Registry will not permit registrants to use proxy services.

Thick Whois

DOT Registry will include a thick Whois database as required in Specification 4 of the Registry agreement. A thick Whois provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

Grace Period

If a Registrant previously awarded a ".LLC" domain is dissolved and/or forfeited for any reason, then such ".LLC" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

GAC Advice Response Form for Applicants

If a Registrant previously awarded the “.LLC” domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such “.LLC” will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

Takedown Procedure

DOT Registry will provide a Takedown Procedure modeled after the Digital Millennium Copyright Act’s notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.INC contact information for receiving rights protection complaints (Complaint) from rights holders, including but not limited to trademark and copyright Complaints. Complaints will be addressed to and received by DOT Registry’s RPM Team who will catalogue and ticket in DOT Registry’s CRM software and review as outlined herein. DOT Registry will catalog all rights protection communications and only provide them to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any Complaint from a rights holder will be relayed to DOT Registry’s RPM Team. A member of DOT Registry’s RPM Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email, and that DOT Registry will notify the Complainant of the results of the Complaint within (10) days of receiving the Complaint.

After sending the confirmation email, DOT Registry’s RPM Team will review the Complaint. If DOT Registry or its registrar determines that the registration was in bad faith, DOT Registry or its registrar may cancel or suspend the resolution of the domain name. Bad faith registration includes, but is not limited to, the registration of a domain identical to a registered trademark where the registrant has proceeded with registration after receipt of a Clearinghouse notice, as described above.

If the registrant responds within ten (10) business days, its response will be reviewed by the DOT Registry’s RPM Team. If DOT Registry’s RPM Team is satisfied by the registrant’s response that the content has been taken down or is not infringing, DOT Registry’s RPM Team will unsuspend the domain name. DOT Registry’s RPM Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the registrant does not respond within ten (10) business days, DOT Registry or its registrar may cancel or suspend the resolution of the domain name.

This Takedown Procedure will not prejudice any party’s election to pursue another dispute mechanism, such as URS or UDRP, as set forth in DOT Registry’s response to Question 28.

Further, Dot Registry has worked diligently to secure a strong relationship with the National Association of Secretaries of State (NASS) in order to accurately depict the necessary registration policies and programs that will protect the Community of Registered Corporations. NASS was established in 1904 and is deemed the oldest non-partisan organization for public officials. Its membership consists of Secretaries of State and Lieutenant Governors responsible

GAC Advice Response Form for Applicants

for the registration and maintenance of corporations in the US and its territories. Dot Registry has pledged to consult NASS throughout the life of the gTLD in regards to any changing state statutes, community admittance criteria, or policy adaptations in order to stay abridged of any changing state laws or registration guidelines. Additionally, Dot Registry is the only applicant who has established a relationship with the NASS or any Secretary of States Offices. As seen in our application and attached to this response the careful management of the .INC gTLD is of vital importance to the Secretaries of State in the US. Dot Registry believes that the level of security necessary to responsibly operate this string can only be accomplished through a community gTLD. Further, Dot Registry is able to clearly define the registrants of this community, admittance requirements, commonality and has secured significant support from current members of the community. Further support of these assumptions can be seen in the attachments to question 20 of Dot Registry's application.

Subject: Letter of Support for the Restricted Use of the Top Level
Domains, “.INC”, “.LLC”, “.CORP”, and “.LLP”

To Whom It May Concern,

This letter confirms that the Tennessee Secretary of State’s Office is charged with registering businesses in the State of Tennessee. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses, which can be further divided into the following designations: The Community of Registered Corporations, the Community of Registered Limited Liability Companies and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers (“ICANN”) is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With growing national concern about fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their respective Secretary of State’s Office.

Sincerely,

A handwritten signature in blue ink, appearing to read "Tre Hargett".

ROSS MILLER
Secretary of State

March 8, 2013

Internet Corporation of Assigned Names and Numbers
12025 Waterfront Drive, Suite 300
Los Angeles CA 90094-2536

RE: Restricted Use of Domains using .inc, .llc, .corp and .llp

TO WHOM IT MAY CONCERN;

My office is responsible for processing the organizational, amendatory and annual filings for Nevada corporations, limited liability companies, limited partnerships and other statutory business entities. These entities do business as Nevada entities not only in Nevada, but throughout the U.S. and around the world. My office is the second most popular business entity filing jurisdiction in the country, behind Delaware.

Fraudulent use of corporate entities, business identity theft and consumer protection are of growing concern to me, as is the potential of abuse by those offering online services. The free and unregulated issuance of names using these extensions is also a concern because of possible confusion or deception caused by entities that are not properly registered in my office.

It is my understanding that DOT Registry, LLC has applied to you for the use of the domain names with these extensions. I believe that restrictions and policies must be crafted not only to protect Nevada and U.S. entities, but also the consumers utilizing the associated web sites. I also understand that DOT Registry, LLC's application may include provisions protecting entities on file with my office, other Secretaries of State and state filing offices. Regardless of the applicant, such restrictions and protections must be in place.

I remain available if I can be of further assistance.

Respectfully,

A handwritten signature in blue ink that reads "Ross Miller".

Subject: Letter of support for the Restricted Use of the Top Level Domains, ".INC"
and ".LLC"

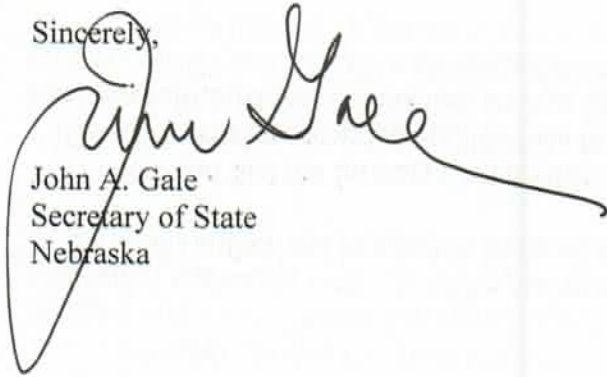

Ladies and Gentlemen:

This letter confirms that the State of Nebraska, Office of the Secretary of State, is charged with administering Nebraska's database of registered business entities. The companies registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with the Secretary of State.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a secretary of state or equivalent agency. It is important that registry companies provide access to the information provided by registered companies for jurisdictional purposes. Our office believes that such restrictions are integral to these strings and will object to the use of the strings, ".INC" and ".LLC" without any restrictions.

Sincerely,

John A. Gale

Dear Mr. Spurgeon,

I will not replicate the "form" letter on my letterhead that you requested for my signature in your e-mail message that I received today. It is not in a format or text that is comfortable for me.

However, because of my concern with the possible approval by ICANN of these extensions, I am willing to provide you with the enclosed letter. You may use it, as you deem appropriate.

By the way, NASS has not yet approved a letter, as referenced in your message. Although it was circulated through the membership of the Business Services Committee, the Executive Committee has not yet given final approval to the letter.

If Bill Clark or you have any questions or concerns about my letter, you are certainly welcomed to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

BISMARCK ND 58505-0500

March 23, 2012

Internet Corporation for Assigned Names and Numbers
1101 New York Avenue NW Suite 930
Washington DC 20005

To Whom It May Concern:

As the Secretary of State, I have the administrative oversight of various business entity registrations filed in my state.

It is my understanding that your organization (ICANN) is now accepting applications for a new expanded top level domain name program. I have learned that extensions such as .INC, .LLC, .LLP, and .CORP may be under consideration and that is of significant concern to me.

If ICANN considers approving these extensions, I respectfully request that they be approved and awarded to a company that has submitted an application that includes restrictions they will abide by, which would provide all of the possible protection for legitimate businesses and consumers from confusion or fraud.

All of these mentioned extensions are recognized under North Dakota state law as a means of identifying various types of business entities that are legally filed with my office. Therefore, it is important to ensure that the website domain name being considered for a business entity is only extended to a business entity that has a corresponding legal registration identified with that domain name. These business entities, with their registration, have lawfully earned the right to use these entity identifiers. That right should not be infringed about by any company or individual that has not obtained the legal use of them through the registration process in one of the states.

Therefore, along with my fellow members of the National Association of Secretaries of State (NASS), I am of the opinion that these extension identifiers should only be extended to entities in their respective states that are legally and appropriately registered with the Secretary of State, or the equivalent state agency.

During the past several months, the NASS Business Services Committee (of which I am a member) has been considering the proposed ICANN program and has been reviewing the potential impact these new extensions would have on existing businesses and new businesses registering with the various states.

As one member of the committee, I believe it is fundamental that NASS be consulted by companies such as DOT Registry or any other applicants regarding policy related to the registering and identifying of businesses as this expanded program is considered by ICANN. And, if ICANN approves these extensions, the successful recipient will agree to extend the new extensions only to a "community" of businesses appropriately and legally registered in one of the various states.

Without having appropriate restrictions in place, I would strongly oppose approving these extensions and awarding them to any company.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

Department of the Secretary of State

ELAINE F. MARSHALL
SECRETARY OF STATE

February 13, 2012

Dot Registry
208 W 19th St
Kansas City, MO 64108

Dear Ladies and Gentlemen:

This letter advises that the Department of the Secretary of State of North Carolina is charged with overseeing the business formation process for the formation of corporations, limited liability companies (LLCs), non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of North Carolina's database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (ICANN) will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with their state's administrator.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a Secretary of State or equivalent agency. I believe that entities not appropriately registered and maintained in any state should be prohibited from strings that would misrepresent their existence. As most Secretaries of State are not equipped to verify legitimate entity existence, even though we maintain that information, the verification process should be a requirement, albeit not ours.

Sincerely,

A handwritten signature in cursive script that reads "Elaine F. Marshall".

To Whom It May Concern:

The Missouri Secretary of State’s Office is charged with overseeing the business formation process for the formation of corporations, limited liability companies, non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of Missouri’s database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (“ICANN”) is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. With the growing national concern related to fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should be issued under a community designation of companies that are registered with the Secretary of State or equivalent agency in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies should be in place to protect the community of U.S. businesses and to ensure that these extensions are representative of members of their respective communities as verified through their Secretary of State’s Office. Further, this office does not support the use of the strings, “.INC” and “.LLC” “.CORP”, and “.LLP” without restrictions that protect this important community of registered US Businesses.

Sincerely,

A handwritten signature in black ink that reads "Jason Kander".

STATE OF DELAWARE
DEPARTMENT OF STATE

JEFFREY W. BULLOCK
SECRETARY OF STATE

March 20, 2012

ICANN
Attn: gTLD Program
4676 Admiralty Way
Suite 330
Marina del Rey, CA 90292-6601

To Whom It May Concern:

As Delaware's Secretary of State, I administer the State's company registry and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities, such as corporations and limited liability companies, (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 63% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies around the world.

I understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new generic Top Level Domain (gTLD) name extensions this year. I have been informed that at least one firm – DOT Registry LLC – and possibly several other firms, plan to apply for the strings ".INC", ".CORP", ".LLC" and other potentially related extensions that state registries define as "company endings".

I join a chorus of federal and state officials who urge ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse. As such, it is absolutely critical that if ICANN determines to grant such name extensions, that it does so in a restricted manner that is intended to protect consumers and the community of interest that exists among validly registered U.S. companies and my fellow State secretaries of state and other State company registrars that are responsible for administering the nation's legal entity registration system.

ICANN – gTLD program
March 20, 2012

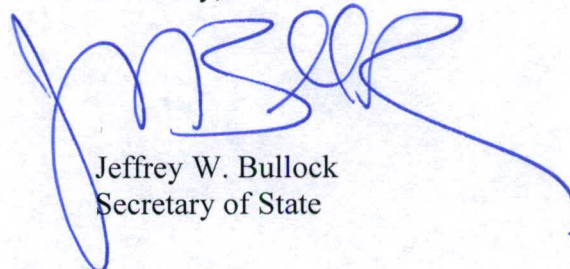

I therefore request that ICANN reject any request for the unrestricted use of “.INC”, “.LLC”, “.LLP”, “.CORP”, “.BANK”, “.TRUST” or similar commonly used company endings in the United States. The State of Delaware will object to the granting of such strings without restrictions.

I further request that, at a minimum, any approval for company ending strings be restricted in such a way that reasonably assures that the legal entity is, in fact, an active and validly registered legal entity in the United States, as DOT Registry LLC has proposed within its application. Specifically, any firm awarded the responsibility of administering such strings should be required to confirm whether the legal entity is validly formed according to criteria and documentation established by the states, and be required to check annually at renewal that the entity remains validly registered and actively in good standing according to criteria and documentation established by the states. The restrictions should further require that the homepage of such websites provide a mechanism that provides for the disclosure of the jurisdiction in which the entity is legally domiciled or include a geographic tag within the website name.

In order to reduce the risk of fraudulent activity, Delaware law places additional restrictions on the use of words such as “bank” and “trust” that are commonly associated with financial institutions. I therefore urge ICANN to seriously consider comment letters that have been submitted by the American Bankers Association and others urging ICANN to reject or place very significant restrictions on applications for the use of name extensions such as “.BANK” and “.TRUST”.

If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration of this request.

Sincerely,

Jeffrey W. Bullock
Secretary of State

SRadell@ntia.doc.gov

Dear Ms. Dryden and Ms. Radell:

As Delaware's Secretary of State, I administer the State's company registry, and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities such as corporations and limited liability companies (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 64% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies in North America and around the world.

In March of 2012, I imparted my concerns about ICANN's application review process for generic Top Level Domain (gTLDs) name extensions defined by state and provincial registries as "company endings". Such company endings include, but are not limited to, ".INC", ".CORP", ".LLP", ".LTD", ".GMBH", ".COMPANY" and "LLC". At that time, I joined a chorus of federal and state officials in the United States who had urged ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse.

Since expressing my initial concerns, I have followed the application and early warning process closely. More recently, I've learned of ICANN's new "Public Interest Commitments" (PIC) process and its associated "Public Interest Commitment Dispute Resolution Process" (PICDRS). Having the benefit of ICANN's response to my initial concerns and having reviewed the applications that have been submitted, I have no confidence that ICANN is interested in or capable of putting a system of clear and transparent enforcement mechanisms in place to ensure that "company endings" are not used for fraudulent or misleading purposes.

The responses I have received from ICANN and others have failed to acknowledge in any way the complex public policy questions raised by allowing gTLDs that use company endings. Instead, the responses have focused entirely on the process for filing objections to applications. The singular focus on an approval process rather than recognizing the serious policy implications associated with its granting of certain gTLDs calls into question whether ICANN is capable of evaluating, instituting and enforcing meaningful measures to protect consumers and legitimate legal entities from fraud and abuse.

Over 30 applications were submitted for various company endings, and while some of the applications include a proposed verification process, many do not. Only one applicant sought any input whatsoever from the affected community in my state and nationally. So it is no surprise that applicants that did propose a verification system failed to propose systems with enforceable mechanisms for safeguarding consumers, the public at large, state regulators, and the Internet itself from the types of fraud and abuse that are likely to occur in the absence of specific safeguards.

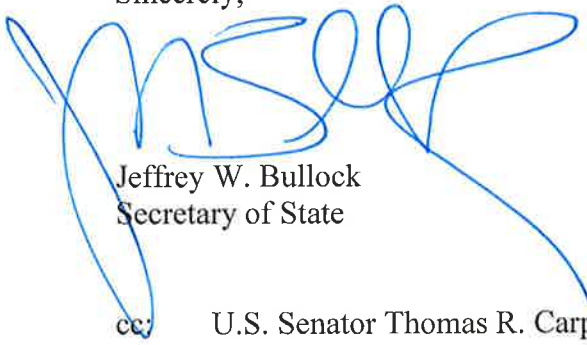

At this stage of the gTLDs process, I continue to believe that the public is best served if these company endings are not made available for use. I do not see an overriding public policy purpose or strong business case for ICANN to make them available – especially when hundreds of additional gTLDs are soon to become available.

It is also clear to me that any enforcement mechanism administered through ICANN is unlikely to provide the appropriate level of ongoing enforcement over the use of these sensitive gTLDs. The new PICDRS process, while no doubt well-intentioned, requires constant vigilance by the impacted community of company registrars. Not awarding these gTLDs is the preferred alternative. However, if such gTLDs are to be awarded and if there is going to be an effective and real-time enforcement mechanism, it must originate from the community with the greatest interest – namely, the company registrar

community represented in North America by organizations such as the International Association of Commercial Administrators (IACA) and the National Association of Secretaries of States (NASS) or in the case of non-U.S. endings such as .GMBH and .LTD with similar registrar communities elsewhere.

I am pleased to share these concerns and recommendations with you and I would welcome the opportunity to discuss them in greater detail. I am hoping that the GAC may be the appropriate vehicle for blocking the award of such gTLDs and assuring that adequate protections for consumers and businesses are put in place. If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration.

Sincerely,

Jeffrey W. Bullock
Secretary of State

Leslie Reynolds, Executive Director, NASS

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dot Registry, LLC
Application ID	1-880-39342
Applied for TLD (string)	.CORP

Response:

As the only community applicant for the .CORP extension, Dot Registry, LLC is acutely aware of the need for safeguards and registration policies that will ensure the long term integrity of the .CORP gTLD for both registrants and consumers.

Dot Registry’s mission of building confidence, trust, reliance and loyalty for consumers and business owners alike; by creating a dedicated gTLD to specifically serve the Community of Registered Corporations is supported through their registry service, registration policies, dispute resolution processes, and ICANN required rights protection mechanisms. Dot Registry will foster consumer peace of mind with confidence. By ensuring that all domains bearing our gTLD string are members of the Registered Community of US Corporations. Our verification process will create an unprecedented level of security for online consumers by authenticating each of our registrant’s right to conduct business in the United States. The “.CORP” gTLD will fill a unique void in the current DNS and assist in decreasing the burden on existing domain names, by identifying members of the Registered Community of Corporations.

The social implications of business identity theft and consumer confusion are a paramount concern to DOT Registry. In our currently unstable economy, stimulating economic growth is vital. One means to such growth is by defusing the rampant, legitimate fear caused by online crimes and abuse, which leads to curtailed consumer behavior. By introducing the “.CORP” domain into the DNS, DOT Registry will attempt to reduce the social impact of identity theft on business owners which will in turn reduce consumer fears related to spending and ultimately boost economic growth in regards to consumption and purchase power.

Dot Registry’s application currently contains the following registration policies and naming conventions, which directly address the concerns listed by GAC in their April 11th advice (the below excerpts are pulled directly from our application response to question 18):

GAC Advice Response Form for Applicants

- 1) A Registrant will only be awarded the “.CORP” domain that matches or includes a substantial part of the Registrant’s legal name. For example, Blue Star Partners, Inc. would be able to purchase either BlueStarPartners.CORP or BlueStar.CORP.
- 2) Registrants will not be allowed to register product line registrations, regardless of the products affiliation to the corporation. All awarded domains must match or include a substantial part of the Registrant’s legal name.
- 3) If there are registrants applying for the same domain names, which correspond to their legal business names as registered in different states, then the “.CORP” domain will be awarded on a first-come, first-served basis to the first registrant.
- 4) However, if a registrant has a trademark registered with the United States Patent and Trademark Office (USPTO), then such registrant will have priority over any other registrant to be awarded the applied for “.CORP” domain.
- 5) If a registrant’s “.CORP” domain has already been awarded to another registrant with the same or similar legal name, then DOT Registry will offer to award such registrant a “.CORP” domain with a distinctive denominator including but not limited to a tag, company describer, or name abbreviation. For example, if BlueStar.CORP was awarded to Blue Star Partners, Inc. of California, then Blue Star Partners, Inc. of Kansas would be offered the opportunity to use BlueStarPartners.CORP.
- 6) DOT Registry will work closely with the Secretary of State’s Offices throughout the United States, with NASS and with a number of other agencies and organizations in maintaining the integrity and security of its domain names. DOT Registry will utilize the Secretary of States’ online resources to confirm that companies applying for their “.CORP” domain are in fact registered businesses.
- 7) All registrants that are awarded the “.CORP” domain will agree to a one-year minimum contract for their domain names that will automatically renew for an additional year on an annual basis if such contract is not terminated prior to the expiration of the renewal date.
- 8) DOT Registry or it’s designated agent will annually verify each registrants community status. Verification will occur in a process similar to the original registration process for each registrant, in which the registrars will verify each registrant’s “Active” Status with the applicable state authority. Each registrar will evaluate whether its registrants can still be considered “Active” members of the Community of Registered Corporations. In this regard, the following items would be considered violations of DOT Registry’s Registration Guidelines, and may result in dissolution of a registrant’s awarded “.CORP” domain:
 - (a) If a registrant previously awarded the “.CORP” domain ceases to be registered with the State.
 - (b) If a registrant previously awarded a “.CORP” domain is dissolved and/or forfeits the domain for any reason.
 - (c) If a registrant previously awarded the “.CORP” domain is administratively dissolved by the State.Any registrant found to be “Inactive,” or which falls into scenarios (a) through (c) above, will be issued a probationary warning by their registrar, allowing for the registrant to restore its active status or resolve its dissolution with its applicable Secretary of State’s office. If the registrant is unable to restore itself to “Active” status within the defined probationary period, their previously assigned “.CORP” will be forfeited. DOT Registry reserves the right to change the definition of “Active” in accordance with the policies of the Secretaries of State. Domains will be temporarily suspended during the review process.
- 9) If DOT Registry discovers that a registrant wrongfully applied for and was awarded a “.CORP” domain, then such “.CORP” will be immediately forfeited to DOT Registry. Wrongful

application includes but is not limited to: a registrant misrepresenting itself as a member of the Community of Registered Corporations, a registrant participating in illegal or fraudulent actions, or where a registrant would be in violation of our abuse policies described in Question 28 (including promoting or facilitating spam, trademark or copyright infringement, phishing, pharming, willful distribution of malware, fast flux hosting, botnet command and control, distribution of pornography, illegal access to other computers or networks, and domain kiting/tasting).

10) In the case of domain forfeiture due to any of the above described options, all payments received by the Registrant for registration services to date or in advance payment will be non-refundable.

11) All registration information will be made publicly available. DOT Registry will not accept blind registration or registration by proxy. DOT Registry's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement. Additionally, DOT Registry will provide a Web-based WHOIS application, which will be located at www.whois.CORP. The WHOIS Web application will be an intuitive and easy to use application which will allow the general public to easily access registration information for each ".CORP" site. A complete description of these services can be found in Question 26 below.

12) Awarded names are non-transferrable to entities outside of the designated community, regardless of affiliation to any member of the community. In the event that a registrant's business entity merges, is acquired, or sold, the new entity will be allowed to maintain the previously awarded ".CORP" domain until the domain renewal date, at which point they will be evaluated as described in number seven (7) above. Further, any entity acquiring a ".CORP" domain through the processes described in this guideline that does not meet the registration criteria and wishes to maintain the awarded domain will be allowed a grace period after the renewal verification process to correct any non-compliance issues in order to continue operating their acquired domain. If the said entity is unable to comply with DOT Registry's guidelines, the awarded domain will be revoked.

13) If an application is unable to be verified or does not meet the requirements of the sponsored community, the application will be considered invalid. In addition to Applicant's comprehensive eligibility, verification, and policing mechanisms, DOT Registry will implement a series of Rights Protection Mechanisms (RPM), including but not limited to: Support for and interaction with the Trademark Clearinghouse ("Clearinghouse"); use of the Trademark Claims Service; segmented Sunrise Periods allowing for the owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks; subsequent Sunrise Periods to give trademark owners or registrants that own the rights to a particular name the ability to block the use of such name; and stringent take down policies and all required dispute resolution policies. Dot Registry's dispute resolution processes, rights protection mechanisms, trademark clearing house procedures and whois verification information are further supported in their application in the following sections:

Question 22

Protection of Geographic Names at the Second Level of your proposed gTLD

Applicant has thoroughly reviewed ISO 3166-1 and ISO 3166-2, relevant UN documents on the standardization of geographic names, GAC correspondence relating to the reservation of geographic names in the .INFO TLD, and understands its obligations under Specification 5 of the

draft Registry Agreement. Applicant shall implement measures similar to those used to protect geographic names in the .INFO TLD by reserving and registering to itself all the geographic place names found in ISO-3166 and official country names as specified by the UN. Applicant has already discussed this proposed measure of protecting geographic names with its registry services provider, Neustar, and has arranged for such reservation to occur as soon after delegation as is technically possible.

Question 26

Whols Compliance

As with the .INFO TLD, only if a potential second-level domain registrant makes a proper showing of governmental support for country or territorial names will Applicant then relay this request to ICANN. At this point, Applicant would wait for the approval of the GAC and of ICANN before proceeding to delegate the domain at issue.

Applicant recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders, and the public as a whole, and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement and relevant RFCs.

Applicant's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs, and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, the WHOIS service provided by Applicant's registry services operator has been designed from the ground up to display as much information as required by ICANN and respond to a very stringent availability and performance requirement.

Some of the key features of Applicant's WHOIS services will include:

- Fully compliant with all relevant RFCs including 3912;
- Production proven, highly flexible, and scalable (applicant's back-end registry services provider has a track record of 100% availability over the past 10 years);
- Exceeds current and proposed performance specifications;
- Supports dynamic updates with the capability of doing bulk updates;
- Geographically distributed sites to provide greater stability and performance; and
- Search capabilities (e.g., IDN, registrant data) that mitigate potential forms of abuse as discussed below.

Applicant's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

Applicant's WHOIS service will support port 43 queries, and will be optimized for speed using an in-memory database and a master-slave architecture between SRS and WHOIS slaves. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Applicant's registry services operator currently processes millions of WHOIS queries per day.

GAC Advice Response Form for Applicants

In addition to the WHOIS Service on port 43, Applicant will provide a Web-based WHOIS application, which will be located at www.whois.CORP. This WHOIS Web application will be an intuitive and easy to use application for the general public to use. The WHOIS Web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

The WHOIS web application will also provide features not available on the port 43 service. These include:

- Extensive support for international domain names (IDN)
- Ability to perform WHOIS lookups on the actual Unicode IDN
- Display of the actual Unicode IDN in addition to the ACE-encoded name
- A Unicode to Punycode and Punycode to Unicode translator
- An extensive FAQ
- A list of upcoming domain deletions

Applicant will also provide a searchable web-based WHOIS service in accordance with Specification 4 Section 1.8 The application will enable users to search the WHOIS directory to find exact or partial matches using any one or more of the following fields:

- Domain name
- Contacts and registrant's name
- Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)
- Registrar ID
- Name server name and IP address
- Internet Protocol addresses
- The system will also allow search using non-Latin character sets which are compliant with IDNA specification

The WHOIS user will be able to choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria and their WHOIS information will quickly be returned to the user.

In order to reduce abuse for this feature, only authorized users will have access to the Whois search features after providing a username and password.

Applicant will provide third party access to the bulk zone file in accordance with Specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider, which will make access to the zone files in bulk via FTP to any person or organization that signs and abides by a Zone File Access (ZFA) Agreement with the registry. Contracted gTLD registries will provide this access daily and at no charge.

Applicant will also provide ICANN and any emergency operators with up-to-date Registration Data on a weekly basis (the day to be designated by ICANN). Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, unless ICANN requests other means in the future. Applicant's Legal Team will regularly monitor the registry service provider to ensure that they are providing the services as described above. This will entail random monthly testing of the WHOIS port 43 and Web-based services to ensure that they meet the ICANN Specifications and

GAC Advice Response Form for Applicants

RFCs as outlined above, if not, to follow up with the registry services provider to ensure that they do. As the relevant WHOIS will only contain Applicant's information, Applicant's WHOIS services will necessarily be in compliance with any applicable privacy laws or

Question 28

Abuse Prevention and Mitigation

General Statement of Policy

Abuse within the registry will not be tolerated. DOT Registry will implement very strict policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. DOT Registry's homepages will provide clear contact information for its Abuse Team, and in accordance with ICANN policy DOT Registry shall host NIC.CORP, providing access to .CORP's Whois services, the Abuse Policy, and contact information for the Abuse Team.

Anti-Abuse Policy

DOT Registry will implement in its internal policies and its Registry-Registrar Agreements (RRAs) that all registered domain names in the TLD will be subject to a Domain Name Anti-Abuse Policy ("Abuse Policy").

The Abuse Policy will provide DOT Registry with broad power to suspend, cancel, or transfer domain names that violate the Abuse Policy. DOT Registry will publish the Abuse Policy on its home website at NIC.CORP and clearly provide DOT Registry's Point of Contact ("Abuse Contact") and its contact information. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of abuse complaints, and a telephone number and mailing address for the primary contact. DOT Registry will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made.

In addition, with respect to inquiries from ICANN-Accredited registrars, the Abuse Contact shall handle requests related to abusive domain name practices.

Inquiries addressed to the Abuse Contact will be routed to DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy as described in more detail below. DOT Registry will catalog all abuse communications in its CRM software using a ticketing system that maintains records of all abuse complaints indefinitely. Moreover, DOT Registry shall only provide access to these records to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

The Abuse Policy will state, at a minimum, that DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to ; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Registry, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, registry services provider, or any registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant's

GAC Advice Response Form for Applicants

pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.

The Abuse Policy will define the abusive use of domain names to include, but not be limited to, the following activities:

- **Illegal or fraudulent actions:** use of the DOT Registry's or Registrar's services to violate the laws or regulations of any country, state, or infringe upon the laws of any other jurisdiction, or in a manner that adversely affects the legal rights of any other person;
- **Spam:** use of electronic messaging systems from email addresses from domains in the TLD to send unsolicited bulk messages. The term applies to e-mail spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of Web sites and Internet forums;
- **Trademark and Copyright Infringement:** DOT Registry will take great care to ensure that trademark and copyright infringement does not occur within the .CORP TLD. DOT Registry will employ notice and takedown procedures based on the provisions of the Digital Millennium Copyright Act (DMCA) ;
- **Phishing:** use of counterfeit Web pages within the TLD that are designed to trick recipients into divulging sensitive data such as usernames, passwords, or financial data;
- **Pharming:** redirecting of unknowing users to fraudulent Web sites or services, typically through DNS hijacking or poisoning;
- **Willful distribution of malware:** dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and trojan horses.
- **Fast flux hosting:** use of fast-flux techniques to disguise the location of Web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities. Fast-flux techniques use DNS to frequently change the location on the Internet to which the domain name of an Internet host or name server resolves. Fast flux hosting may be used only with prior permission of DOT Registry;
- **Botnet command and control:** services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct denial-of-service attacks (DDoS attacks);
- **Distribution of pornography;**
- **Illegal Access to Other Computers or Networks:** illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity);
- **Domain Kiting/Tasting:** registration of domain names to test their commercial viability before returning them during a Grace Period;
- **High Volume Registrations/Surveying:** registration of multiple domain names in order to warehouse them for sale or pay-per-click websites in a way that can impede DOT Registry from offering them to legitimate users or timely services to other subscribers;
- **Geographic Name:** registering a domain name that is identical to a Geographic Name, as defined by Specification 5 of the Registry Agreement;
- **Inadequate Security:** registering and using a domain name to host a website that collects third-party information but does not employ adequate security measures to protect

GAC Advice Response Form for Applicants

third-party information in accordance with that geographic area's data and financial privacy laws;

- Front Running: registrars mining their own web and Whois traffic to obtain insider information with regard to high-value second-level domains, which the registrar will then register to itself or an affiliated third party for sale or to generate advertising revenue;
- Whois Accuracy: Intentionally inserting false or misleading Registrant information into the TLD's Whois database in connection with the bad faith registration and use of the domain in question;
- Whois Misuse: abusing access to the Whois database by using Registrant information for data mining purposes or other malicious purposes;
- Fake Renewal Notices; misusing Whois Registrant information to send bogus renewal notices to Registrants on file with the aim of causing the Registrant to spend unnecessary money or steal or redirect the domain at issue.

Domain Anti-Abuse Procedure

DOT Registry will provide a domain name anti-abuse procedure modeled after the DMCA's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.CORP the Abuse Policy and the contact information for the Abuse Contact. Inquiries addressed to the Point of Contact will be addressed to and received by DOT Registry's Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy. DOT Registry will catalog all abuse communications and provide them to third parties only under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any correspondence ("Complaint") from a complaining party ("Complainant") to the Abuse Contact will be ticketed in DOT Registry's CRM software and relayed to DOT Registry's Abuse Team. A member of DOT Registry's Abuse Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email and that DOT Registry will notify the Complainant of the results of the Complaint within ten (10) days of receiving the Complaint.

DOT Registry's Abuse Team will review the Complaint and give it a "quick look" to see if the Complaint reasonably falls within an abusive use as defined by the Abuse Policy. If not, the Contact will write an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated abusive uses as defined by the Abuse Policy and that DOT Registry considers the matter closed.

If the quick look does not resolve the matter, DOT Registry's Abuse Team will give the Complaint a full review. Any Registrant that has been determined to be in violation of DOT Registry policies shall be notified of the violation of such policy and their options to cure the violation. Such notification shall state:

- 1) the nature of the violation;
- 2) the proposed remedy to the violation;
- 3) the time frame to cure the violation; and

4) the Registry's options to take subsequent action if the Registrant does not cure the violation.

If an abusive use is determined DOT Registry's Abuse Team will alert its Registry services team to immediately cancel the resolution of the domain name. DOT Registry's Abuse Team will immediately notify the Registrant of the suspension of the domain name, the nature of the complaint, and provide the Registrant with the option to respond within ten (10) days or the domain will be canceled.

If the Registrant responds within ten (10) business days, it's response will be reviewed by the DOT Registry's Abuse Team for further review. If DOT Registry's Abuse Team is satisfied by the Registrant's response that the use is not abusive, DOT Registry's Abuse Team will submit a request by the registry services provider to reactivate the domain name. DOT Registry's Abuse Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the Registrant does not respond within ten (10) business days, DOT Registry will notify the registry services team to cancel the abusive domain name.

This Anti-Abuse Procedure will not prejudice either party's election to pursue another dispute mechanism, such as URS or UDRP.

With the resources of DOT Registry's registry services personnel, DOT Registry can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one (1) business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, questions, or comments concerning the request, and an outline of the next steps to be taken by Application for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by DOT Registry and involves the type of activity set forth in the Abuse Policy, the sponsoring registrar is then given forty-eight (48) hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 48-hour period (i.e., is unresponsive to the request or refuses to take action), DOT Registry will place the domain on "serverHold".

Maintenance of Registration Criteria

If a Registrant previously awarded the ".CORP" domain ceases to be registered with a Secretary of State or legally applicable jurisdiction, such Registrant will be required to forfeit the assigned ".CORP" domain at their designated renewal date.

If DOT Registry discovers that a Registrant wrongfully applied for and was awarded a ".CORP" domain, then such ".CORP" will be immediately forfeited to DOT Registry.

If a Registrant previously awarded a ".CORP" domain is dissolved and/or forfeited for any reason, then such ".CORP" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".CORP" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".CORP" will be forfeited to DOT

GAC Advice Response Form for Applicants

Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

A Registrant's "Active" Status will be verified annually. Any Registrant not considered "Active" by the definition listed above in question 18 will be given a probationary warning, allowing time for the Registrant to restore itself to "Active" Status. If the Registrant is unable to restore itself to "Active" status within the defined probationary period, their previously assigned ".CORP" will be forfeited. In addition, DOT Registry's definition of "Active" may change in accordance with the policies of the Secretaries of State.

Orphan Glue Removal

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often supports correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in the DNS. Therefore, when DOT Registry has written evidence of actual abuse of orphaned glue, DOT Registry will take action to remove those records from the zone to mitigate such malicious conduct.

DOT Registry's registry service operator will run a daily audit of entries in its DNS systems and compare those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either DOT Registry or its registry services operator becomes aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

Whols Accuracy

DOT Registry will provide Whols accessibility in a reliable, consistent, and predictable fashion in order to promote Whois accuracy. The Registry will adhere to port 43 Whois Service Level Agreements (SLAs), which require that port 43 WHOIS service be highly accessible and fast.

DOT Registry will offer thick Whols services, in which all authoritative Whols data—including contact data—is maintained at the registry. DOT Registry will maintain timely, unrestricted, and public access to accurate and complete Whols information, including all data objects as specified in Specification 4. Moreover, prior to the release of any domain names, DOT Registry's registrar will provide DOT Registry with an authorization code to verify eligible Registrants provide accurate Registrant contact information.

In order to further promote Whois accuracy, DOT Registry will offer a mechanism whereby third parties can submit complaints directly to the DOT Registry (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete Whois data. Such information shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to cancel or suspend the applicable domain name(s) should DOT Registry determine that the domains are being used in a manner contrary to DOT Registry's abuse policy.

DOT Registry shall also require authentication and verification of all Registrant data. DOT Registry shall verify the certificates of incorporation, whether a corporation is in active status, contact information, e-mail address, and, to the best of its abilities, determine whether address information supplied is accurate. Second-level domains in the TLD shall not be operational unless two (2) out of three (3) of the above authentication methods have been satisfied.

With regard to registrars, DOT Registry shall provide financial incentives for pre-authentication of Registrant data prior to such data being passed to the registry. DOT Registry will provide for lower renewal and bulk registration fees in its RRAs for registrations which have been pre-authenticated and which DOT Registry can rely on as accurate data to be entered into its Whois database. Also in its RRAs, DOT Registry will also provide for higher fees and penalties for Registrant data which is obscured by proxies.

DOT Registry will also maintain historical databases of Registrants and associated information which have provided inaccurate Whois information. DOT Registry will endeavor to use this database to uncover patterns of suspicious registrations which DOT Registry shall then flag for further authentication or for review of the Registrant's use of the domain in question to ensure Registrant's use is consonant with DOT Registry's abuse policy.

In addition, DOT Registry's Abuse Team shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of domain names within the applied-for TLD to test the accuracy of the Whois information. Although this will not include verifying the actual information in the WHOIS record, DOT Registry will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, the DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to suspend the applicable domain name(s) should DOT Registry determine that the Registrant is using the domain in question in a manner contrary to DOT Registry's abuse policy. DOT Registry shall also reserve the right to report such recalcitrant registrar activities directly to ICANN.

GAC Advice Response Form for Applicants

All domain name Registrants will have adequate controls to ensure proper access to domain functions.

In addition to the above, all domain name Registrants in the applied-for TLD will be required to name at least two (2) unique points of contact who are authorized to request and/or approve update, transfer, and deletion requests. The points of contact must establish strong passwords with the registrar that must be authenticated before a point of contact will be allowed to process updates, transfer, and deletion requests. Once a process update, transfer, or deletion request is entered, the points of contact will automatically be notified when a domain has been updated, transferred, or deleted through an automated system run by DOT Registry's registrar. Authentication of modified Registrant information shall be accomplished 48 Hours.

Question 29

Rights Protection Mechanisms

DOT Registry is committed to implementing strong and integrated Rights Protection Mechanisms (RPM). Use of domain names that infringe upon the legal rights of others in the TLD will not be tolerated. The nature of such uses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. DOT Registry will protect the legal rights of others by implementing RPMs and anti-abuse policies backed by robust responsiveness to complaints and requirements of DOT Registry's registrars.

Trademark Clearinghouse

Each new gTLD Registry will be required to implement support for, and interaction with, the Trademark Clearinghouse ("Clearinghouse"). The Clearinghouse is intended to serve as a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. The data maintained in the Clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service.

Utilizing the Clearinghouse, all operators of new gTLDs must offer: (i) a Sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a Trademark Claims Service for at least the first 60 days that second-level registrations are open. The Trademark Claims Service is intended to provide clear notice to a potential registrant of the rights of a trademark owner whose trademark is registered in the Clearinghouse.

Sunrise A Period

DOT Registry will offer segmented Sunrise Periods. The initial Sunrise Period will last [minimum 30 days] for owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks. All domain names registered during the Sunrise Period will be subject to DOT Registry's domain name registration policy, namely, that all registrants be validly registered corporations and all applied-for domains will only be awarded the ".LLC" domain that matches or includes a substantial part of the Registrant's legal name. DOT Registry will assign its Rights Protection Team; which is lead by our Director of Legal and

GAC Advice Response Form for Applicants

Policy and further supported by two dedicated employees to receive and authenticate all Sunrise Registrations.

DOT Registry's registrar will ensure that all Sunrise Registrants meet sunrise eligibility requirements (SERs), which will be verified by Clearinghouse data. The proposed SERs include: (i) ownership of a mark that is (a) nationally or regionally registered and for which proof of use, such as a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (b) that have been court-validated; or (c) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008, (ii) optional registry elected requirements concerning international classes of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

Upon receipt of the Sunrise application, DOT Registry will issue a unique tracking number to the Registrar, which will correspond to that particular application. All applications will receive tracking numbers regardless of whether they are complete. Applications received during the Sunrise period will be accepted on a first-come, first-served basis and must be active corporations in good standing before they may be awarded the requested domain, or able to proceed to auction. Upon submission of all of the required information and documentation, registrar will forward the information to DOT Registry's [RPM Team] for authentication. DOT Registry's [RPM Team] will review the information and documentation and verify the trademark information, and notify the potential registrant of any deficiencies. If a registrant does not cure any trademark-related deficiencies and/or respond by the means listed within one (1) week, DOT Registry will notify its registrar and the domain name will be released for registration. DOT Registry will incorporate a Sunrise Dispute Resolution Policy (SDRP). The SDRP will allow challenges to Sunrise Registrations by third parties for a ten-day period after acceptance of the registration based on the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national or regional effect or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

After receiving a Sunrise Complaint, DOT Registry's [RPM Team] will review the Complaint to see if the Complaint reasonably asserts a legitimate challenge as defined by the SDRP. If not, DOT Registry's [RPM Team] will send an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated grounds as defined by the SDRP and that DOT Registry considers the matter closed.

If the domain name is not found to have adequately met the SERs, DOT Registry's [RPM Team] will alert the registrar and registry services provider to immediately suspend the resolution of the domain name. Thereafter, DOT Registry's [RPM Team] will immediately notify the Sunrise Registrant of the suspension of the domain name, the nature of the complaint, and provide the

GAC Advice Response Form for Applicants

registrant with the option to respond within ten (10) days to cure the SER deficiencies or the domain name will be canceled.

If the registrant responds within ten (10) business days, its response will be reviewed by DOT Registry's [RPM Team] to determine if the SERs are met. If DOT Registry's [RPM Team] is satisfied by the registrant's response, DOT Registry's [RPM Team] will submit a request to the registrar and the registry services provider to unsuspend the domain name. DOT Registry's [RPM Team] will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial.

Names secured as described through the Sunrise AT/AD processes will result in the registration of resolving domain names at the registry. Names reserved through the Sunrise B process will not result in resolving domain name at DOT Registry. Rather, these names will be reserved and blocked from live use. The applied for string will resolve to an informational page informing visitors that the name is unavailable for registration and reserved from use.

Applications that fit the following criteria will be considered during the Sunrise A period:

Applicant owns and operates an existing domain name in another gTLD or ccTLD, in connection with eligible commerce and satisfies the registration requirements described in Section 1.

Sunrise B

Applications that fit the following criteria will be considered during the Sunrise B period:

- a) Applicant holds valid trademark registrations or owns rights to a particular name and wishes to block the use of such name.
- b) The Applicant must seek to block a name that corresponds to the entire text of its trademark or the complete textual component of a graphical or compound trademark. Certain variances are permitted for trademarks containing spaces or special characters that are not available for domain names.

Any entity, applying for blocks under Sunrise B as a non-member of the sponsored community cannot apply for names in the TLD.

Founder's Program

Applications for the Founder's Program will be accepted after the close of the Sunrise Periods. Potential registrants should understand that certain expectations, as described herein will accompany the issuance of a domain name under the Founder's Program and all registrations resulting from this program will be required to follow the below listed guidelines, which will be further described in their Program Agreement:

- a) Registrants awarded a domain through the Founder's Program must use their best efforts to launch a ".LLC" website within 30 days of signing the Program Agreement.
- b) In addition, each registrant will be required to issue a press release announcing the launch of their ".LLC" Founder Website, concurrent with the launch of their .CORP Founder Website, said press release must be approved by DOT Registry;
- c) Founder's websites should be kept good working order, with unique, meaningful content, user-friendly interfaces, and broad user appeal, for the duration of the License Term,
- d) Founders are expected to proactively market and promote ".LLC" gTLD in a manner that is likely to produce widespread awareness of the unique advantages gained through the ".LLC" string.
- e) Founders are expected to participate in reasonable joint marketing initiatives with DOT Registry or its Agents, these would be discussed and mutually agreed upon, given the unique circumstances of each marketing venture.

f) Founders will allow DOT Registry to use in good faith Founder's name, likeness, trademarks, logos, and Application contents (other than Confidential Information,) as well as other Founder information and content as may be mutually agreed, in DOT Registry's marketing, promotional and communications materials.

DOT Registry will randomly verify compliance of the above listed expectations and have the right to revoke any Founder's site, should they be deemed non-compliant.

Landrush

Landrush is a limited time opportunity for companies that want to secure a high value ".LLC" name for a small fee (above the basic registration cost). The landrush period will last 30 days. Applications will be accepted and evaluated to determine if they meet the requirements for registration. At the end of the Landrush period domain names with only one application will be awarded directly to the DOT Registry. Domain names with two or more applications will proceed to a closed mini auction, between the respective DOT Registries, where the highest bidder wins.

General Availability Period

DOT Registry must meet registration requirements.

Names will be awarded on a first-come, first serve basis which is determined as of the time of the initial request, not when authentication occurs.

Domain Name Contentions

Name contentions will arise when both a Sunrise A and Sunrise B application are submitted for the same name, the following actions will be taken to resolve the contention.

a) Both DOT Registries will be notified of the contention and the Sunrise A DOT Registry will be given first right to either register their requested domain or withdraw their application. Since ".LLC" is a sponsored community domain for registered Corporations, a domain applied for under Sunrise A will, all else being equal, receive priority over the identical domain applied for under Sunrise B. Sunrise A names get priority over Sunrise B names.

b) If the Sunrise A DOT Registry chooses to register their name regardless of the contention, then the Sunrise B DOT Registry may choose to pursue further action independently of DOT Registry to contest the name.

c) If two Sunrise A DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet both seek to be awarded the use of DELTA.CORP) then DOT Registry will notify both DOT Registries of the contention and proceed to an auction process as described in Section 9.

d) If a Sunrise A DOT Registry and a Landrush DOT Registry apply for the same domain name, the Sunrise A DOT Registry, all else being equal will have priority over the Landrush DOT Registry.

e) If two Sunrise B DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet, both seek to block the use of DELTA. INC), then DOT Registry will accept both applications as valid and block the use of the indicated domain.

Appeal of Rejected Sunrise Applications

An DOT Registry can file a request for reconsideration within 10 days of the notification of DOT Registry's rejection. Reconsideration can be requested by completing a reconsideration form and filing a reconsideration fee with DOT Registry. Forms, fee information, and process documentation will be available on the DOT Registry website. Upon receipt of the reconsideration form and the corresponding fee, DOT Registry or its Agents will re-examine the application, and notify the Registrant of all findings or additional information needed. The Request for Reconsideration must be submitted through the Registrant's registrar, and a reconsideration fee must be paid to DOT Registry.

Auctions

Sunrise A names found to be in contention as described above will result in Auction. DOT Registry plans to have a qualified third party conduct our auction processes, therefore the rules contained in this document are subject to change based on the selection of an auctioneer:

a) When your auction account is created, it will be assigned a unique bidder alias in order to ensure confidential bidding. The bidder alias will not reflect any information about your account. You may change your bidder alias to a name of your choosing but once set, it cannot be changed again.

b) All auction participants are expected to keep their account information current, throughout the auction process.

c) Auction participants will receive up to date communication from the auctioneer as the auction progresses, bidding status changes, or issues arise.

d) Bidding

i) Auctions will follow a standard process flow: scheduled (upcoming), open and closed.

ii) You will receive an "Auction Scheduled" notice at least ten (10) days prior to the scheduled auction start date. You will receive an "Auction Start" notice on the auction start date, which will indicate that you may begin placing bids through the interface. Once closed, the auction is complete and if you are the winning bidder, you will proceed to the payment process.

iii) If you choose to bid for a particular domain and you are the highest bidder at the end of an auction, you are obligated to complete the transaction and pay the Auctioneer the amount of your winning bid. Carefully consider your bids prior to placing them - bids are not retractable under any circumstances.

iv) If no bids are placed on a particular domain, the Registry will register the domain on behalf of the first customer (in the respective phase) to submit an application through a registrar.

e) Extensions

i) A normal auction period is anticipated to last a minimum of 7 (seven) days. However, in the event of significant auction activity, an auction close may extend during the last twenty-four (24) hours of scheduled operation to better need the volume of the auction.

ii) Auction extensions are meant to provide a mechanism that is fair for bidders in all time zones to respond to being outbid.

iii) An auction extension will occur whenever the auction lead changes in the last twenty four (24) hours of the schedule of an auction. The close will be revised to reflect a new closing time set at twenty four (24) hours after the change in auction lead occurred. Essentially, this means that a winning maximum bid has to remain unchallenged for a period of twenty four (24) hours before the auction will close.

iv) It is important to note that extensions are not simply based on the auction value changing since this could occur as a result of proxy bidding where the same bidder retains their lead. In this case, the maximum bid has not changed, the leader has not changed and therefore no extension will occur.

f) Payment Default

In the event that you as the winning bidder decide not to honor your payment obligations (or in the event of a reversal of payment or a charge back by a credit card company or other payment provider) on any outstanding balance, the Registry has the right to cancel any/all of your winning registrations for any .CORP domain name, regardless of whether they have been paid for or not. You do not have the right to "pick and choose" the names you wish to keep or not keep. Winning an auction creates an obligation to remit payment. Failure to remit payment is a breach of your agreement.. You will lose any previously won domains and will no longer be allowed to bid on any current or future auctions sponsored by DOT Registry. Participants are

encouraged therefore to consider carefully each bid submitted as any bid could be a winning bid.

Trademark Claims Service

DOT Registry will offer a Trademark Claims Service indefinitely to provide maximum protection and value to rights holders. The Trademark Claims Service will be monitored and operated by DOT Registry's RPM Team that will receive all communications regarding the Trademark Claims Service and catalog them. DOT Registry's registrar will review all domain name requests to determine if they are an identical match of a trademark filed with the Trademark Clearinghouse. A domain name will be considered an identical match when the domain name consists of the complete and identical textual elements of the mark, and includes domain names where (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) certain special characters contained within a trademark are spelled out with appropriate words describing it (e.g., @ and &); and (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name are either (i) omitted or (ii) replaced by spaces, hyphens or underscores. Domain names that are plural forms of a mark, or that merely contain a mark, will not qualify as an identical match.

If the registrar determines that a prospective domain name registration is identical to a mark registered in the Trademark Clearinghouse, the registrar will be required to email a "Trademark Claims Notice" (Notice) in English to the protective registrant of the domain name and copy DOT Registry's RPM Team. The Notice will provide the prospective registrant information regarding the trademark referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. The Notice will be provided in real time without cost to the prospective registrant.

After receiving the notice, the registrar will provide the prospective registrant five (5) days to reply to the Trademark Claims Service with a signed document that specifically warrants that: (i) the prospective registrant has received notification that the mark is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant's knowledge the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice. If the warranty document satisfies these requirements, the registrar will effectuate the registration and notify DOT Registry's RPM Team.

After the effectuation of a registration that is identical to a mark listed in the Trademark Clearinghouse, the registrar will provide clear notice to the trademark owner consisting of the domain name that has been registered and copy DOT Registry's RPM Team. The trademark owner then has the option of filing a Complaint under the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS).

Uniform Rapid Suspension System (URS)

DOT Registry will specify in the Registry Agreement, all RRAs, and all Registration Agreements used in connection with the TLD that it and its registrars will abide by all decisions made by panels in accordance with the Uniform Rapid Suspension System (URS). DOT Registry's RPM Team will receive all URS Complaints and decisions, and will notify its registrar to suspend all registrations determined by a URS panel to be infringing within a commercially reasonable time

GAC Advice Response Form for Applicants

of receiving the decision. DOT Registry's RPM Team will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Uniform Domain Name Dispute Resolution Policy (UDRP)

DOT Registry will specify in the Registry Agreement, all Registry-Registrar Agreements, and Registration Agreements used in connection with the TLD that it will promptly abide by all decisions made by panels in accordance with the Uniform Domain Name Dispute Resolution Policy (UDRP). DOT Registry's RPM Team will receive all UDRP Complaints and decisions, and will notify its registrar to cancel or transfer all registrations determined to be infringing within ten (10) business days of receiving the decision. DOT Registry's [RPM Team] will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Proven Registrars

In order to reduce abusive registrations and other activities that affect the legal rights of others, DOT Registry will only contract with ICANN-accredited registrars. The registrar, according to the RRA, will not be able to register any domain names, thus eliminating the possibility of front-running.

Pre-Authorization and Authentication

Registrant authentication shall occur in accordance with the registration eligibility criteria and the Anti-Abuse Policy for .CORP as set forth in Question 28.

The verification process is designed to prevent a prospective registrant from providing inaccurate or incomplete data, such that, if necessary, the registrant can be readily contacted regarding an infringing use of its site; indeed, the process (including verification of a registrant's certificate of incorporation) is designed to ensure that only qualified members of the community are permitted to register in the TLD.

DOT Registry will not permit registrants to use proxy services.

Thick Whois

DOT Registry will include a thick Whois database as required in Specification 4 of the Registry agreement. A thick Whois provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

Grace Period

If a Registrant previously awarded a ".LLC" domain is dissolved and/or forfeited for any reason, then such ".LLC" domain will be forfeited to DOT Registry at their designated renewal time;

GAC Advice Response Form for Applicants

unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the “.LLC” domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such “.LLC” will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

Takedown Procedure

DOT Registry will provide a Takedown Procedure modeled after the Digital Millennium Copyright Act’s notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.CORP contact information for receiving rights protection complaints (Complaint) from rights holders, including but not limited to trademark and copyright Complaints. Complaints will be addressed to and received by DOT Registry’s RPM Team who will catalogue and ticket in DOT Registry’s CRM software and review as outlined herein. DOT Registry will catalog all rights protection communications and only provide them to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any Complaint from a rights holder will be relayed to DOT Registry’s RPM Team. A member of DOT Registry’s RPM Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email, and that DOT Registry will notify the Complainant of the results of the Complaint within (10) days of receiving the Complaint.

After sending the confirmation email, DOT Registry’s RPM Team will review the Complaint. If DOT Registry or its registrar determines that the registration was in bad faith, DOT Registry or its registrar may cancel or suspend the resolution of the domain name. Bad faith registration includes, but is not limited to, the registration of a domain identical to a registered trademark where the registrant has proceeded with registration after receipt of a Clearinghouse notice, as described above.

If the registrant responds within ten (10) business days, its response will be reviewed by the DOT Registry’s RPM Team. If DOT Registry’s RPM Team is satisfied by the registrant’s response that the content has been taken down or is not infringing, DOT Registry’s RPM Team will unsuspend the domain name. DOT Registry’s RPM Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the registrant does not respond within ten (10) business days, DOT Registry or its registrar may cancel or suspend the resolution of the domain name.

This Takedown Procedure will not prejudice any party’s election to pursue another dispute mechanism, such as URS or UDRP, as set forth in DOT Registry’s response to Question 28.

Further, Dot Registry has worked diligently to secure a strong relationship with the National Association of Secretaries of State (NASS) in order to accurately depict the necessary registration policies and programs that will protect the Community of Registered Corporations.

GAC Advice Response Form for Applicants

NASS was established in 1904 and is deemed the oldest non-partisan organization for public officials. Its membership consists of Secretaries of State and Lieutenant Governors responsible for the registration and maintenance of corporations in the US and its territories. Dot Registry has pledged to consult NASS throughout the life of the gTLD in regards to any changing state statutes, community admittance criteria, or policy adaptations in order to stay abridged of any changing state laws or registration guidelines. Additionally, Dot Registry is the only applicant who has established a relationship with the NASS or any Secretary of States Offices. As seen in our application and attached to this response the careful management of the .CORP gTLD is of vital importance to the Secretaries of State in the US. Dot Registry believes that the level of security necessary to responsibly operate this string can only be accomplished through a community gTLD. Further, Dot Registry is able to clearly define the registrants of this community, admittance requirements, commonality and has secured significant support from current members of the community. Further support of these assumptions can be seen in the attachments to question 20 of Dot Registry's application.

Subject: Letter of Support for the Restricted Use of the Top Level
Domains, ".INC", ".LLC", ".CORP", and ".LLP"

To Whom It May Concern,

This letter confirms that the Tennessee Secretary of State's Office is charged with registering businesses in the State of Tennessee. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses, which can be further divided into the following designations: The Community of Registered Corporations, the Community of Registered Limited Liability Companies and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With growing national concern about fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their respective Secretary of State's Office.

Sincerely,

A handwritten signature in blue ink, appearing to read "Tre Hargett".

RE: Restricted Use of Domains using .inc, .llc, .corp and .llp

TO WHOM IT MAY CONCERN;

My office is responsible for processing the organizational, amendatory and annual filings for Nevada corporations, limited liability companies, limited partnerships and other statutory business entities. These entities do business as Nevada entities not only in Nevada, but throughout the U.S. and around the world. My office is the second most popular business entity filing jurisdiction in the country, behind Delaware.

Fraudulent use of corporate entities, business identity theft and consumer protection are of growing concern to me, as is the potential of abuse by those offering online services. The free and unregulated issuance of names using these extensions is also a concern because of possible confusion or deception caused by entities that are not properly registered in my office.

It is my understanding that DOT Registry, LLC has applied to you for the use of the domain names with these extensions. I believe that restrictions and policies must be crafted not only to protect Nevada and U.S. entities, but also the consumers utilizing the associated web sites. I also understand that DOT Registry, LLC's application may include provisions protecting entities on file with my office, other Secretaries of State and state filing offices. Regardless of the applicant, such restrictions and protections must be in place.

I remain available if I can be of further assistance.

Respectfully,

A handwritten signature in blue ink that reads "Ross Miller".

Subject: Letter of support for the Restricted Use of the Top Level Domains, ".INC"
and ".LLC"

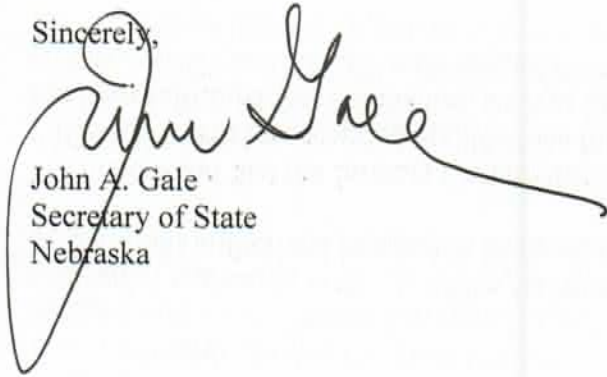

Ladies and Gentlemen:

This letter confirms that the State of Nebraska, Office of the Secretary of State, is charged with administering Nebraska's database of registered business entities. The companies registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with the Secretary of State.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a secretary of state or equivalent agency. It is important that registry companies provide access to the information provided by registered companies for jurisdictional purposes. Our office believes that such restrictions are integral to these strings and will object to the use of the strings, ".INC" and ".LLC" without any restrictions.

Sincerely,

John A. Gale

Dear Mr. Spurgeon,

I will not replicate the "form" letter on my letterhead that you requested for my signature in your e-mail message that I received today. It is not in a format or text that is comfortable for me.

However, because of my concern with the possible approval by ICANN of these extensions, I am willing to provide you with the enclosed letter. You may use it, as you deem appropriate.

By the way, NASS has not yet approved a letter, as referenced in your message. Although it was circulated through the membership of the Business Services Committee, the Executive Committee has not yet given final approval to the letter.

If Bill Clark or you have any questions or concerns about my letter, you are certainly welcomed to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

Washington DC 20005

To Whom It May Concern:

As the Secretary of State, I have the administrative oversight of various business entity registrations filed in my state.

It is my understanding that your organization (ICANN) is now accepting applications for a new expanded top level domain name program. I have learned that extensions such as .INC, .LLC, .LLP, and .CORP may be under consideration and that is of significant concern to me.

If ICANN considers approving these extensions, I respectfully request that they be approved and awarded to a company that has submitted an application that includes restrictions they will abide by, which would provide all of the possible protection for legitimate businesses and consumers from confusion or fraud.

All of these mentioned extensions are recognized under North Dakota state law as a means of identifying various types of business entities that are legally filed with my office. Therefore, it is important to ensure that the website domain name being considered for a business entity is only extended to a business entity that has a corresponding legal registration identified with that domain name. These business entities, with their registration, have lawfully earned the right to use these entity identifiers. That right should not be infringed about by any company or individual that has not obtained the legal use of them through the registration process in one of the states.

Therefore, along with my fellow members of the National Association of Secretaries of State (NASS), I am of the opinion that these extension identifiers should only be extended to entities in their respective states that are legally and appropriately registered with the Secretary of State, or the equivalent state agency.

During the past several months, the NASS Business Services Committee (of which I am a member) has been considering the proposed ICANN program and has been reviewing the potential impact these new extensions would have on existing businesses and new businesses registering with the various states.

As one member of the committee, I believe it is fundamental that NASS be consulted by companies such as DOT Registry or any other applicants regarding policy related to the registering and identifying of businesses as this expanded program is considered by ICANN. And, if ICANN approves these extensions, the successful recipient will agree to extend the new extensions only to a "community" of businesses appropriately and legally registered in one of the various states.

Without having appropriate restrictions in place, I would strongly oppose approving these extensions and awarding them to any company.

Sincerely,

A handwritten signature in cursive script, appearing to read "Al Jaeger".

ELAINE F. MARSHALL
SECRETARY OF STATE

February 13, 2012

Dot Registry
208 W 19th St
Kansas City, MO 64108

Dear Ladies and Gentlemen:

This letter advises that the Department of the Secretary of State of North Carolina is charged with overseeing the business formation process for the formation of corporations, limited liability companies (LLCs), non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of North Carolina's database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (ICANN) will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with their state's administrator.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a Secretary of State or equivalent agency. I believe that entities not appropriately registered and maintained in any state should be prohibited from strings that would misrepresent their existence. As most Secretaries of State are not equipped to verify legitimate entity existence, even though we maintain that information, the verification process should be a requirement, albeit not ours.

Sincerely,

A handwritten signature in cursive script that reads "Elaine F. Marshall".

JEFFREY W. BULLOCK
SECRETARY OF STATE

March 20, 2012

ICANN
Attn: gTLD Program
4676 Admiralty Way
Suite 330
Marina del Rey, CA 90292-6601

To Whom It May Concern:

As Delaware's Secretary of State, I administer the State's company registry and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities, such as corporations and limited liability companies, (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 63% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies around the world.

I understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new generic Top Level Domain (gTLD) name extensions this year. I have been informed that at least one firm – DOT Registry LLC – and possibly several other firms, plan to apply for the strings ".INC", ".CORP", ".LLC" and other potentially related extensions that state registries define as "company endings".

I join a chorus of federal and state officials who urge ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse. As such, it is absolutely critical that if ICANN determines to grant such name extensions, that it does so in a restricted manner that is intended to protect consumers and the community of interest that exists among validly registered U.S. companies and my fellow State secretaries of state and other State company registrars that are responsible for administering the nation's legal entity registration system.

ICANN – gTLD program
March 20, 2012

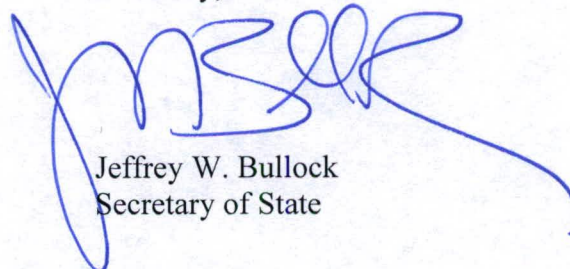

I therefore request that ICANN reject any request for the unrestricted use of “.INC”, “.LLC”, “.LLP”, “.CORP”, “.BANK”, “.TRUST” or similar commonly used company endings in the United States. The State of Delaware will object to the granting of such strings without restrictions.

I further request that, at a minimum, any approval for company ending strings be restricted in such a way that reasonably assures that the legal entity is, in fact, an active and validly registered legal entity in the United States, as DOT Registry LLC has proposed within its application. Specifically, any firm awarded the responsibility of administering such strings should be required to confirm whether the legal entity is validly formed according to criteria and documentation established by the states, and be required to check annually at renewal that the entity remains validly registered and actively in good standing according to criteria and documentation established by the states. The restrictions should further require that the homepage of such websites provide a mechanism that provides for the disclosure of the jurisdiction in which the entity is legally domiciled or include a geographic tag within the website name.

In order to reduce the risk of fraudulent activity, Delaware law places additional restrictions on the use of words such as “bank” and “trust” that are commonly associated with financial institutions. I therefore urge ICANN to seriously consider comment letters that have been submitted by the American Bankers Association and others urging ICANN to reject or place very significant restrictions on applications for the use of name extensions such as “.BANK” and “.TRUST”.

If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration of this request.

Sincerely,

Jeffrey W. Bullock
Secretary of State

Suzanne Radell
Senior Policy Advisor
National Telecommunications and Information Administration (NTIA)
Department of Commerce
1401 Constitution Ave. NW
Washington, DC 20230
SRadell@ntia.doc.gov

Dear Ms. Dryden and Ms. Radell:

As Delaware's Secretary of State, I administer the State's company registry, and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities such as corporations and limited liability companies (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 64% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies in North America and around the world.

In March of 2012, I imparted my concerns about ICANN's application review process for generic Top Level Domain (gTLDs) name extensions defined by state and provincial registries as "company endings". Such company endings include, but are not limited to, ".INC", ".CORP", ".LLP", ".LTD", ".GMBH", ".COMPANY" and "LLC". At that time, I joined a chorus of federal and state officials in the United States who had urged ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse.

Since expressing my initial concerns, I have followed the application and early warning process closely. More recently, I've learned of ICANN's new "Public Interest Commitments" (PIC) process and its associated "Public Interest Commitment Dispute Resolution Process" (PICDRS). Having the benefit of ICANN's response to my initial concerns and having reviewed the applications that have been submitted, I have no confidence that ICANN is interested in or capable of putting a system of clear and transparent enforcement mechanisms in place to ensure that "company endings" are not used for fraudulent or misleading purposes.

The responses I have received from ICANN and others have failed to acknowledge in any way the complex public policy questions raised by allowing gTLDs that use company endings. Instead, the responses have focused entirely on the process for filing objections to applications. The singular focus on an approval process rather than recognizing the serious policy implications associated with its granting of certain gTLDs calls into question whether ICANN is capable of evaluating, instituting and enforcing meaningful measures to protect consumers and legitimate legal entities from fraud and abuse.

Over 30 applications were submitted for various company endings, and while some of the applications include a proposed verification process, many do not. Only one applicant sought any input whatsoever from the affected community in my state and nationally. So it is no surprise that applicants that did propose a verification system failed to propose systems with enforceable mechanisms for safeguarding consumers, the public at large, state regulators, and the Internet itself from the types of fraud and abuse that are likely to occur in the absence of specific safeguards.

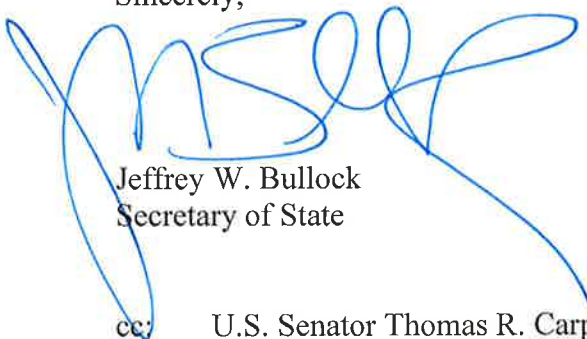

At this stage of the gTLDs process, I continue to believe that the public is best served if these company endings are not made available for use. I do not see an overriding public policy purpose or strong business case for ICANN to make them available – especially when hundreds of additional gTLDs are soon to become available.

It is also clear to me that any enforcement mechanism administered through ICANN is unlikely to provide the appropriate level of ongoing enforcement over the use of these sensitive gTLDs. The new PICDRS process, while no doubt well-intentioned, requires constant vigilance by the impacted community of company registrars. Not awarding these gTLDs is the preferred alternative. However, if such gTLDs are to be awarded and if there is going to be an effective and real-time enforcement mechanism, it must originate from the community with the greatest interest – namely, the company registrar

community represented in North America by organizations such as the International Association of Commercial Administrators (IACA) and the National Association of Secretaries of States (NASS) or in the case of non-U.S. endings such as .GMBH and .LTD with similar registrar communities elsewhere.

I am pleased to share these concerns and recommendations with you and I would welcome the opportunity to discuss them in greater detail. I am hoping that the GAC may be the appropriate vehicle for blocking the award of such gTLDs and assuring that adequate protections for consumers and businesses are put in place. If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration.

Sincerely,

Jeffrey W. Bullock

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dot Registry, LLC
Application ID	1-880-44249
Applied for TLD (string)	.LTD

Response:

Dot Registry, LLC is acutely aware of the need for safeguards and registration policies that will ensure the long term integrity of the .LTD gTLD for both registrants and consumers.

Dot Registry’s mission of creating a simple and intuitive alternative to .com with the intention of increasing the available name space in order to better accommodate the needs of Registrants. Additionally, the “.LTD” gTLD will be geared towards reaching business entities denoted by the abbreviation LTD, helping to establish a unique online delineator for global businesses operating under the “limited distinction. Through our registry service we will strive to provide consumer confidence by servicing a specific industry of businesses and accurately representing their entity type online.

The social implications of business identity theft and consumer confusion are a paramount concern to DOT Registry. In our currently unstable economy, stimulating economic growth is vital. One means to such growth is by defusing the rampant, legitimate fear caused by online crimes and abuse, which leads to curtailed consumer behavior. By introducing the “.LTD” domain into the DNS, DOT Registry will attempt to reduce the social impact of identity theft on business owners which will in turn reduce consumer fears related to spending and ultimately boost economic growth in regards to consumption and purchase power.

Dot Registry’s application currently contains the following registration policies and naming conventions, which directly address the concerns listed by GAC in their April 11th advice (the below excerpts are pulled directly from our application response to question 18):

- 1) “.LTD” registration will be restricted to businesses registered as Limited Companies.
- 2) Registrants will be asked to submit at minimum their registered business name, registered business address, registered agent or applicable administrative contact, country of organization, and agree to a statement indicating that they are indeed a registered limited company in the jurisdiction they have provided.

GAC Advice Response Form for Applicants

- 3) Registrants will only be awarded the “.LTD” domain that matches or includes a substantial part of the Registrant’s registered business name . For example, Blue Star Partners, LTD. would be able to purchase either BlueStarPartners.LTD or BlueStar.LTD.
- 4) If there are registrants applying for the same domain names, which correspond to their legal business names as registered in different jurisdictions, then the “.LTD” domain will be awarded on a first-come, first-served basis to the first registrant. If a registrant’s “.LTD” domain has already been awarded to another registrant with the same or similar legal name, then DOT Registry will offer to award such registrant a “.LTD” domain with a distinctive denominator including but not limited to a tag, company describer, or name abbreviation. For example, if BlueStar.LTD was awarded to Blue Star Partners, LTD. of Wales, then Blue Star Partners, LTD. of Kansas would be offered the opportunity to use BlueStarPartners.LTD.
- 5) However, if a registrant has a trademark registered with the United States Patent and Trademark Office (USPTO), then such registrant will have priority over any other registrant to be awarded the applied for “.LTD” domain.
- 6) Registrants will not be allowed to register product line registrations, regardless of the products affiliation to the limited company. All awarded domains must match or include a substantial part of the Registrant’s legal name.
- 7) If DOT Registry discovers that a registrant wrongfully applied for and was awarded a “.LTD” domain, then such “.LTD” will be immediately forfeited to DOT Registry. Wrongful application includes but is not limited to: a registrant misrepresenting itself as a limited company, a registrant participating in illegal or fraudulent actions, or where a registrant would be in violation of our abuse policies described in Question 28 (including promoting or facilitating spam, trademark or copyright infringement, phishing, pharming, willful distribution of malware, fast flux hosting, botnet command and control, distribution of pornography, illegal access to other computers or networks, and domain kiting/tasting).
- 8) Registrants will not be allowed to register names that infringe on the legal rights of other individuals or companies, allude to criminal activities, or contain in any part racially offensive language.
- 9) DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction (as more fully described in our Abuse Policies in question 28 below), or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Latin, LLC, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, LLC, registry services provider, or any Registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant’s pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.
- 10) DOT Registry’s registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

GAC Advice Response Form for Applicants

Additionally, DOT Registry will provide a Web-based WHOIS application, which will be located at www.whois.ltd. The WHOIS Web application will be an intuitive and easy to use application which will allow the general public to easily access registration information for each “.LTD” site. A complete description of these services can be found in Question 26 below.

11) All Registrants awarded a “.LTD” domain will agree to a one year minimum contract, which will need to be renewed on an annual basis. Renewal is the sole responsibility of the Registrant. Registrant’s failing to renew their awarded domains by their expiration dates will be given a sixty (60) day renewal grace period prior to their domain being revoked and returned to general availability.

12) DOT Registry, is not liable or responsible in any way for any errors, omissions or any other actions by any third party (including any Registrar service) arising out of or related to a given Registrant’s application for, registration of, renewal of, or failure to register or renew a particular domain name.

13) Through the registration process, all Registrants will be expected to designate an administrative contact for their application. This contact would possess all the rights granted by DOT Registry or its designated agents to act in respect to the given domain including, but not limited to, managing the domain name or any services associated thereto.

DOT Registry LLC will additionally implement a series of Rights Protection Mechanisms (RPM) included but not limited to: Support for and interaction with the Trademark Clearinghouse (“Clearinghouse”), use of the Trademark Claims Service, segmented Sunrise Periods allowing for the owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks, subsequent Sunrise Periods to give trademark owners or Registrant’s that own the rights to a particular name the ability to block the use of such name, stringent take- down services and Uniform Dispute Resolution Policies.

Question 22

Protection of Geographic Names at the Second Level of your proposed gTLD

Applicant has thoroughly reviewed ISO 3166-1 and ISO 3166-2, relevant UN documents on the standardization of geographic names, GAC correspondence relating to the reservation of geographic names in the .INFO TLD, and understands its obligations under Specification 5 of the draft Registry Agreement. Applicant shall implement measures similar to those used to protect geographic names in the .INFO TLD by reserving and registering to itself all the geographic place names found in ISO-3166 and official country names as specified by the UN. Applicant has already discussed this proposed measure of protecting geographic names with its registry services provider, Neustar, and has arranged for such reservation to occur as soon after delegation as is technically possible.

Question 26

Whols Compliance

As with the .INFO TLD, only if a potential second-level domain registrant makes a proper showing of governmental support for country or territorial names will Applicant then relay this

GAC Advice Response Form for Applicants

request to ICANN. At this point, Applicant would wait for the approval of the GAC and of ICANN before proceeding to delegate the domain at issue.

Applicant recognizes the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders, and the public as a whole, and is firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement and relevant RFCs.

Applicant's back-end registry services provider, Neustar, has extensive experience providing ICANN and RFC-compliant WHOIS services for each of the TLDs that it operates both as a Registry Operator for gTLDs, ccTLDs, and back-end registry services provider. As one of the first "thick" registry operators in the gTLD space, the WHOIS service provided by Applicant's registry services operator has been designed from the ground up to display as much information as required by ICANN and respond to a very stringent availability and performance requirement.

Some of the key features of Applicant's WHOIS services will include:

- Fully compliant with all relevant RFCs including 3912;
- Production proven, highly flexible, and scalable (applicant's back-end registry services provider has a track record of 100% availability over the past 10 years);
- Exceeds current and proposed performance specifications;
- Supports dynamic updates with the capability of doing bulk updates;
- Geographically distributed sites to provide greater stability and performance; and
- Search capabilities (e.g., IDN, registrant data) that mitigate potential forms of abuse as discussed below.

Applicant's registry services operator will provide thick WHOIS services that are fully compliant with RFC 3912 and with Specifications 4 and 10 of the Registry Agreement.

Applicant's WHOIS service will support port 43 queries, and will be optimized for speed using an in-memory database and a master-slave architecture between SRS and WHOIS slaves. RFC 3912 is a simple text based protocol over TCP that describes the interaction between the server and client on port 43. Applicant's registry services operator currently processes millions of WHOIS queries per day.

In addition to the WHOIS Service on port 43, Applicant will provide a Web-based WHOIS application, which will be located at www.whois.LTD. This WHOIS Web application will be an intuitive and easy to use application for the general public to use. The WHOIS Web application provides all of the features available in the port 43 WHOIS. This includes full and partial search on:

- Domain names
- Nameservers
- Registrant, Technical and Administrative Contacts
- Registrars

The WHOIS web application will also provide features not available on the port 43 service.

These include:

- Extensive support for international domain names (IDN)
- Ability to perform WHOIS lookups on the actual Unicode IDN

GAC Advice Response Form for Applicants

- Display of the actual Unicode IDN in addition to the ACE-encoded name
- A Unicode to Punycode and Punycode to Unicode translator
- An extensive FAQ
- A list of upcoming domain deletions

Applicant will also provide a searchable web-based WHOIS service in accordance with Specification 4 Section 1.8 The application will enable users to search the WHOIS directory to find exact or partial matches using any one or more of the following fields:

- Domain name
- Contacts and registrant's name
- Contact and registrant's postal address, including all the sub-fields described in EPP (e.g., street, city, state or province, etc.)
- Registrar ID
- Name server name and IP address
- Internet Protocol addresses
- The system will also allow search using non-Latin character sets which are compliant with IDNA specification

The WHOIS user will be able to choose one or more search criteria, combine them by Boolean operators (AND, OR, NOT) and provide partial or exact match regular expressions for each of the criterion name-value pairs. The domain names matching the search criteria and their WHOIS information will quickly be returned to the user.

In order to reduce abuse for this feature, only authorized users will have access to the Whois search features after providing a username and password.

Applicant will provide third party access to the bulk zone file in accordance with Specification 4, Section 2 of the Registry Agreement. Credentialing and dissemination of the zone files will be facilitated through the Central Zone Data Access Provider, which will make access to the zone files in bulk via FTP to any person or organization that signs and abides by a Zone File Access (ZFA) Agreement with the registry. Contracted gTLD registries will provide this access daily and at no charge.

Applicant will also provide ICANN and any emergency operators with up-to-date Registration Data on a weekly basis (the day to be designated by ICANN). Data will include data committed as of 00:00:00 UTC on the day previous to the one designated for retrieval by ICANN. The file(s) will be made available for download by SFTP, unless ICANN requests other means in the future. Applicant's Legal Team will regularly monitor the registry service provider to ensure that they are providing the services as described above. This will entail random monthly testing of the WHOIS port 43 and Web-based services to ensure that they meet the ICANN Specifications and RFCs as outlined above, if not, to follow up with the registry services provider to ensure that they do. As the relevant WHOIS will only contain Applicant's information, Applicant's WHOIS services will necessarily be in compliance with any applicable privacy laws or

Question 28

Abuse Prevention and Mitigation

General Statement of Policy

Abuse within the registry will not be tolerated. DOT Registry will implement very strict policies and procedures to minimize abusive registrations and other activities that have a negative impact on Internet users. DOT Registry's homepages will provide clear contact information for its Abuse Team, and in accordance with ICANN policy DOT Registry shall host NIC.LTD, providing access to .LTD's Whois services, the Abuse Policy, and contact information for the Abuse Team.

GAC Advice Response Form for Applicants

Anti-Abuse Policy

DOT Registry will implement in its internal policies and its Registry-Registrar Agreements (RRAs) that all registered domain names in the TLD will be subject to a Domain Name Anti-Abuse Policy (“Abuse Policy”).

The Abuse Policy will provide DOT Registry with broad power to suspend, cancel, or transfer domain names that violate the Abuse Policy. DOT Registry will publish the Abuse Policy on its home website at NIC.LTD and clearly provide DOT Registry’s Point of Contact (“Abuse Contact”) and its contact information. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of abuse complaints, and a telephone number and mailing address for the primary contact. DOT Registry will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made.

In addition, with respect to inquiries from ICANN-Accredited registrars, the Abuse Contact shall handle requests related to abusive domain name practices.

Inquiries addressed to the Abuse Contact will be routed to DOT Registry’s Legal Team who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy as described in more detail below. DOT Registry will catalog all abuse communications in its CRM software using a ticketing system that maintains records of all abuse complaints indefinitely. Moreover, DOT Registry shall only provide access to these records to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

The Abuse Policy will state, at a minimum, that DOT Registry reserves the right to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary to ; (1) to protect the integrity and stability of the registry; (2) to comply with applicable laws, government rules or requirements, or court orders; (3) to avoid any liability, civil or criminal, on the part of DOT Registry, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) to correct mistakes made by the DOT Registry, registry services provider, or any registrar in connection with a domain name registration; (5) during resolution of any dispute regarding the domain; and (6) if a Registrant’s pre-authorization or payment fails; or (7) to prevent the bad faith use of a domain name that is identical to a registered trademark and being used to confuse users.

The Abuse Policy will define the abusive use of domain names to include, but not be limited to, the following activities:

- Illegal or fraudulent actions: use of the DOT Registry’s or Registrar’s services to violate the laws or regulations of any country, state, or infringe upon the laws of any other jurisdiction, or in a manner that adversely affects the legal rights of any other person;
- Spam: use of electronic messaging systems from email addresses from domains in the TLD to send unsolicited bulk messages. The term applies to e-mail spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of Web sites and Internet forums;

GAC Advice Response Form for Applicants

- Trademark and Copyright Infringement: DOT Registry will take great care to ensure that trademark and copyright infringement does not occur within the .LTD TLD. DOT Registry will employ notice and takedown procedures based on the provisions of the Digital Millennium Copyright Act (DMCA) ;
- Phishing: use of counterfeit Web pages within the TLD that are designed to trick recipients into divulging sensitive data such as usernames, passwords, or financial data;
- Pharming: redirecting of unknowing users to fraudulent Web sites or services, typically through DNS hijacking or poisoning;
- Willful distribution of malware: dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and trojan horses.
- Fast flux hosting: use of fast-flux techniques to disguise the location of Web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities. Fast-flux techniques use DNS to frequently change the location on the Internet to which the domain name of an Internet host or name server resolves. Fast flux hosting may be used only with prior permission of DOT Registry;
- Botnet command and control: services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct denial-of-service attacks (DDoS attacks);
- Distribution of pornography;
- Illegal Access to Other Computers or Networks: illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity);
- Domain Kiting/Tasting: registration of domain names to test their commercial viability before returning them during a Grace Period;
- High Volume Registrations/Surveying: registration of multiple domain names in order to warehouse them for sale or pay-per-click websites in a way that can impede DOT Registry from offering them to legitimate users or timely services to other subscribers;
- Geographic Name: registering a domain name that is identical to a Geographic Name, as defined by Specification 5 of the Registry Agreement;
- Inadequate Security: registering and using a domain name to host a website that collects third-party information but does not employ adequate security measures to protect third-party information in accordance with that geographic area's data and financial privacy laws;
- Front Running: registrars mining their own web and Whois traffic to obtain insider information with regard to high-value second-level domains, which the registrar will then register to itself or an affiliated third party for sale or to generate advertising revenue;
- Whois Accuracy: Intentionally inserting false or misleading Registrant information into the TLD's Whois database in connection with the bad faith registration and use of the domain in question;
- Whois Misuse: abusing access to the Whois database by using Registrant information for data mining purposes or other malicious purposes;
- Fake Renewal Notices; misusing Whois Registrant information to send bogus renewal notices to Registrants on file with the aim of causing the Registrant to spend unnecessary money or steal or redirect the domain at issue.

GAC Advice Response Form for Applicants

Domain Anti-Abuse Procedure

DOT Registry will provide a domain name anti-abuse procedure modeled after the DMCA's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LTD the Abuse Policy and the contact information for the Abuse Contact. Inquiries addressed to the Point of Contact will be addressed to and received by DOT Registry's Legal Time who will review and if applicable remedy any Complaint regarding an alleged violation of the Abuse Policy. DOT Registry will catalog all abuse communications and provide them to third parties only under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any correspondence ("Complaint") from a complaining party ("Complainant") to the Abuse Contact will be ticketed in DOT Registry's CRM software and relayed to DOT Registry's Abuse Team. A member of DOT Registry's Abuse Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email and that DOT Registry will notify the Complainant of the results of the Complaint within ten (10) days of receiving the Complaint.

DOT Registry's Abuse Team will review the Complaint and give it a "quick look" to see if the Complaint reasonably falls within an abusive use as defined by the Abuse Policy. If not, the Contact will write an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated abusive uses as defined by the Abuse Policy and that DOT Registry considers the matter closed.

If the quick look does not resolve the matter, DOT Registry's Abuse Team will give the Complaint a full review. Any Registrant that has been determined to be in violation of DOT Registry policies shall be notified of the violation of such policy and their options to cure the violation. Such notification shall state:

- 1) the nature of the violation;
- 2) the proposed remedy to the violation;
- 3) the time frame to cure the violation; and
- 4) the Registry's options to take subsequent action if the Registrant does not cure the violation.

If an abusive use is determined DOT Registry's Abuse Team will alert it's Registry services team to immediately cancel the resolution of the domain name. DOT Registry's Abuse Team will immediately notify the Registrant of the suspension of the domain name, the nature of the complaint, and provide the Registrant with the option to respond within ten (10) days or the domain will be canceled.

If the Registrant responds within ten (10) business days, it's response will be reviewed by the DOT Registry's Abuse Team for further review. If DOT Registry's Abuse Team is satisfied by the Registrant's response that the use is not abusive, DOT Registry's Abuse Team will submit a request by the registry services provider to reactivate the domain name. DOT Registry's Abuse Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the Registrant does not respond within ten (10) business days, DOT Registry will notify the registry services team to cancel the abusive domain name.

GAC Advice Response Form for Applicants

This Anti-Abuse Procedure will not prejudice either party's election to pursue another dispute mechanism, such as URS or UDRP.

With the resources of DOT Registry's registry services personnel, DOT Registry can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one (1) business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, questions, or comments concerning the request, and an outline of the next steps to be taken by Application for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by DOT Registry and involves the type of activity set forth in the Abuse Policy, the sponsoring registrar is then given forty-eight (48) hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar has not taken the requested action after the 48-hour period (i.e., is unresponsive to the request or refuses to take action), DOT Registry will place the domain on "serverHold".

Maintenance of Registration Criteria

If a Registrant previously awarded the ".LTD" domain ceases to be registered with a Secretary of State or legally applicable jurisdiction, such Registrant will be required to forfeit the assigned ".LTD" domain at their designated renewal date.

If DOT Registry discovers that a Registrant wrongfully applied for and was awarded a ".LTD" domain, then such ".LTD" will be immediately forfeited to DOT Registry.

If a Registrant previously awarded a ".LTD" domain is dissolved and/or forfeited for any reason, then such ".LTD" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".LTD" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".LTD" will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

A Registrant's "Active" Status will be verified annually. Any Registrant not considered "Active" by the definition listed above in question 18 will be given a probationary warning, allowing time for the Registrant to restore itself to "Active" Status. If the Registrant is unable to restore itself to "Active" status within the defined probationary period, their previously assigned ".LTD" will be forfeited. In addition, DOT Registry's definition of "Active" may change in accordance with the policies of the Secretaries of State.

Orphan Glue Removal

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often supports correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in the DNS. Therefore, when DOT Registry has written evidence of actual abuse of orphaned glue, DOT Registry will take action to remove those records from the zone to mitigate such malicious conduct.

DOT Registry's registry service operator will run a daily audit of entries in its DNS systems and compare those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either DOT Registry or its registry services operator becomes aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

Whols Accuracy

DOT Registry will provide Whois accessibility in a reliable, consistent, and predictable fashion in order to promote Whois accuracy. The Registry will adhere to port 43 Whois Service Level Agreements (SLAs), which require that port 43 WHOIS service be highly accessible and fast.

DOT Registry will offer thick Whois services, in which all authoritative Whois data—including contact data—is maintained at the registry. DOT Registry will maintain timely, unrestricted, and public access to accurate and complete Whois information, including all data objects as specified in Specification 4. Moreover, prior to the release of any domain names, DOT Registry's registrar will provide DOT Registry with an authorization code to verify eligible Registrants provide accurate Registrant contact information.

In order to further promote Whois accuracy, DOT Registry will offer a mechanism whereby third parties can submit complaints directly to the DOT Registry (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete Whois data. Such information shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to cancel or suspend the applicable domain name(s) should DOT Registry determine that the domains are being used in a manner contrary to DOT Registry's abuse policy.

DOT Registry shall also require authentication and verification of all Registrant data. DOT Registry shall verify the certificates of incorporation, whether a corporation is in active status, contact information, e-mail address, and, to the best of its abilities, determine whether address

information supplied is accurate. Second-level domains in the TLD shall not be operational unless two (2) out of three (3) of the above authentication methods have been satisfied.

With regard to registrars, DOT Registry shall provide financial incentives for pre-authentication of Registrant data prior to such data being passed to the registry. DOT Registry will provide for lower renewal and bulk registration fees in its RRAs for registrations which have been pre-authenticated and which DOT Registry can rely on as accurate data to be entered into its Whois database. Also in its RRAs, DOT Registry will also provide for higher fees and penalties for Registrant data which is obscured by proxies.

DOT Registry will also maintain historical databases of Registrants and associated information which have provided inaccurate Whois information. DOT Registry will endeavor to use this database to uncover patterns of suspicious registrations which DOT Registry shall then flag for further authentication or for review of the Registrant's use of the domain in question to ensure Registrant's use is consonant with DOT Registry's abuse policy.

In addition, DOT Registry's Abuse Team shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of domain names within the applied-for TLD to test the accuracy of the Whois information. Although this will not include verifying the actual information in the WHOIS record, DOT Registry will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the registrar, who shall be required to address those complaints with their Registrants. Thirty days after forwarding the complaint to the registrar, the DOT Registry will examine the current Whois data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, DOT Registry reserves the right to suspend the applicable domain name(s) should DOT Registry determine that the Registrant is using the domain in question in a manner contrary to DOT Registry's abuse policy. DOT Registry shall also reserve the right to report such recalcitrant registrar activities directly to ICANN.

Abuse Prevention and Mitigation – Domain Name Access

All domain name Registrants will have adequate controls to ensure proper access to domain functions.

In addition to the above, all domain name Registrants in the applied-for TLD will be required to name at least two (2) unique points of contact who are authorized to request and/or approve update, transfer, and deletion requests. The points of contact must establish strong passwords with the registrar that must be authenticated before a point of contact will be allowed to process updates, transfer, and deletion requests. Once a process update, transfer, or deletion request is entered, the points of contact will automatically be notified when a domain has been updated, transferred, or deleted through an automated system run by DOT Registry's registrar. Authentication of modified Registrant information shall be accomplished 48 Hours.

Question 29

Rights Protection Mechanisms

DOT Registry is committed to implementing strong and integrated Rights Protection Mechanisms (RPM). Use of domain names that infringe upon the legal rights of others in the TLD will not be tolerated. The nature of such uses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. DOT Registry will protect the legal rights of others by implementing RPMs and anti-abuse policies backed by robust responsiveness to complaints and requirements of DOT Registry's registrars.

Trademark Clearinghouse

Each new gTLD Registry will be required to implement support for, and interaction with, the Trademark Clearinghouse ("Clearinghouse"). The Clearinghouse is intended to serve as a central repository for information to be authenticated, stored, and disseminated pertaining to the rights of trademark holders. The data maintained in the Clearinghouse will support and facilitate other RPMs, including the mandatory Sunrise Period and Trademark Claims service.

Utilizing the Clearinghouse, all operators of new gTLDs must offer: (i) a Sunrise registration service for at least 30 days during the pre-launch phase giving eligible trademark owners an early opportunity to register second-level domains in new gTLDs; and (ii) a Trademark Claims Service for at least the first 60 days that second-level registrations are open. The Trademark Claims Service is intended to provide clear notice to a potential registrant of the rights of a trademark owner whose trademark is registered in the Clearinghouse.

Sunrise A Period

DOT Registry will offer segmented Sunrise Periods. The initial Sunrise Period will last [minimum 30 days] for owners of trademarks listed in the Clearinghouse to register domain names that consist of an identical match of their listed trademarks. All domain names registered during the Sunrise Period will be subject to DOT Registry's domain name registration policy, namely, that all registrants be validly registered corporations and all applied-for domains will only be awarded the ".LLC" domain that matches or includes a substantial part of the Registrant's legal name. DOT Registry will assign its Rights Protection Team; which is lead by our Director of Legal and Policy and further supported by two dedicated employees to receive and authenticate all Sunrise Registrations.

DOT Registry's registrar will ensure that all Sunrise Registrants meet sunrise eligibility requirements (SERs), which will be verified by Clearinghouse data. The proposed SERs include: (i) ownership of a mark that is (a) nationally or regionally registered and for which proof of use, such as a declaration and a single specimen of current use – was submitted to, and validated by, the Trademark Clearinghouse; or (b) that have been court-validated; or (c) that are specifically protected by a statute or treaty currently in effect and that was in effect on or before 26 June 2008, (ii) optional registry elected requirements concerning international classes of goods or services covered by registration; (iii) representation that all provided information is true and correct; and (iv) provision of data sufficient to document rights in the trademark.

Upon receipt of the Sunrise application, DOT Registry will issue a unique tracking number to the Registrar, which will correspond to that particular application. All applications will receive tracking numbers regardless of whether they are complete. Applications received during the

GAC Advice Response Form for Applicants

Sunrise period will be accepted on a first-come, first-served basis and must be active corporations in good standing before they may be awarded the requested domain, or able to proceed to auction. Upon submission of all of the required information and documentation, registrar will forward the information to DOT Registry's [RPM Team] for authentication. DOT Registry's [RPM Team] will review the information and documentation and verify the trademark information, and notify the potential registrant of any deficiencies. If a registrant does not cure any trademark-related deficiencies and/or respond by the means listed within one (1) week, DOT Registry will notify its registrar and the domain name will be released for registration. DOT Registry will incorporate a Sunrise Dispute Resolution Policy (SDRP). The SDRP will allow challenges to Sunrise Registrations by third parties for a ten-day period after acceptance of the registration based on the following four grounds: (i) at time the challenged domain name was registered, the registrant did not hold a trademark registration of national effect (or regional effect) or the trademark had not been court-validated or protected by statute or treaty; (ii) the domain name is not identical to the mark on which the registrant based its Sunrise registration; (iii) the trademark registration on which the registrant based its Sunrise registration is not of national or regional effect or the trademark had not been court-validated or protected by statute or treaty; or (iv) the trademark registration on which the domain name registrant based its Sunrise registration did not issue on or before the effective date of the Registry Agreement and was not applied for on or before ICANN announced the applications received.

After receiving a Sunrise Complaint, DOT Registry's [RPM Team] will review the Complaint to see if the Complaint reasonably asserts a legitimate challenge as defined by the SDRP. If not, DOT Registry's [RPM Team] will send an email to the Complainant within thirty-six (36) hours of sending the confirmation email that the subject of the complaint clearly does not fall within one of the delineated grounds as defined by the SDRP and that DOT Registry considers the matter closed.

If the domain name is not found to have adequately met the SERs, DOT Registry's [RPM Team] will alert the registrar and registry services provider to immediately suspend the resolution of the domain name. Thereafter, DOT Registry's [RPM Team] will immediately notify the Sunrise Registrant of the suspension of the domain name, the nature of the complaint, and provide the registrant with the option to respond within ten (10) days to cure the SER deficiencies or the domain name will be canceled.

If the registrant responds within ten (10) business days, its response will be reviewed by DOT Registry's [RPM Team] to determine if the SERs are met. If DOT Registry's [RPM Team] is satisfied by the registrant's response, DOT Registry's [RPM Team] will submit a request to the registrar and the registry services provider to unsuspend the domain name. DOT Registry's [RPM Team] will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial.

Names secured as described through the Sunrise AT/AD processes will result in the registration of resolving domain names at the registry. Names reserved through the Sunrise B process will not result in resolving domain name at DOT Registry. Rather, these names will be reserved and blocked from live use. The applied for string will resolve to an informational page informing visitors that the name is unavailable for registration and reserved from use.

GAC Advice Response Form for Applicants

Applications that fit the following criteria will be considered during the Sunrise A period:
Applicant owns and operates an existing domain name in another gTLD or ccTLD, in connection with eligible commerce and satisfies the registration requirements described in Section 1.

Sunrise B

Applications that fit the following criteria will be considered during the Sunrise B period:

- a) Applicant holds valid trademark registrations or owns rights to a particular name and wishes to block the use of such name.
- b) The Applicant must seek to block a name that corresponds to the entire text of its trademark or the complete textual component of a graphical or compound trademark. Certain variances are permitted for trademarks containing spaces or special characters that are not available for domain names.

Any entity, applying for blocks under Sunrise B as a non-member of the sponsored community cannot apply for names in the TLD.

Founder's Program

Applications for the Founder's Program will be accepted after the close of the Sunrise Periods. Potential registrants should understand that certain expectations, as described herein will accompany the issuance of a domain name under the Founder's Program and all registrations resulting from this program will be required to follow the below listed guidelines, which will be further described in their Program Agreement:

- a) Registrants awarded a domain through the Founder's Program must use their best efforts to launch a ".LLC" website within 30 days of signing the Program Agreement.
- b) In addition, each registrant will be required to issue a press release announcing the launch of their ".LLC" Founder Website, concurrent with the launch of their .LTD Founder Website, said press release must be approved by DOT Registry;
- c) Founder's websites should be kept good working order, with unique, meaningful content, user-friendly interfaces, and broad user appeal, for the duration of the License Term,
- d) Founders are expected to proactively market and promote ".LLC" gTLD in a manner that is likely to produce widespread awareness of the unique advantages gained through the ".LLC" string.
- e) Founders are expected to participate in reasonable joint marketing initiatives with DOT Registry or its Agents, these would be discussed and mutually agreed upon, given the unique circumstances of each marketing venture.
- f) Founders will allow DOT Registry to use in good faith Founder's name, likeness, trademarks, logos, and Application contents (other than Confidential Information,) as well as other Founder information and content as may be mutually agreed, in DOT Registry's marketing, promotional and communications materials.

DOT Registry will randomly verify compliance of the above listed expectations and have the right to revoke any Founder's site, should they be deemed non-compliant.

Landrush

Landrush is a limited time opportunity for companies that want to secure a high value ".LLC" name for a small fee (above the basic registration cost). The landrush period will last 30 days. Applications will be accepted and evaluated to determine if they meet the requirements for registration. At the end of the Landrush period domain names with only one application will be awarded directly to the DOT Registry. Domain names with two or more applications will proceed to a closed mini auction, between the respective DOT Registrys, where the highest bidder wins.

General Availability Period

DOT Registry must meet registration requirements.

GAC Advice Response Form for Applicants

Names will be awarded on a first-come, first serve basis which is determined as of the time of the initial request, not when authentication occurs.

Domain Name Contentions

Name contentions will arise when both a Sunrise A and Sunrise B application are submitted for the same name, the following actions will be taken to resolve the contention.

- a) Both DOT Registries will be notified of the contention and the Sunrise A DOT Registry will be given first right to either register their requested domain or withdraw their application. Since “.LLC” is a sponsored community domain for registered Corporations, a domain applied for under Sunrise A will, all else being equal, receive priority over the identical domain applied for under Sunrise B. Sunrise A names get priority over Sunrise B names.
- b) If the Sunrise A DOT Registry chooses to register their name regardless of the contention, then the Sunrise B DOT Registry may choose to pursue further action independently of DOT Registry to contest the name.
- c) If two Sunrise A DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet both seek to be awarded the use of DELTA.LTD) then DOT Registry will notify both DOT Registries of the contention and proceed to an auction process as described in Section 9.
- d) If a Sunrise A DOT Registry and a Landrush DOT Registry apply for the same domain name, the Sunrise A DOT Registry, all else being equal will have priority over the Landrush DOT Registry.
- e) If two Sunrise B DOT Registries apply for the same domain name (i.e., Delta Airlines and Delta Faucet, both seek to block the use of DELTA. INC), then DOT Registry will accept both applications as valid and block the use of the indicated domain.

Appeal of Rejected Sunrise Applications

An DOT Registry can file a request for reconsideration within 10 days of the notification of DOT Registry’s rejection. Reconsideration can be requested by completing a reconsideration form and filing a reconsideration fee with DOT Registry. Forms, fee information, and process documentation will be available on the DOT Registry website. Upon receipt of the reconsideration form and the corresponding fee, DOT Registry or its Agents will re-examine the application, and notify the Registrant of all findings or additional information needed. The Request for Reconsideration must be submitted through the Registrant’s registrar, and a reconsideration fee must be paid to DOT Registry.

Auctions

Sunrise A names found to be in contention as described above will result in Auction. DOT Registry plans to have a qualified third party conduct our auction processes, therefore the rules contained in this document are subject to change based on the selection of an auctioneer:

- a) When your auction account is created, it will be assigned a unique bidder alias in order to ensure confidential bidding. The bidder alias will not reflect any information about your account. You may change your bidder alias to a name of your choosing but once set, it cannot be changed again.
- b) All auction participants are expected to keep their account information current, throughout the auction process.
- c) Auction participants will receive up to date communication from the auctioneer as the auction progresses, bidding status changes, or issues arise.
- d) Bidding
 - i) Auctions will follow a standard process flow: scheduled (upcoming), open and closed.
 - ii) You will receive an “Auction Scheduled” notice at least ten (10) days prior to the scheduled auction start date. You will receive an “Auction Start” notice on the auction start date, which will

indicate that you may begin placing bids through the interface. Once closed, the auction is complete and if you are the winning bidder, you will proceed to the payment process.

iii) If you choose to bid for a particular domain and you are the highest bidder at the end of an auction, you are obligated to complete the transaction and pay the Auctioneer the amount of your winning bid. Carefully consider your bids prior to placing them - bids are not retractable under any circumstances.

iv) If no bids are placed on a particular domain, the Registry will register the domain on behalf of the first customer (in the respective phase) to submit an application through a registrar.

e) Extensions

i) A normal auction period is anticipated to last a minimum of 7 (seven) days. However, in the event of significant auction activity, an auction close may extend during the last twenty-four (24) hours of scheduled operation to better need the volume of the auction.

ii) Auction extensions are meant to provide a mechanism that is fair for bidders in all time zones to respond to being outbid.

iii) An auction extension will occur whenever the auction lead changes in the last twenty four (24) hours of the schedule of an auction. The close will be revised to reflect a new closing time set at twenty four (24) hours after the change in auction lead occurred. Essentially, this means that a winning maximum bid has to remain unchallenged for a period of twenty four (24) hours before the auction will close.

iv) It is important to note that extensions are not simply based on the auction value changing since this could occur as a result of proxy bidding where the same bidder retains their lead. In this case, the maximum bid has not changed, the leader has not changed and therefore no extension will occur.

f) Payment Default

In the event that you as the winning bidder decide not to honor your payment obligations (or in the event of a reversal of payment or a charge back by a credit card company or other payment provider) on any outstanding balance, the Registry has the right to cancel any/all of your winning registrations for any .LTD domain name, regardless of whether they have been paid for or not. You do not have the right to “pick and choose” the names you wish to keep or not keep. Winning an auction creates an obligation to remit payment. Failure to remit payment is a breach of your agreement.. You will lose any previously won domains and will no longer be allowed to bid on any current or future auctions sponsored by DOT Registry. Participants are encouraged therefore to consider carefully each bid submitted as any bid could be a winning bid.

Trademark Claims Service

DOT Registry will offer a Trademark Claims Service indefinitely to provide maximum protection and value to rights holders. The Trademark Claims Service will be monitored and operated by DOT Registry’s RPM Team that will receive all communications regarding the Trademark Claims Service and catalog them. DOT Registry’s registrar will review all domain name requests to determine if they are an identical match of a trademark filed with the Trademark Clearinghouse. A domain name will be considered an identical match when the domain name consists of the complete and identical textual elements of the mark, and includes domain names where (a) spaces contained within a mark that are either replaced by hyphens (and vice versa) or omitted; (b) certain special characters contained within a trademark are spelled out with appropriate words describing it (e.g., @ and &); and (c) punctuation or special characters contained within a mark that are unable to be used in a second-level domain name are either (i) omitted or (ii) replaced by spaces, hyphens or underscores. Domain names that are plural forms of a mark, or that merely contain a mark, will not qualify as an identical match.

If the registrar determines that a prospective domain name registration is identical to a mark registered in the Trademark Clearinghouse, the registrar will be required to email a “Trademark Claims Notice” (Notice) in English to the protective registrant of the domain name and copy DOT Registry’s RPM Team. The Notice will provide the prospective registrant information regarding the trademark referenced in the Trademark Claims Notice to enhance understanding of the Trademark rights being claimed by the trademark holder. The Notice will be provided in real time without cost to the prospective registrant.

After receiving the notice, the registrar will provide the prospective registrant five (5) days to reply to the Trademark Claims Service with a signed document that specifically warrants that: (i) the prospective registrant has received notification that the mark is included in the Clearinghouse; (ii) the prospective registrant has received and understood the notice; and (iii) to the best of the prospective registrant’s knowledge the registration and use of the requested domain name will not infringe on the rights that are the subject of the notice. If the warranty document satisfies these requirements, the registrar will effectuate the registration and notify DOT Registry’s RPM Team.

After the effectuation of a registration that is identical to a mark listed in the Trademark Clearinghouse, the registrar will provide clear notice to the trademark owner consisting of the domain name that has been registered and copy DOT Registry’s RPM Team. The trademark owner then has the option of filing a Complaint under the Uniform Domain Name Dispute Resolution Policy (UDRP) or the Uniform Rapid Suspension System (URS).

Uniform Rapid Suspension System (URS)

DOT Registry will specify in the Registry Agreement, all RRAs, and all Registration Agreements used in connection with the TLD that it and its registrars will abide by all decisions made by panels in accordance with the Uniform Rapid Suspension System (URS). DOT Registry’s RPM Team will receive all URS Complaints and decisions, and will notify its registrar to suspend all registrations determined by a URS panel to be infringing within a commercially reasonable time of receiving the decision. DOT Registry’s RPM Team will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Uniform Domain Name Dispute Resolution Policy (UDRP)

DOT Registry will specify in the Registry Agreement, all Registry-Registrar Agreements, and Registration Agreements used in connection with the TLD that it will promptly abide by all decisions made by panels in accordance with the Uniform Domain Name Dispute Resolution Policy (UDRP). DOT Registry’s RPM Team will receive all UDRP Complaints and decisions, and will notify its registrar to cancel or transfer all registrations determined to by a UDRP panel to be infringing within ten (10) business days of receiving the decision. DOT Registry’s [RPM Team] will catalog all abuse communications, but only provide them to third-parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Proven Registrars

GAC Advice Response Form for Applicants

In order to reduce abusive registrations and other activities that affect the legal rights of others, DOT Registry will only contract with ICANN-accredited registrars. The registrar, according to the RRA, will not be able to register any domain names, thus eliminating the possibility of front-running.

Pre-Authorization and Authentication

Registrant authentication shall occur in accordance with the registration eligibility criteria and the Anti-Abuse Policy for .LTD as set forth in Question 28.

The verification process is designed to prevent a prospective registrant from providing inaccurate or incomplete data, such that, if necessary, the registrant can be readily contacted regarding an infringing use of its site; indeed, the process (including verification of a registrant's certificate of incorporation) is designed to ensure that only qualified members of the community are permitted to register in the TLD.

DOT Registry will not permit registrants to use proxy services.

Thick Whois

DOT Registry will include a thick Whois database as required in Specification 4 of the Registry agreement. A thick Whois provides numerous advantages including a centralized location of registrant information, the ability to more easily manage and control the accuracy of data, and a consistent user experience.

Grace Period

If a Registrant previously awarded a ".LLC" domain is dissolved and/or forfeited for any reason, then such ".LLC" domain will be forfeited to DOT Registry at their designated renewal time; unless such Registrant takes all reasonable steps to become reinstated and such Registrant is reinstated within six months of being dissolved and/or forfeited.

If a Registrant previously awarded the ".LLC" domain is administratively dissolved by the Secretary of State or legally applicable jurisdiction, then such ".LLC" will be forfeited to DOT Registry at their designated renewal time, unless such Registrant is reinstated within six months of being administratively dissolved.

Takedown Procedure

DOT Registry will provide a Takedown Procedure modeled after the Digital Millennium Copyright Act's notice-and-takedown procedure.

At all times, DOT Registry will publish on its home website at NIC.LTD contact information for receiving rights protection complaints (Complaint) from rights holders, including but not limited to trademark and copyright Complaints. Complaints will be addressed to and received by DOT Registry's RPM Team who will catalogue and ticket in DOT Registry's CRM software and review as outlined herein. DOT Registry will catalog all rights protection communications and only provide

GAC Advice Response Form for Applicants

them to third parties under limited circumstances, such as in response to a subpoena or other such court order or demonstrated official need by law enforcement.

Any Complaint from a rights holder will be relayed to DOT Registry's RPM Team. A member of DOT Registry's RPM Team will then send an email to the Complainant within forty-eight (48) hours of receiving the Complaint confirming receipt of the email, and that DOT Registry will notify the Complainant of the results of the Complaint within (10) days of receiving the Complaint.

After sending the confirmation email, DOT Registry's RPM Team will review the Complaint. If DOT Registry or its registrar determines that the registration was in bad faith, DOT Registry or its registrar may cancel or suspend the resolution of the domain name. Bad faith registration includes, but is not limited to, the registration of a domain identical to a registered trademark where the registrant has proceeded with registration after receipt of a Clearinghouse notice, as described above.

If the registrant responds within ten (10) business days, its response will be reviewed by the DOT Registry's RPM Team if DOT Registry's RPM Team is satisfied by the registrant's response that the content has been taken down or is not infringing, DOT Registry's RPM Team will unsuspend the domain name. DOT Registry's RPM Team will then notify the Complainant that its complaint was ultimately denied and provide the reasons for the denial. If the registrant does not respond within ten (10) business days, DOT Registry or its registrar may cancel or suspend the resolution of the domain name.

This Takedown Procedure will not prejudice any party's election to pursue another dispute mechanism, such as URS or UDRP, as set forth in DOT Registry's response to Question 28.

Los Angeles, CA 90094-2536

Subject: Letter of Support for the Restricted Use of the Top Level
Domains, “.INC”, “.LLC”, “.CORP”, and “.LLP”

To Whom It May Concern,

This letter confirms that the Tennessee Secretary of State’s Office is charged with registering businesses in the State of Tennessee. In addition, my office monitors the position of good standing each of these businesses maintains and their overall right to conduct business transactions or commerce within the United States. The companies registered with this office are members of the larger community of registered U.S. Businesses, which can be further divided into the following designations: The Community of Registered Corporations, the Community of Registered Limited Liability Companies and the Community of Limited Liability Partnerships.

We understand that the Internet Corporation for Assigned Names and Numbers (“ICANN”) is in the process of reviewing applications that refer to the business entity designations of INC, LLC, LLP and CORP. This office has been informed that DOT Registry, LLC has submitted community applications for these strings with restrictions that are intended to protect U.S. companies that are registered with the Secretary of State. With growing national concern about fraudulent business registration, business identity theft, and online consumer protection, this office believes that these strings should only be issued under a community designation in order to protect both the members of this community and consumers at large.

Our office believes that specific restrictions and policies must be in place to protect the community of U.S. Registered Businesses and to ensure that these extensions are only representative of members of their respective communities as verified through their respective Secretary of State’s Office.

Sincerely,

A handwritten signature in blue ink, appearing to read "Tre Hargett".

OFFICE OF THE SECRETARY OF STATE

ROSS MILLER
Secretary of State

March 8, 2013

Internet Corporation of Assigned Names and Numbers
12025 Waterfront Drive, Suite 300
Los Angeles CA 90094-2536

RE: Restricted Use of Domains using .inc, .llc, .corp and .llp

TO WHOM IT MAY CONCERN;

My office is responsible for processing the organizational, amendatory and annual filings for Nevada corporations, limited liability companies, limited partnerships and other statutory business entities. These entities do business as Nevada entities not only in Nevada, but throughout the U.S. and around the world. My office is the second most popular business entity filing jurisdiction in the country, behind Delaware.

Fraudulent use of corporate entities, business identity theft and consumer protection are of growing concern to me, as is the potential of abuse by those offering online services. The free and unregulated issuance of names using these extensions is also a concern because of possible confusion or deception caused by entities that are not properly registered in my office.

It is my understanding that DOT Registry, LLC has applied to you for the use of the domain names with these extensions. I believe that restrictions and policies must be crafted not only to protect Nevada and U.S. entities, but also the consumers utilizing the associated web sites. I also understand that DOT Registry, LLC's application may include provisions protecting entities on file with my office, other Secretaries of State and state filing offices. Regardless of the applicant, such restrictions and protections must be in place.

I remain available if I can be of further assistance.

Respectfully,

A handwritten signature in blue ink that reads "Ross Miller".

Subject: Letter of support for the Restricted Use of the Top Level Domains, ".INC"
and ".LLC"

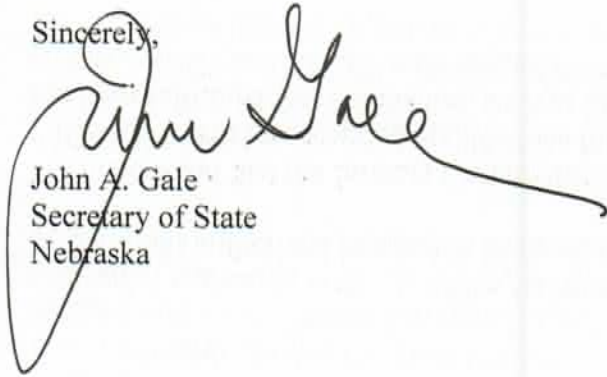

Ladies and Gentlemen:

This letter confirms that the State of Nebraska, Office of the Secretary of State, is charged with administering Nebraska's database of registered business entities. The companies registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with the Secretary of State.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a secretary of state or equivalent agency. It is important that registry companies provide access to the information provided by registered companies for jurisdictional purposes. Our office believes that such restrictions are integral to these strings and will object to the use of the strings, ".INC" and ".LLC" without any restrictions.

Sincerely,

John A. Gale

Dear Mr. Spurgeon,

I will not replicate the "form" letter on my letterhead that you requested for my signature in your e-mail message that I received today. It is not in a format or text that is comfortable for me.

However, because of my concern with the possible approval by ICANN of these extensions, I am willing to provide you with the enclosed letter. You may use it, as you deem appropriate.

By the way, NASS has not yet approved a letter, as referenced in your message. Although it was circulated through the membership of the Business Services Committee, the Executive Committee has not yet given final approval to the letter.

If Bill Clark or you have any questions or concerns about my letter, you are certainly welcomed to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Al Jaeger".

SECRETARY OF STATE

STATE OF NORTH DAKOTA
600 EAST BOULEVARD AVENUE DEPT 108
BISMARCK ND 58505-0500

March 23, 2012

Internet Corporation for Assigned Names and Numbers
1101 New York Avenue NW Suite 930
Washington DC 20005

To Whom It May Concern:

As the Secretary of State, I have the administrative oversight of various business entity registrations filed in my state.

It is my understanding that your organization (ICANN) is now accepting applications for a new expanded top level domain name program. I have learned that extensions such as .INC, .LLC, .LLP, and .CORP may be under consideration and that is of significant concern to me.

If ICANN considers approving these extensions, I respectfully request that they be approved and awarded to a company that has submitted an application that includes restrictions they will abide by, which would provide all of the possible protection for legitimate businesses and consumers from confusion or fraud.

All of these mentioned extensions are recognized under North Dakota state law as a means of identifying various types of business entities that are legally filed with my office. Therefore, it is important to ensure that the website domain name being considered for a business entity is only extended to a business entity that has a corresponding legal registration identified with that domain name. These business entities, with their registration, have lawfully earned the right to use these entity identifiers. That right should not be infringed about by any company or individual that has not obtained the legal use of them through the registration process in one of the states.

Therefore, along with my fellow members of the National Association of Secretaries of State (NASS), I am of the opinion that these extension identifiers should only be extended to entities in their respective states that are legally and appropriately registered with the Secretary of State, or the equivalent state agency.

During the past several months, the NASS Business Services Committee (of which I am a member) has been considering the proposed ICANN program and has been reviewing the potential impact these new extensions would have on existing businesses and new businesses registering with the various states.

As one member of the committee, I believe it is fundamental that NASS be consulted by companies such as DOT Registry or any other applicants regarding policy related to the registering and identifying of businesses as this expanded program is considered by ICANN. And, if ICANN approves these extensions, the successful recipient will agree to extend the new extensions only to a "community" of businesses appropriately and legally registered in one of the various states.

Without having appropriate restrictions in place, I would strongly oppose approving these extensions and awarding them to any company.

Sincerely,

A handwritten signature in cursive script, appearing to read "Al Jaeger".

ELAINE F. MARSHALL
SECRETARY OF STATE

February 13, 2012

Dot Registry
208 W 19th St
Kansas City, MO 64108

Dear Ladies and Gentlemen:

This letter advises that the Department of the Secretary of State of North Carolina is charged with overseeing the business formation process for the formation of corporations, limited liability companies (LLCs), non-profit companies, professional associations, and several other types of business structures, as well as the maintenance of North Carolina's database relating to the aforementioned business entities. The businesses registered with this office are members of the larger community of corporations authorized to conduct business in the United States.

We understand that the Internet Corporation for Assigned Names and Numbers (ICANN) will be accepting applications for new web extensions this year. This office has been informed that companies, such as DOT Registry, LLC, will be applying for the strings, ".INC" and ".LLC" with restrictions that are intended to protect U.S. companies and consumers that are registered with their state's administrator.

In the event ICANN decides to issue these strings and in order to further the public policy reasons for which entities file at the state level, we believe that such strings should only be issued to companies that are registered with a Secretary of State or equivalent agency. I believe that entities not appropriately registered and maintained in any state should be prohibited from strings that would misrepresent their existence. As most Secretaries of State are not equipped to verify legitimate entity existence, even though we maintain that information, the verification process should be a requirement, albeit not ours.

Sincerely,

A handwritten signature in cursive script that reads "Elaine F. Marshall".

Attn: gTLD Program
4676 Admiralty Way
Suite 330
Marina del Rey, CA 90292-6601

To Whom It May Concern:

As Delaware's Secretary of State, I administer the State's company registry and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities, such as corporations and limited liability companies, (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 63% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies around the world.

I understand that the Internet Corporation for Assigned Names and Numbers ("ICANN") will be accepting applications for new generic Top Level Domain (gTLD) name extensions this year. I have been informed that at least one firm – DOT Registry LLC – and possibly several other firms, plan to apply for the strings ".INC", ".CORP", ".LLC" and other potentially related extensions that state registries define as "company endings".

I join a chorus of federal and state officials who urge ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse. As such, it is absolutely critical that if ICANN determines to grant such name extensions, that it does so in a restricted manner that is intended to protect consumers and the community of interest that exists among validly registered U.S. companies and my fellow State secretaries of state and other State company registrars that are responsible for administering the nation's legal entity registration system.

ICANN – gTLD program
March 20, 2012

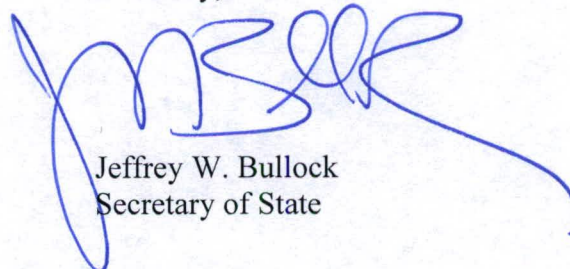

I therefore request that ICANN reject any request for the unrestricted use of “.INC”, “.LLC”, “.LLP”, “.CORP”, “.BANK”, “.TRUST” or similar commonly used company endings in the United States. The State of Delaware will object to the granting of such strings without restrictions.

I further request that, at a minimum, any approval for company ending strings be restricted in such a way that reasonably assures that the legal entity is, in fact, an active and validly registered legal entity in the United States, as DOT Registry LLC has proposed within its application. Specifically, any firm awarded the responsibility of administering such strings should be required to confirm whether the legal entity is validly formed according to criteria and documentation established by the states, and be required to check annually at renewal that the entity remains validly registered and actively in good standing according to criteria and documentation established by the states. The restrictions should further require that the homepage of such websites provide a mechanism that provides for the disclosure of the jurisdiction in which the entity is legally domiciled or include a geographic tag within the website name.

In order to reduce the risk of fraudulent activity, Delaware law places additional restrictions on the use of words such as “bank” and “trust” that are commonly associated with financial institutions. I therefore urge ICANN to seriously consider comment letters that have been submitted by the American Bankers Association and others urging ICANN to reject or place very significant restrictions on applications for the use of name extensions such as “.BANK” and “.TRUST”.

If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration of this request.

Sincerely,

Jeffrey W. Bullock
Secretary of State

Dear Ms. Dryden and Ms. Radell:

As Delaware's Secretary of State, I administer the State's company registry, and am responsible for protecting the integrity of Delaware's legal entity registration system. Nearly one million legal entities such as corporations and limited liability companies (LLC) are organized in the United States under the laws of the State of Delaware.

The State of Delaware is the legal domicile of 64% of Fortune 500 companies, 55% of the firms listed on the two major U.S. stock exchanges, and 80% of new initial public offerings in the United States. Delaware is also the legal home to many of America's largest private-held and non-profit companies and hundreds of thousands of subsidiaries and affiliates of major companies in North America and around the world.

In March of 2012, I imparted my concerns about ICANN's application review process for generic Top Level Domain (gTLDs) name extensions defined by state and provincial registries as "company endings". Such company endings include, but are not limited to, ".INC", ".CORP", ".LLP", ".LTD", ".GMBH", ".COMPANY" and "LLC". At that time, I joined a chorus of federal and state officials in the United States who had urged ICANN to proceed cautiously and deliberately in any approvals of new gTLDs. Delaware's view is that the granting of such name extensions creates a number of public policy issues and concerns – not the least of which is increasing the potential for fraud and abuse.

Since expressing my initial concerns, I have followed the application and early warning process closely. More recently, I've learned of ICANN's new "Public Interest Commitments" (PIC) process and its associated "Public Interest Commitment Dispute Resolution Process" (PICDRS). Having the benefit of ICANN's response to my initial concerns and having reviewed the applications that have been submitted, I have no confidence that ICANN is interested in or capable of putting a system of clear and transparent enforcement mechanisms in place to ensure that "company endings" are not used for fraudulent or misleading purposes.

The responses I have received from ICANN and others have failed to acknowledge in any way the complex public policy questions raised by allowing gTLDs that use company endings. Instead, the responses have focused entirely on the process for filing objections to applications. The singular focus on an approval process rather than recognizing the serious policy implications associated with its granting of certain gTLDs calls into question whether ICANN is capable of evaluating, instituting and enforcing meaningful measures to protect consumers and legitimate legal entities from fraud and abuse.

Over 30 applications were submitted for various company endings, and while some of the applications include a proposed verification process, many do not. Only one applicant sought any input whatsoever from the affected community in my state and nationally. So it is no surprise that applicants that did propose a verification system failed to propose systems with enforceable mechanisms for safeguarding consumers, the public at large, state regulators, and the Internet itself from the types of fraud and abuse that are likely to occur in the absence of specific safeguards.

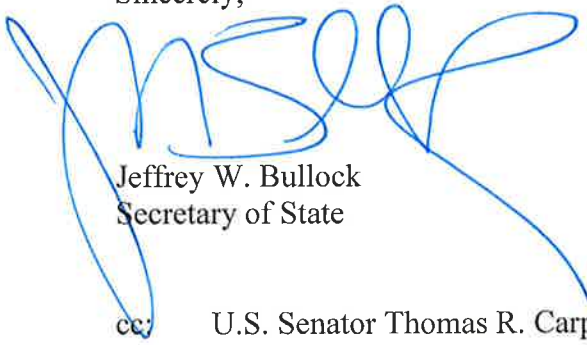

At this stage of the gTLDs process, I continue to believe that the public is best served if these company endings are not made available for use. I do not see an overriding public policy purpose or strong business case for ICANN to make them available – especially when hundreds of additional gTLDs are soon to become available.

It is also clear to me that any enforcement mechanism administered through ICANN is unlikely to provide the appropriate level of ongoing enforcement over the use of these sensitive gTLDs. The new PICDRS process, while no doubt well-intentioned, requires constant vigilance by the impacted community of company registrars. Not awarding these gTLDs is the preferred alternative. However, if such gTLDs are to be awarded and if there is going to be an effective and real-time enforcement mechanism, it must originate from the community with the greatest interest – namely, the company registrar

community represented in North America by organizations such as the International Association of Commercial Administrators (IACA) and the National Association of Secretaries of States (NASS) or in the case of non-U.S. endings such as .GMBH and .LTD with similar registrar communities elsewhere.

I am pleased to share these concerns and recommendations with you and I would welcome the opportunity to discuss them in greater detail. I am hoping that the GAC may be the appropriate vehicle for blocking the award of such gTLDs and assuring that adequate protections for consumers and businesses are put in place. If you have any questions, please contact me or Richard J. Geisenberger, Chief Deputy Secretary of State, at 302-739-4111. Thank you for your consideration.

Sincerely,

Jeffrey W. Bullock
Secretary of State

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	AC Webconnecting Holding B.V.
Application ID	1-882-71415
Applied for TLD (string)	cam

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendations made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.). Should the ICANN board decide to request that these sections of the application are to be implemented into the ICANN new gTLD agreement, we are willing to comply with such a request.

While we do not believe this will add any additional public benefit for the users of this TLD, we accept the new requirement to only accredit registrars signing the new RAA in our TLD.

Thank you very much for this opportunity to highlight our view on these issues.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotGreen Community Inc.
Application ID	1-884-75541
Applied for TLD (string)	.GREEN

Response:

The GAC Advice to ICANN regarding Community Support for new gTLDs (New gTLDs section 1E of Beijing GAC Communiqué) is very important, straightforward, comprehensive, and exactly within the expectation of the role of the GAC in the new gTLD program and in the ICANN processes. The GAC Advice regarding Community Support as it relates to the .GREEN TLD must be accepted in full by ICANN. The following explains how this GAC Advice impacts the .GREEN TLD, an important global TLD designed to serve the global Public Interest.

Section 1E - Community Support for Application:

The GAC advised ICANN “that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.”

FACT: For the first time in the history of the bottoms up multi-stakeholder process at ICANN, the GREEN Internet user voice has joined the discussion at ICANN through representation by DotGreen Community Inc. (“DGC”). In addition, members of the global green community have participated in the online ICANN Public Comment Forum, thus learning more about ICANN and its processes. Finally, many international delegates have interacted with the local Green Community leaders during DGC sponsored People and Planet Events alongside ICANN meetings in four of five ICANN regions so far.

Keeping the voice of Green stakeholders of the Internet active at ICANN meetings, and serving the Public Interest is at risk because there are three other non-community supported applicants for .GREEN. The selection of which applicant will operate the .GREEN TLD will cause tremendous impact to this community as it is important that the voice of Green Stakeholders

GAC Advice Response Form for Applicants

around the world continue to be heard within ICANN and that can only be accomplished by ensuring that the Green Community's representative, DGC, operates the .GREEN TLD. The other three applications in the .GREEN contention set do not reflect or represent the Green Community or the Green Community's interests in any way. Their interests as existing registries is already a well represented (also needed) perspective among the stakeholders at ICANN policy discussions. The Green Community will be severely negatively impacted if an entity not intimate with "GREEN" and not supported by this community stands to take over this valuable identity and internationalized term which many in the Green Movement from all regions of the world both on and offline have already aligned their values with. Industries and people are shifting to GREEN and this is reflected in other governing bodies, and should be at ICANN too.

The Global Public, and for the first time, the Green Community, contributed its voice through the multi-stakeholder process of bottoms-up consensus driven policy via the ICANN New gTLD Public Comments component of the process and it is imperative that the ICANN Board listens and reacts appropriately.

DotGreen has 100% of the positive and supportive comments documented in ICANN's Public Forum, and zero objectionable comments about DotGreen. This is not true of the three competitors who have all received multiple negative new gTLD commentary from the Public with regards to their application(s) and no positive or supportive comments. The reason for this is DGC has the support of the Green Community - plain and simple.

In addition, the three competitors all received a GAC Early Warning in November 2012 prior to this GAC advice. DotGreen Community did not receive an Early Warning.

EarthShare a significant part of the green community, is a Federation of more than 500 of the world's largest and International Environmental Organizations, all of whom have hundreds of corporate partners and collectively represent millions of individual members acting together for GREEN. In 2008, EarthShare wrote a letter directly to ICANN to inform the Board of their support for the new .GREEN TLD initiative and for DGC to run it. Years later, in 2012, another letter of support, and affirmation from EarthShare, was posted on the ICANN website in the Public Comments Forum. It states that as a member of the GREEN Community, it requests that ICANN delegate the .GREEN TLD to DGC and explains why this is so important.

The bottoms-up multi-stakeholder model requires public comment to be true to its process. The voice of the public has been collective and clear. DotGreen Community is the clear representative of the Green Community, and the only applicant who is qualified to run the .GREEN TLD and all that entails to serve this community appropriately. After the almost 6 years of open and transparent global public outreach about .GREEN, about the Green Community, about ICANN, and about new gTLDs in general, by DGC, the public has never voiced an objection or negative comment specifically about DGC or its .GREEN initiative. The Green Community without doubt continues to support and requests that ICANN delegate the .GREEN TLD to DGC.

ICANN gains legitimacy on the global stage through fulfilling its own mandates of the new gTLD Program:

- Public Comment Process
- GAC Advice from the International Governmental Stakeholders

GAC Advice Response Form for Applicants

- Broad global community support for a community string
- Public Interest (.GREEN is clearly a global Public Interest TLD)
- The Applicant Guidebook

All of these mandates are very important to the legitimacy of the new gTLD process, the Affirmation of Commitments, the core values of ICANN, and the Public Interest. ICANN must act first for the benefits of Internet users, and all decisions and outcomes must be in the Public Interest.

The following excerpts from The Affirmation of Commitments precisely confirm the above statements.

“3. This document affirms key commitments by DOC and ICANN, including commitments to: (a) ensure that decisions made related to the global technical coordination of the DNS are made in the public interest and are accountable and transparent;...” Affirmation of Commitments.

“4. DOC affirms its commitment to a multi-stakeholder, private sector led, bottoms-up policy development model for DNS technical coordination that acts for the benefit of global Internet users. A private coordinating process, the outcomes of which reflect the public interest, is best able to flexibly meet the changing needs of the Internet and of Internet users. ICANN and DOC recognize that there is a group of participants that engage in ICANN's processes to a greater extent than Internet users generally. To ensure that its decisions are in the public interest, and not just the interests of a particular set of stakeholders, ICANN commits to perform and publish analyses of the positive and negative effects of its decisions on the public, including any financial impact on the public, and the positive or negative impact (if any) on the systemic security, stability and resiliency of the DNS.” – Affirmation of Commitments

“6. DOC also affirms the United States Government's commitment to ongoing participation in ICANN's Governmental Advisory Committee (GAC). DOC recognizes the important role of the GAC with respect to ICANN decision-making and execution of tasks and of the effective consideration by ICANN of GAC input on the public policy aspects of the technical coordination of the Internet DNS.” – The Affirmation of Commitments

Conclusion: All of the positive .GREEN public comments submitted (49) were in support of the DGC application. There were no positive comments submitted for the other applications and in fact, they received negative comments. It is very objectively clear that the Green Community has selected and contributed appropriately to the multi-stakeholder discussion on who should operate .GREEN and that is DGC. ICANN recognizes that there is a group of participants that engage in ICANN's processes to a greater extent than Internet users generally. ICANN has affirmed its commitment to ensure that its decisions are in the public interest, and not just the interests of a particular set of stakeholders. It is also clear in the Affirmation of Commitments that as ICANN must adhere to a multi-stakeholder, bottoms-up process, that includes listening to the GAC and acting on GAC Advice where it relates to Public Interest and the outcomes of ICANN's decisions must always be for the Public Interest and Internet user.

At the time of this letter, DotGreen Community, Inc. is the only applicant for the .GREEN TLD who has passed the Initial Evaluations. The other .GREEN applicants are still eligible for refunds. ICANN has achieved international legitimacy for the new gTLD process by listening to GAC

GAC Advice Response Form for Applicants

Advice, and by providing for further consultation when needed. While ICANN is not expected to take all GAC Advice, it is responsible to accept the GAC's Advice when aligned with the new gTLD program, supportive of multi-stakeholder governance, and ICANN's mandates of Consumer Trust, Choice, Competition and Innovation. The GAC Advice delivered to ICANN on Community Supported is such advice and in fact warrants removing the non-community supported .GREEN TLD applications from the new gTLD program.

In summary, the global Green Community has participated at ICANN appropriately through the multi-stakeholder process by way of DGC, letters to ICANN, the online public comments forum, and even through representative members of the GAC. It has been confirmed to ICANN that the .GREEN TLD has tremendous potential on the Internet to positively impact people and planet and should be managed by an applicant from the Green Community for the Green Community. ICANN must act and adhere to the principles of Public Interest as is written in the Affirmation of Commitments – by ensuring the interests of the global Internet users are protected. ICANN must also protect the multi-stakeholder model, the new gTLD program, its relationship with the GAC, and its own legitimacy on the international stage. This is accomplished by listening to and accepting GAC Advice as it relates to Community Support. .GREEN, critically important to the future of our people and planet, is clearly a global Public Interest TLD. DotGreen has the support of its community, clearly represents a valuable Internet stakeholder at ICANN ensuring consumer trust and choice on the Internet. DGC is the only entity in the history of ICANN who has brought the clear voice of the “Green” stakeholder to Internet governance at ICANN. As part of ICANN's Affirmation of Commitments, ICANN is directed to make decisions in the Public Interest, incorporate the global interests of Internet users into its bottoms-up policy development through the multi-stakeholder model and to listen and accept GAC Advice when its aligned with the new gTLD program, and then to take action! It is for all these reasons, that all registry's applications for .GREEN should be removed from the program to prevent detriment and harm to the processes and to ICANN, the Green Community, and the public. The .GREEN TLD should be awarded by ICANN to the community supported DGC on the basis of GAC Advice and the Public Interest.

The next section of GAC Advice DGC will address is New gTLDs Section 1B (Annex I) relating to Safeguards Advice.

.GREEN was mentioned in the non-exhaustive list. While this was a part of the official GAC Advice, the issues addressed appear to be in the categories of policy development and the Applicant Guidebook. While we feel this section does not fall into the original spirit and intent of GAC Advice, we will nonetheless address these issues below. Should ICANN decide that this GAC Advice is outside the new gTLD program, or is irrelevant to the .GREEN TLD, the reader may skip our response below.

Section 1B Safeguard Advice for New gTLDs sections 1 – 5 (Annex 1)

While we understand the GAC's concerns, we will describe below how we either are already addressing these issues or describe how they are not applicable.

GAC Advice - 1. Registry operators will include in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer

GAC Advice Response Form for Applicants

protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

DGC will adhere to all requirements in the ICANN New gTLD Guidebook and the Registry Agreement. It will also only work with Registrars who sign the 2013 Registrar Accreditation Agreement. In addition, as stated in its application, DGC will require all .GREEN registrants to confirm their understanding of the Green concept. And DGC will also take action against .GREEN domain names used in a harmful or abusive manner not consistent with the principles of Green and Sustainability.

GAC Advice - 2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

DGC will adhere to all requirements in the ICANN New gTLD Guidebook and the Registry Agreement. In addition, it will only work with Registrars who sign the 2013 Registrar Accreditation Agreement.

GAC Advice - 3. Registry operators will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

DGC will adhere to all requirements in the ICANN New gTLD Guidebook and the Registry Agreement. In addition, it will only work with Registrars who sign the 2013 Registrar Accreditation Agreement.

GAC Advice - 4. Establish a working relationship with the relevant regulatory, or industry self-regulatory, bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

DGC has been and always will be very closely involved with the global Green and Sustainability Community and will work to ensure that the .GREEN TLD space will be operated in accordance with both applicable laws and consumer protections. It should be noted that there are multiple entities including governments around the world, involved with Green monitoring, certification, etc. and while DGC will continue to work closely within the Green community, it is not the role of DGC as a Registry for .GREEN to declare "who and what is green and who and what is not green."

DGC's plans are for .GREEN to be an inclusive space and to welcome in those entities and individuals, products, and ideas who are interested in Green online, who are in the process of going green or who desire to become greener - this is already how this important global movement grows. It grows freely. This is a perfect match for the open Internet. DGC has included in its application the ability to take action against .GREEN domain names that are being used in a negative or harmful way toward Green and Sustainable activities.

GAC Advice - 5. Registrants must be required by the registry operators to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of

GAC Advice Response Form for Applicants

registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

The DGC application for .GREEN includes strong safeguards and adherence to all ICANN required (via the Applicant Guidebook) protections and safeguards. In addition, there are contractual safeguards that are built into the Registry Agreement DGC will sign with ICANN as well as additional safeguards for Registrants given DGC will only work with Registrars who have signed the 2013 RAA with ICANN.

Category 1 – Consumer Protection, Sensitive Strings, and Regulated Markets

DotGreen Community, Inc. has noted that there are three descriptive types of Category 1 which are listed by the GAC. They are: Consumer Protection, Sensitive Strings, and Regulated Markets. Below we make the distinction that not all apply to the .GREEN string.

Consumer Protection

Research behind .GREEN shows that Consumer protection will be enhanced through the deliberate use of .GREEN domain names by the Green Community on the Internet due to the intrinsic traits and benefits of the Internet, such as networking, sharing, and transparency. The Green Movement has grown by itself, and will continue to do so even faster online with the use of the .GREEN TLD. DGC's adherence to all ICANN policies, the New gTLD Guidebook, the Registry Agreement and working only with Registrars who sign the 2013 RAA will ensure the best possible outcome for the Internet users of .GREEN and ultimately the consumer.

Sensitive Strings

The GAC has recognized that .GREEN is a sensitive string. The term GREEN has already been identified with by governments, initiatives, not-for-profit organizations, businesses, people and their technologies who share the values associated with the definition of the word GREEN. Allowing .GREEN delegation to an applicant who is unsupported by the Green Community would cause detriment to those all around the world who already identify with this sensitive term today. Internet users may see this as a Greenwashing by ICANN to declare a new .GREEN TLD run by a registry from the Internet business who is not Green and is not involved with Green or the Community. Greenwashing of the .GREEN TLD even before it launches would cause Public Detriment to the Green Community who take pride and who understand GREEN.

The word GREEN is not regulated in the world and cannot be regulated today as a word. Therefore, .GREEN is not a regulated or regulate-able market. We understand what the GAC is looking for. However, It is not the job of a TLD registry operator to decide the definition of the international and generic word GREEN. It is applicable to many things, ideas, even people and their individual approaches to living. No one entity can possibly certify a community or a movement of the masses such as GREEN and yet, the movement exists and it is good.

Regulated Markets

This is not applicable to .GREEN as GREEN is not a regulated market.

GAC Advice Response Form for Applicants

The GAC Further Advises the Board (Items 6-8)

6. At the time of registration, the registry operator must verify and validate the registrants' authorizations, charters, licenses and/or other related credentials for participation in that sector.

This item is not applicable to .GREEN as explained previously. "GREEN" is not a regulated sector, and because of its broad definition, it can never be a regulated sector. Parts of the Green Movement can be specialized and regulated but not the overarching term or generic word Green which is used to apply to a millennia of things.

7. In case of doubt with regard to the authenticity of licenses or credentials, Registry Operators should consult with relevant national supervisory authorities, or their equivalents.

This item is not applicable to .GREEN as explained previously. "GREEN" the word is not a regulated sector, there is no license or credentials needed to use or apply the same generic word "GREEN" to thoughts, ideas, things, way of life, etc. for millions of diverse people. Therefore there is no relevant national supervisory authority or equivalent to consult with.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Once again "GREEN" is not regulated as a generic term, therefore this part of GAC Advice does not apply to .GREEN. At the time DGC applied to ICANN, there was no requirement of expertise needed for validating licenses, documents, programs, and regulations other than what is required in the Industry to run and manage a TLD.

The last section of GAC Advice DGC will address is Section 5 (Annex II) Public Interest Commitments Specifications (PIC) – DGC did submit PIC's related to its continuing and direct involvement in ensuring the .GREEN TLD is operated in the best interests of the global Green Community and Internet users. Given the GAC Advice provided relative to PIC's pertains to ICANN's implementation of the PIC process, DGC will provide no further comments on this area other than to re-enforce our commitments to our PIC's submitted and the following:

FACT: DGC was originally founded for the sole purpose to help people and planet for the global Public Interest. DGC's initiative and business plan was designed by a collaboration of university faculty, green MBA students, environmental organizations, and business experts for the purpose of bringing to the world its first environmental Top Level Domain for the Public Interest .

This concludes the response from DGC. Thank you for your attention to this very important portion of the new gTLD program process. DGC wishes to thank ICANN for the opportunity to respond to the GAC Advice offered to the ICANN Board with regards to the new gTLD program, and the .GREEN string.

OPTIONAL READ

GAC Advice Response Form for Applicants

Below is further explanation and examples of why the generic word GREEN is not a regulated market which a few believe it is, and why GREEN cannot be regulated simply as a word or term. We offer some stories / examples below for the reader who may think GREEN is a regulated market. If the reader is in agreement that .GREEN is not affected by GAC's advice as a regulated market, then there is no need to continue reading as our official response to the GAC Advice to ICANN is all stated above.

DGC understands the need for third party and governmental certification companies for industry and for products, etc. However, this must not be confused with regulating a word and its definition that so many people have already been using around the world in their own way such as "GREEN". Regulation is an important component to certification programs. And certification programs are vastly respected and needed in the Green Movement. Certification is built on disciplined and measurable criteria. Regulation, like certification is generally industry specific and dictates the activity, action, process, expertise, or methodology of a specific industry sector or more likely a specific part of an industry - making such an activity, or product "certifiable." There is a big difference between a certifiable set of criteria for processes vs. a generic word used around the world to describe all kinds of things such as an approach to life, business, people, ideas, places and things.

The .GREEN TLD is an exciting tool that will be used by people all over the world to spread the knowledge and awareness of various 3rd party certification programs along with the Green Movement. DGC and Internet users recognize certifications are a serious part of the Green Movement and can be found easily at future .GREEN websites such as LEEDs.green, homemadecakes.green, travel.green, or myideas.green. ICANN must understand that GREEN itself, is not a "regulated market", it is a generic "word" with a diverse meaning to many. An attempt to regulate "GREEN" as a word which belongs to the people of the world, not to regulators or governments, or even TLD managers, will not work. GREEN is a word that has never been regulated by anyone before. The term GREEN, the Green Movement and the ability of Internet users and the Green Community have to use the .GREEN TLD to rapidly spread the awareness and education about going GREEN in a multitude and diverse number of ways for Public Interest is required.

EXAMPLES:

Why Green certification is not the same as certifying the word GREEN (as a standard meaning – one size fits all in all genres)

GREEN means many things, for example: A car company wants to use "GREEN" to present their innovative electric motor technology, which some would agree is better for the environment. However, the bicycle coalition objects to any car company using "GREEN" to certify themselves because manufacturing and driving cars is not GREEN according to them. Meanwhile the Vegetarian Association objects because some of the cyclists eat meat. And they object only to cars that have leather seats. Yet they all agree that they themselves and each other are part of the GREEN Movement and are happy to have .GREEN domain names. Again, GREEN has many different meanings to many different people in and around lifestyle, humanitarian issues, business, environmental, regional, and even thoughts, causes and personal moral choices.

GAC Advice Response Form for Applicants

Certified Products: Individual products such as shampoo, or specific industries such as egg farming which may have serious certifications and regulations built on scientific criteria about shampoo and poultry can and may be regulated and certified, not the definition of the widely used word “GREEN.” The .GREEN TLD is an opportunity for registrants to use “.GREEN” as an online street name, like a location of where they want to do business such as a farmers market and who their values are likely to be aligned with. If consumers want certification they will seek industry and product specific certifications that are reputable in the certification industry as well as the industry of interest. These certifications are based on real science and in depth monitoring per industry requirement and are extremely detailed and exhaustive and ever changing with new discoveries, innovation, and technology. They are also usually specialized to one sector or even to one product. This is amazing work but not the role or the place of a registry operator.

Not a Regulated Market Sector: .GREEN may be loosely associated as being a market sector, yet “GREEN” does not have clear and / or regulated entry requirements as the GAC may suggest. People all over the world have been using the generic term “GREEN” and the movement is freely growing both in size and quality - without any certification program specific to the right to use the word “GREEN” by itself to describe a value, a cause, a concept which differs in meaning from one consumer to the next.

Example that Green is not a Regulated Market Sector: A young woman in Portland, might call into a public radio station, and declare, “I think I will plan a GREEN birthday party.” She did not have to be certified to use the word GREEN in her idea or in her public statement. Furthermore, there is no “GREEN” law or regulation officer that will be checking on the components of her party certifying if she can call her activity GREEN publically or privately. She can go to different sites: [birthdays.green](#), [bakery.green](#), [events.green](#) to decide just exactly what services she wants to include in her GREEN birthday party. Her guests will likely applaud her desires to go green and may even get some inspiration and good ideas for their own parties. Not all her guests are vegans, so she herself can decide if adding pasture raised local chicken teriyaki to her otherwise vegetarian menu is in keeping with her GREEN ideals and values. She would be pleased to find what she needed at [sustainablefarms.green](#), and was happy to call [taxicab.green](#) to pick up her parents from the airport. Today she is allowed to purchase [MyGreenBirthdayParty4657.com](#) without regulation, however, it is not available, so she buys [myBirthdayParty.green](#) to blog and spread the GREEN information and news of her party. She wants to make an impact by spreading awareness and encouragement to others to go green the way she already does on the phone, or on Facebook. But imagine if GREEN was regulated. The GREEN Community across the world would likely not benefit from her great ideas and experience because she invited guests who arrived by airplane and perhaps that was part of someone’s criteria who wanted GREEN to be a word of certification.

New gTLDs are about self-organization, not regulation. The following example shows further how conducting periodic post registration checks for the purpose of establishing the “GREEN-ness” of a registrant is simply not plausible for any government, entity, or registry trying to attempt to regulate GREEN across a timeline of ownership of a domain name for a world of diverse people, the choices they make, and their various changeable situations

Example: The usage of water is a very “GREEN” issue all over the world. Imagine the registrant who purchases [FlowerHobby.green](#) while living in Ireland. He runs a popular blog which shares

GAC Advice Response Form for Applicants

information to millions of Internet users about how to organically grow an ornamental garden, making a measurable and positive impact in the Green Movement. If someone wants to get their garden certified, they will go to their local and specific authority with the expertise on certification of organic gardens, not a .GREEN TLD manager. For discussion purposes, let's assume the .GREEN registry was able to develop "GREEN" criteria for a flower hobbies so he could be certified with a .GREEN domain name. Later he moves to Las Vegas, and starts a backyard garden, and keeps his successful website and domain name. Should a registry operator investigate if he has indeed started a garden at his new home? Should the registry notice that his backyard flowers are no longer surviving on Ireland's rainwater? The environmentalists don't want any people living in the desert, because the water is imported from rivers hundreds of miles away harming fish and ecological systems. The conclusion might be that no one living in Las Vegas would be entitled to a .GREEN name. Or a conclusion could be that if someone moves, they should re-apply and possibly lose the right to maintain their thriving business at the same domain name.

Conclusion: Attempting to legislate the meaning of the word GREEN invites disunity, lawsuits, dysfunction and will destroy the opportunity for Internet users and the people of the Green Community to contribute, collaborate and progress the global Green Movement with an open flow of information on the Internet full of choice, ideas, science, education, and innovation on .GREEN websites. New gTLDs offer the Internet user a sense of organization and meaning, to an online space. Registrants want to be associated with their communities, or found by their target audience or markets. Generic words are not regulated across all genres, industries, products, thoughts, actions, lifestyles, etc. - therefore neither can generic TLDs.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Plan Bee LLC
Application ID	1-888-47096
Applied for TLD (string)	build

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”) and focuses specifically on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice.

In short, we find it disconcerting that the GAC chose to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

That being the case, we are faced with a choice. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

GAC Advice Response Form for Applicants

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement (“RA”) that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion – we are in the territory of take it or leave it. Faced with such, we have no option but to agree to the Safeguards in part as further described below.

However, we would flag that such agreement and response is made under duress.

Safeguards

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO’s creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested “technical analysis”. Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

GAC Advice Response Form for Applicants

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

GAC Advice Response Form for Applicants

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully
Plan Bee LLC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	GMO Registry, Inc.
Application ID	1-890-52980
Applied for TLD (string)	.INC

Response:

GMO Registry supports many of the tenets of the policy advice contained in the April 2013 GAC Beijing Communiqué and has already incorporated many of the same principles into our vision for a .INC namespace, as demonstrated in the publicly available policy section of our new gTLD application. We also express a willingness to examine ways in which any advice the ICANN Board decides to take on, may be adopted into the operating policy for .INC through Public Interest Commitment Specifications or other means. That said, we have serious reservations about introducing new policy requirements at this stage of the process, the disadvantage it may cause new gTLD operators in competing against legacy TLDs who are not subject to the same requirements, and that adoption of the GAC’s advice would cause significant further delays to the introduction of new gTLDs.

Safeguard Advice and Advice on Consumer Protection, Sensitive Strings, and Regulated Markets

On the grounds of process, GMO Registry raises a number of concerns about attempts to introduce new rules or requirements long after the application deadline and when some applicants have already passed Initial Evaluation. Further, beyond the “Consensus Objections”, objections to religious terms and the “Strings for Further GAC Consideration”, much of the Beijing Communiqué contains advice outside of the scope laid out in Module 3.1 (i-iii) of the Applicant Guidebook under which the GAC may advise at this stage of the process.

The GAC had every opportunity to raise these issues between 2005 and 2011 throughout the development of the new gTLD program, and arbitrarily imposing new rules at this stage of the process undermines the ICANN multi-stakeholder model, and has serious implications for new gTLD applicants that have already made a significant investment in their applications and developed business models around the requirements of the Applicant Guidebook. Indeed, in its 2007 GAC Principles Regarding New gTLDs, the GAC itself says “All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process.”

We also believe that applying the safeguards and consumer protections only to new gTLDs would not only limit the intended result, but would harm the program's goal of "enhancing competition" in the Internet namespace by placing an increased financial and operational burden on new gTLDs that be a disadvantage in competing against existing TLDs.

As such, GMO Registry urges the ICANN Board to interpret the Safeguard, Consumer Protection, Sensitive Strings, and Regulated Markets advice as policy advice, and that any new policy requirements should be developed in the transparent, "highly participative, fair, and balanced process" in line with ICANN's mission and should apply to all gTLDs. Further we ask that the Board not allow the GAC policy advice to further delay the introduction of new TLDs.

Safeguards for Corporate Identifiers

As a namespace intended for companies, trust is crucial to the mission and purpose of .INC and as such GMO Registry has developed comprehensive policies aimed at providing maximum protection for stakeholders, and establishing and preserving a reputation as a trusted namespace that corporations of all sizes will adopt as their primary online identity. We plan to implement proven security measures at every level of the registry business and technical operation including stringent security policies and procedures, as well as comprehensive abuse handling mechanisms to mitigate security threats to the TLD.

The GAC advice recommends three additional safeguards for strings labeled as "corporate identifiers" including .INC. The recommendations appear to be aimed at protecting stakeholders and mitigating abuse. As shown above, these same objectives are shared by GMO Registry.

GMO Registry's application for .INC describes plans to put in place the following registrant and string eligibility requirements.

1. Registrant Eligibility Requirements

Registrants must be a legally established corporation or company.

All .INC domain name registrants will be required to prove that the companies or organizations are legally established by providing the following company information at the time of domain name registration:

- Country Name where the company is established
- Company Identification Number Type (Business ID, Tax ID, VAT, etc.)
- Company Identification Number

2. Restrictions on Domain Name Strings

Registrants will be entitled to register domain names that are identical or similar to their company or corporation name, current or future trademark, business name, trade name, business identifier, names under which they are commonly known, slogans, acronyms, etc., including combinations thereof, in the .INC TLD.

All .INC registrars will be required to include, policies and restrictions in the registration agreement with their customers, and registrants must agree and comply. This requirement is essentially aligned with the first of the GAC's safeguards (below) and even goes further in that it also defines eligible strings.

6. At the time of registration, the registry operator must verify and validate the registrants' authorisations, charters, licenses and/or other related credentials for participation in that

sector.

While GAC recommends validation of the registrants' qualifications, GMO Registry believes that validation is better entrusted to the authorities that issue the qualifications and have the required resources and understanding of relevant laws in their respective countries or administrative regions.

The GAC's second and third safeguards for corporate identifiers reinforce the first through additional verification and periodic monitoring. GMO Registry also seeks to reinforce the above requirements, but has proposed to do so through a comprehensive Registration Policy Compliance Dispute Resolution Policy. Under the policy, complaints would be directly handled by the registry operator and its appointed dispute resolution provider, and the registry would reserve the right to suspend, delete or lock any domain name in violation of Registration Policies.

Not only is this consistent with established industry practice, we also believe that monitoring would be of limited effect as registrants are able to register domain names that are not identical to their corporate name. Rather than forcing registries to monitor 24/7, providing means for third parties to file complaints is a far more effective approach.

The Registration Policy Compliance Dispute Resolution Policy is described in our application for .INC as follows.

Registration Policy Compliance Dispute Resolution Policy

The registry will also develop a Registration Policy Compliance Dispute Resolution Policy so as to allow third parties to file complaints against purported violations of the policies. Complaints may be filed on at least the following bases:

- Registrant Eligibility
- Name Selection

Complaints may be filed to the registry operator of .INC directly, and will be handled by the registry operator or its appointed dispute resolution provider.

After receiving a complaint, the registry operator of .INC or its appointee will investigate the claim. If the claim is valid, and depending on the nature of the violation, the complaint will be resolved by one or more of the actions from the following non-exhaustive list:

- working with the registrant to remedy the situation
- referral of the matter to the abuse point of contact
- suspending, deleting or locking the domain name in question

In addition, our application outlines a strict Abusive Use Policy that includes plans for a 24-hour abuse support window, as well as policy regarding accuracy of registration information and restriction of Whois Proxy services. The registry operator reserves the right to deny, cancel or transfer any registration or transaction or place any domain name on lock, hold or similar status in the event of a violation of either of these policies.

GMO Registry seeks to reassure the ICANN Board, and the GAC that while the proposed means of achieving the shared goals, protecting stakeholders and mitigating abuse, differs in some aspects between the GAC advice and our own .INC application, the objectives themselves are

GAC Advice Response Form for Applicants

very much aligned. However, should the ICANN Board decide to adopt the three additional safeguards for “corporate identifiers”, GMO Registry is willing to consider any necessary action including an application change request, or the adoption of PIC specifications. Finally we would remind the ICANN Board that the Applicant Guidebook specifies that “the receipt of GAC advice will not toll the processing of any application”, and also notes that there are multiple applicants for .INC and asks that any processes adopted to incorporate this advice does not delay the processing of our applications and is implemented in a way that is fair to all applicants.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	dotversicherung-registry GmbH
Application ID	1-891-92750
Applied for TLD (string)	VERSICHERUNG

Response:

dotversicherung-registry GmbH welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

dotversicherung-registry GmbH welcomes and supports the positions in the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** Community-based application for .VERSICHERUNG ***

We welcome and support the GAC Advice as published on April 11, 2013, section IV” GAC Advice to the ICANN Board”, 1.e. “Community Support for Applications”:

The GAC advises the Board: i. that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

We serve the Interests of the Community and the Public.

GAC Advice Response Form for Applicants

Our application for the string .VERSICHERUNG is a community-based application. The .VERSICHERUNG Community are the multiple stakeholders in Germany, Austria, Liechtenstein and Switzerland involved in the regulation and registration of companies eligible for services on the term “VERSICHERUNG” as well as companies and individuals offering “VERSICHERUNG” related services.

We have been successfully working since 2010 on building a long-lasting relationship to the various stakeholders of the VERSICHERUNG community including

1. Governmental organizations and authorities in Austria, Germany, Liechtenstein and Switzerland;
2. Commercial associations in Austria, Germany, Liechtenstein and Switzerland representing about 13.000 companies and insurance intermediaries of the VERSICHERUNG community;
3. Companies in Austria, Germany, Liechtenstein and Switzerland being member of the VERSICHERUNG community.

The VERSICHERUNG Community members have expressed a collective and clear supporting opinion on our application by supporting documents.

We have consulted with all relevant public and private entities that make up the VERSICHERUNG Community in Austria, Germany, Liechtenstein and Switzerland.

*** General principles of operations for .VERSICHERUNG by dotversicherung-registry GmbH ***
dotversicherung-registry GmbH would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

As the insurance market is regulated in Austria, Germany, Liechtenstein and Switzerland it is needless to say that we require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by dotversicherung-registry GmbH for .VERSICHERUNG based on General Safeguards ***

dotversicherung-registry GmbH, the applicant for the .VERSICHERUNG top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - dotversicherung-registry GmbH will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. dotversicherung-registry GmbH will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - dotversicherung-registry GmbH will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, dotversicherung-registry GmbH will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If dotversicherung-registry GmbH identifies security risks that pose an actual risk of harm, dotversicherung-registry GmbH will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - dotversicherung-registry GmbH will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. dotversicherung-registry GmbH will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - dotversicherung-registry GmbH will ensure that there is a mechanism for making complaints to dotversicherung-registry GmbH that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement,

fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, dotversicherung-registry GmbH shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

dotversicherung-registry GmbH assessed that the .VERSICHERUNG gTLD will require further targeted safeguards, to address specific risks, and to bring registration policies in line with the respective offline arrangements. Therefore dotversicherung-registry GmbH incorporated in the application several further safeguards:

7. At the time of registration, the registry operator will verify and validate the registrants' authorizations, charters, licenses and/or other related credentials for participation in that sector by using official registers. Only registrations from registrants, where the eligibility criteria can be positively verified, will be accepted.

8. In case of doubt with regard to the authenticity of licenses or credentials, dotversicherung-registry GmbH will consult with relevant national supervisory authorities, or their equivalents. This includes consultation with the advisory board.

9. dotversicherung-registry GmbH will conduct periodic post-registration checks on all registrants to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve. In particular, dotversicherung-registry GmbH is committed to verify registrants' validity and compliance with the above requirements on an annual basis.

*** Detailed commitments by dotversicherung-registry GmbH for .VERSICHERUNG based on Regulated Industries and Consumer Protection Safeguards ***

Furthermore, dotversicherung-registry GmbH commits to operate the gTLD in a way that is consistent with applicable laws, as this TLD is related to consumer protection and regulated markets.

The following safeguards will apply to .VERSICHERUNG:

1. dotversicherung-registry GmbH has included in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

2. dotversicherung-registry GmbH requires registrars at the time of registration to notify registrants of this requirement.

3. dotversicherung-registry GmbH requires that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures

GAC Advice Response Form for Applicants

commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

4. dotversicherung-registry GmbH established several years ago a working relationship with the relevant regulatory and industry self-regulatory bodies, including the development of a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities. This includes the advisory board, which is constituted with representatives of the aforementioned bodies.

5. Registrants will be required by dotversicherung-registry GmbH to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

*** Detailed commitments by dotversicherung-registry GmbH for .VERSICHERUNG based on Restricted Registration Policies ***

dotversicherung-registry GmbH welcomes and supports the GAC Advice as stated under Category 2 – Restricted Registration Policies:

The GAC advises the ICANN Board:

1. Restricted Access

As an exception to the general rule that the gTLD domain name space is operated in an open manner registration may be restricted, in particular for strings mentioned under category 1. above. In these cases, the registration restrictions should be appropriate for the types of risks associated with the TLD. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars or registrants to an undue disadvantage.

dotversicherung-registry GmbH has setup appropriate registration policies to prevent any risks associated with the operation of .VERSICHERUNG like consumer confusion, financial fraud and phishing According to the eligibility requirements of dotversicherung-registry GmbH, only members of the regulated VERSICHERUNG Community are eligible to register domain names under .VERSICHERUNG. According to the registration policies, eligibility will be validated before domain names are approved and re-validated on an annual basis. The policies for abusive have been setup and are described under the general and specific safeguards.

dotversicherung-registry GmbH reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on community feedback including the GAC.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Response:

Summary

dotreise GmbH welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

dotreise GmbH welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** General principles of operations for .REISE by dotreise GmbH ***

dotreise GmbH would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

GAC Advice Response Form for Applicants

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures³. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

**** Commitments by dotreise GmbH for .REISE based on General Safeguards ****

dotreise GmbH, the applicant for the .REISE Top-Level-Domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - dotreise GmbH will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. dotreise GmbH will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

2. Mitigating abusive activity - dotreise GmbH will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

GAC Advice Response Form for Applicants

3. Security checks - While respecting privacy and confidentiality, dotreise GmbH will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If dotreise GmbH identifies security risks that pose an actual risk of harm, dotreise GmbH will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

4. Documentation - dotreise GmbH will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. dotreise GmbH will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - dotreise GmbH will ensure that there is a mechanism for making complaints to dotreise GmbH that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, dotreise GmbH shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

**** Commitments by dotreise GmbH for .REISE based on Consumer Protection Safeguards ****

Furthermore, dotReise GmbH commits to operate the gTLD in a way that is consistent with applicable laws, as this TLD is related to consumer protection. The following safeguards will apply to .REISE:

1. dotreise GmbH has included in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

2. dotreise GmbH requires registrars at the time of registration to notify registrants of this requirement.

3. dotreise GmbH requires that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

4. dotreise GmbH has established a working relationship with the relevant regulatory and industry self-regulatory bodies, including the development of a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities. This includes the advisory board, which is constituted with representatives of the aforementioned bodies.

GAC Advice Response Form for Applicants

5. Registrants will be required by dotreise GmbH to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Dotreise GmbH fully supports the Advice by the GAC: "Austria, Germany, and Switzerland support requirements for registry operators to develop registration policies that allow only travel-related entities to register domain names. Second Level Domains should have a connection to travel industries and/or its customers." dotreise GmbH would like to note that registration policies will be setup according to this request. However dotreise GmbH reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on community feedback including the GAC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotSaarland GmbH
Application ID	1-893-50963
Applied for TLD (string)	.SAARLAND

Response:

In response to the GAC communiqué we would like to refer to the details of our application, which provides for an adequate registration and anti-abuse policy. We believe the proposals made by the GAC - as far as they are reasonable - have been adequately covered by our initial application.

Safeguards:

- 1) We believe whois checks on a registry level to be superfluous based on the content of the 2013 RAA.
- 2) The anti-abuse policy and abuse handling procedures detailed in our application have covered this proposal sufficiently. Our RRA will therefore include provisions requiring registrars to include said policy in their registration agreements.
- 3) The anti-abuse policy and abuse handling procedures detailed in our application have covered this proposal sufficiently. We do not see our role as provider of domain names extending to validating content, however. Such tasks should best be relegated to hosting service providers where content resides.
- 4) See 1) and 3)
- 5) This proposal shifts the current role of the registrar to the registry. As we believe in the registry-registrar model, we propose that the handling of abuse complaints by the registry should be limited – as it is now – to informing the registrar about the complaint and requesting an investigation. The registrar has the direct customer relationship with the registrant and is best equipped to review and act upon any complaints. While we propose a direct registry abuse contact in our application, we envision this as a role acting in concert with the registrar.
- 6) It is the role of the registrar to enact consequences to any abuse and violation as it is the registrar that holds the contractual relationship with the registrant.

Categories:

- 1) Having reviewed the categories, we are of the opinion that as a geographic Top Level Domain, .SAARLAND does not fit into any of the categories described by the GAC

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondent:

Applicant Name	dotBERLIN GmbH & Co. KG
Application ID	1-902-9993
Applied for TLD (string)	BERLIN

Response:

dotBERLIN GmbH & Co. KG, the applicant for the .BERLIN top-level domain, welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

dotBERLIN GmbH & Co. KG welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** Community-based application for .BERLIN by dotBERLIN GmbH & Co. KG ***

We welcome and support the GAC Advice as published on April 11, 2013, section IV” GAC Advice to the ICANN Board”, i.e. “Community Support for Applications”:

GAC Advice Response Form for Applicants

“The GAC advises the Board: i. that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.”

We serve the Interests of the Community and the Public

Our application for the string .BERLIN is a community-based application. The .BERLIN Community are multiple stakeholders from the City of Berlin. We have been successfully working since 2005 on building a long-lasting relationship to the various stakeholders of the respective community including

1. Governmental organizations and authorities
2. Commercial and non-commercial organisations
3. Citizens

The community members have expressed a collective and clear supporting opinion on our application by supporting documents. We have consulted with all relevant public and private entities that make up the community.

*** General principles of operations for .BERLIN by dotBERLIN GmbH & Co. KG ***

dotBERLIN GmbH & Co. KG would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.”

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.

GAC Advice Response Form for Applicants

- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by dotBERLIN GmbH & Co. KG for .BERLIN based on General Safeguards ***

dotBERLIN GmbH & Co. KG will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination.

The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - dotBERLIN GmbH & Co. KG will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. dotBERLIN GmbH & Co. KG will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - dotBERLIN GmbH & Co. KG will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, dotBERLIN GmbH & Co. KG will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If dotBERLIN GmbH & Co. KG identifies security risks that pose an actual risk of harm, dotBERLIN GmbH & Co. KG will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - dotBERLIN GmbH & Co. KG will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. dotBERLIN GmbH & Co. KG will maintain these

GAC Advice Response Form for Applicants

reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - dotBERLIN GmbH & Co. KG will ensure that there is a mechanism for making complaints to dotBERLIN GmbH & Co. KG that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, dotBERLIN GmbH & Co. KG shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

dotBERLIN GmbH & Co. KG would like to note that registration policies will be setup according to this request.

However dotBERLIN GmbH & Co. KG reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	Allfinanz Deutsche Vermögensberatung Aktiengesellschaft
Application ID	1-903-23146
Applied for TLD (string)	allfinanzberater

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

Respondent:

Applicant Name	Deutsche Vermögensberatung Aktiengesellschaft DVAG
Application ID	1-904-3145
Applied for TLD (string)	vermögensberatung

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLDs in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under any of our gTLDs will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

As the applicant for two gTLDs mentioned in the GAC Communiqué:

.VERMÖGENSBERATER and .VERMÖGENSBERATUNG

we are open to include our proposed safeguard and abuse prevention mechanisms as described in our responses to Q28, Q29, and Q30 and 30b (including increased security requirements to be implemented in the registry-registrar agreement, such as pin-based login, monitoring of content on websites, requirements to registrants to act in accordance with local legislations within our industry). We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public Interest Commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

GAC Advice Response Form for Applicants

As we have already in detail described to ICANN our additional safeguards as part of the responses to the Application, including

- an extensive IT Risk Assessment Plan,
- manual verification processes of users,
- use restrictions and consequences, if the use of the domains are not in compliance with our policies

we do not wish to describe these mechanisms in details in this context, as we understand that this response will be made publically available.

In general we support that additional safeguards are implemented for "sensitive" strings in a manner balancing the achieved security effects with the nature of the domain name industry (registry, registrar, registrants) in such a way that an increased level of security can be achieved without placing an undue burden on registry operators, registrars, and registrants to a degree that they may find these specific new gTLDs unattractive, and instead turn to other less safe TLDs. It is our opinion that this would be a shame and be counterproductive to the stated goals of the new gTLD program. Should the ICANN board or the GAC for that matter have a need for additional details on our enhanced safeguards, we are willing to share that with the GAC/ICANN Board. However, we hope that we do not have to disclose these safeguards to the public, as they are of course confidential by nature.

Thank you very much for this opportunity to highlight our view on how to operate sensitive strings.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, "[Application ID] Response to GAC Advice" (for example "1-111-11111 Response to GAC Advice"). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Deutsche Vermögensberatung Aktiengesellschaft DVAG
Application ID	1-904-62612
Applied for TLD (string)	dvag

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

GAC Advice Response Form for Applicants

The Government Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotRealEstate LLC
Applicant ID	1-907-1363
Applied for TLD (string)	.REALESTATE

Response:

The National Association of REALTORS® (NAR) has engaged DotRealEstate LLC to apply for, obtain and operate the .REALESTATE gTLD under direction from NAR.

Founded in 1908 with the specific focus to serve the interests of real estate practitioners, NAR is a globally recognized industry self-regulatory organization for REALTORS® including administration of a strict Code of Ethics and Professional Standards which has served to mitigate risks to the public for 100 years. In this role, NAR believes and conducts its actions in ways to promote trust. The REALTOR® designation, invented by NAR, is the way a person can be credentialed in the offline world for the purpose of conducting transactions related to real estate under a Code of Ethics and generally accepted industry rules and guidelines.

An objective we have is to bring industry accepted practices from the offline world to the online world by way of the .REALESTATE gTLD. For example, NAR stands in perfect position with the expertise to incorporate such credentialing into the process of domain name registration for .REALESTATE. As the applicant for .REALESTATE, it is therefore consistent that we are supportive of the GAC Advice in principle.

While .REALESTATE was not named under Section IV or Annex I of the GAC Advice, for strings specifically cited under Category 1 we support advice relative to: an acceptable use policy that registrants comply with all applicable laws; to require registrars at the time of registration to notify registrants of the acceptable use policy; to implement reasonable and appropriate security measures; to mitigate as much as possible the risks of fraudulent and other illegal activities; and to provide a single point of contact for various types of complaints.

GAC Advice Response Form for Applicants

Further, for .REALESTATE, we think it is prudent for the registry operator to verify registrant credentials at the time of registration such as we've described doing in response to Question 18; to consult with an authority in case of doubt with regard to the authenticity of such credentials; and to conduct periodic checks post-registration to ensure registrant validity and compliance consistent with such credentialing requirements.

We agree with GAC advice with regards to Restrictive and Exclusive access. Lastly, we support safeguards for WHOIS verification checks; mitigating abusive activity; security checks, documentation, making and handling complaints, and consequences as advised by the GAC should apply to all new gTLD's.

In providing its advice for new gTLD's, we believe the GAC has acted consistent to its role as defined in the ICANN by-laws. We also believe the substance of the GAC Advice to be reasonably within our expectations as provided for in Section 3.1 of the Applicant Guidebook.

DotRealEstate LLC stands ready to work with ICANN to implement these goals from the GAC Advice into the registry operations of .REALESTATE in ways which will serve the public interest. ICANN may also use this response in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

GAC Advice Response Form for Applicants

Respondent:

Applicant Name	dotHot LLC
Applicant ID	1-907-22514
Applied for TLD (string)	.HOT

Response:

On behalf of dotHot LLC, the new gTLD applicant for .HOT (Applicant Number 1-907-22514), we are pleased to provide our response to the GAC advice received by the ICANN Board specific to the “six safeguards that should apply to all new gTLD’s”:

GAC Advice, WHOIS verification and checks: Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate, or incomplete WHOIS data at least twice per year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Our Response: We agree in principle.

GAC Advice, Mitigating abusive activity: Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright

GAC Advice Response Form for Applicants

infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree.

GAC Advice, Security checks: While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Our Response: We agree in principle.

GAC Advice, Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Our Response: We agree in principle.

GAC Advice, Mitigating and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree.

GAC Advice, Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and

GAC Advice Response Form for Applicants

violations of the requirement that the domain name should not be used in breach of applicable law; these conditions should include suspension of the domain name.

Our Response: We agree.

ICANN may also use this response in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

Respondent:

Applicant Name	Medistry LLC
Applicant ID	1-907-38758
Applied for TLD (string)	.MED

Response:

GAC Communiqué –Beijing, People’s Republic of China

- Under Annex 1, Category 1, the GAC advises 5 safeguards to apply to particular categories of new gTLD’s.
- The GAC labels “Health and Fitness” as one such category.
- The GAC has named the string .MED within the Health and Fitness category.

On behalf of Medistry LLC, the new gTLD applicant for .MED (Applicant Number 1-907-38758), we are pleased to provide our response to the GAC advice received by the ICANN Board. Please find below the advice excerpts from the GAC with our response immediately following:

GAC Advice: Strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm.

Our Response: We agree with this GAC advice in principle. The Cleveland Clinic (“Cleveland Clinic”), founded in 1921 and headquartered in Cleveland Ohio, today is a \$6 billion international medical center with 2,000+ doctors, offering world-

GAC Advice Response Form for Applicants

class hospital and outpatient care in virtually every medical specialty. Ranked each year as one of the top four hospital systems in the United States, the Cleveland Clinic is recognized for its achievements in demonstrating unusually high expertise across multiple medical and healthcare related specialties.

The Cleveland Clinic is consistently ranked by the *US News and World Report* annual report of “Best Hospitals” in numerous areas of medical specialty, including rankings of number 1 in Cardiology and Heart Surgery; number 2 in Nephrology; number 2 in Urology; number 2 in Gastroenterology; number 3 in Rheumatology; number 3 in Pulmonology; number 4 in Orthopedics; number 4 in Cardiology; number 5 in Diabetes and Endocrinology; number 6 in Neurology and Neurosurgery; number 7 in Geriatrics; number 7 in Pediatrics: Neurology and Neurosurgery; and number 9 in Cancer.

The mission of the Cleveland Clinic, a nonprofit multispecialty academic medical center, is to integrate clinical and hospital care with research and education. This mission scales worldwide in its application. Under the stewardship of the Cleveland Clinic, the .MED gTLD will aim to serve as a source identifier that accomplishes integrating clinical and hospital care with research and education in a digital world, providing a global trusted name space wherein users can come to find trusted sources for medical information. As we state in response to Question 18: “People have come to trust the care, research and education provided by the Cleveland Clinic.”

The mission/purpose of .MED is to perform as a new gTLD consistently with the standards of applicable laws, to which Cleveland Clinic’s scalable mission also subscribes. The Cleveland Clinic firmly believes that establishment of a .MED top-level domain, imbued with the principles established by the Cleveland Clinic, will promote competition, consumer trust and consumer choice within the global structure of applicable law.

GAC Advice: Registry acceptable use policy must require registrants to comply with all applicable laws including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

GAC Advice Response Form for Applicants

Our Response: We agree in principle. Registry acceptable use policy will require registrants to comply with all applicable laws.

GAC Advice: Registry operators will require registrars at the time of registration to notify registrants of the acceptable use policy.

Our Response: We agree. Registrars accredited in .MED will be required in the registry/registrar agreement to notify registrants of the .MED acceptable use policy at the time of registration, which may be modified from time to time such as in the event of any changes to applicable laws.

GAC Advice: Registry Operators will require registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Our Response: We agree. All registrants of .MED domain names who collect and maintain sensitive health and/or financial data will be required to implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

GAC Advice: Establish a working relationship with the relevant regulatory, or industry self-regulatory, body including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.

Our Response: We agree. Developing a strategy for .MED to mitigate as much as possible the risks of fraudulent and other illegal activities is consistent with the purpose of compliance with applicable law. To this end, as an established and world re-known medical institution, the Cleveland Clinic has established working relationships with numerous relevant governmental and industry regulatory bodies.

GAC Advice: Registrants must be required by the registry operator to provide a single point-of-contact for the notification of complaints or reports of

GAC Advice Response Form for Applicants

registration abuse as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Our Response: We agree. As provided for in our response to Question 28: “If you believe that a .MED domain name is or has been involved in abusive conduct, please contact our Abuse Prevention Manager at <email address> or <written address> with your complaint.”

GAC Advice: At the time of registration the registry operator must verify and validate the registrants’ authorizations, charters, licenses and/or other credentials for participation.

Our Response: We agree. As stated in response to Question 18, “Towards fulfilling this mission/purpose, domain registrations in .MED will not be real-time, but instead will be allocated by Requests for Proposals (RFPs) only. RFP applicants will at minimum be required to set forth their qualifications to integrate clinical and hospital care with research and education...” This approach to registration in .MED is consistent with the advice “to verify and validate the registrants’ authorizations, charters, licenses and/or other credentials for participation” at the time of registration.

GAC Advice: In case of doubt with regard to authenticity of licenses or credentials, registry operator should consult with relevant national supervisory authorities, or other equivalents.

Our Response: We agree. In the case of doubt with regard to authenticity of licenses or credentials, Medistry (registry operator) should consult with relevant national supervisory authorities, or other equivalents. Working closely with the Cleveland Clinic provides Medistry with a credible resource to seek such consultation.

GAC Advice: Registry operator must conduct periodic, post-registration checks with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

GAC Advice Response Form for Applicants

Our Response: We agree in principle. Medistry (registry operator) will conduct periodic, post-registration checks of any applicable licensing requirements originally permitting registration and that those permitted registration are generally conducting their activities in the interests of the consumers they serve while continuing to conform to appropriate applicable regulations.

GAC Advice, Restricted Access: As an exception to the general rule that the gTLD domain name space is operated in an open manner registration may be restricted, in particular for strings mentioned under Category 1. In these cases, the registration restrictions should be appropriate for the types of risks associated with the TLD. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage.

Our Response: We agree. As we state in response to Question 18: “It is Medistry’s intent to operate .MED as a restricted gTLD, at least as compared to open, unrestricted TLD’s such as .com and .net, consistent with its stated mission/purpose and employing the registration and use restrictions set forth herein and as promulgated by the Cleveland Clinic from time to time. The restricted nature of the gTLD, along with allocation via RFP, will help eliminate or minimize social costs, as registrants will be limited to individuals or entities which have been vetted by the Cleveland Clinic.” Further, the .MED gTLD implicates Cleveland Clinic’s internationally renowned reputation, further minimizing or eliminating social costs as compared to users/operators of unrestricted gTLD’s, which have no such reputations to protect.

Consistent with this advice by the GAC for restricted access for strings cited under Category 1, all domains in the .MED gTLD will be allocated by RFP at the sole discretion of the Cleveland Clinic pursuant to the mission/purpose of the gTLD. Consistent with this advice, we agree access to .MED should be administered in a transparent way, as we’ve described, that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage.

GAC Advice Response Form for Applicants

GAC Advice, Exclusive Access: For strings representing generic terms, exclusive registry access should serve a public interest goal.

Our Response: We agree. The Cleveland Clinic is unquestionably recognized and associated with trust and professionalism in the provision of care, research and education in the medical field. Extending this trust and professionalism to the operation and registration policies of the .MED gTLD, as captured by the mission of the Cleveland Clinic and stated purpose of the .MED gTLD, is for serving a public interest goal.

The GAC's Six safeguards for all new gTLDs:

GAC Advice, WHOIS verification and checks: Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate, or incomplete WHOIS data at least twice per year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

Our Response: We agree in principle.

GAC Advice, Mitigating abusive activity: Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. As stated in response to Question 28: "Abuse" or "abusive use" of a .MED domain name also includes violation or breach of any policies or rules regarding registration and/or use of .MED domains as set forth by the Cleveland Clinic.

GAC Advice Response Form for Applicants

GAC Advice, Security checks: While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Our Response: We agree. Additionally, we note numerous products and services are being introduced to the market place to help fulfill this need such as NameSentry (<http://architelos.com/services/namesentry/>). We confirm the registry will suspend .MED domain names found to perpetrate security threats if registrars won't.

GAC Advice, Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Our Response: We agree in principle.

GAC Advice, Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. As we state in response to Question 28: "If you believe that a .MED domain name is or has been involved in abusive conduct, please contact our Abuse Prevention Manager at <email address> or <written address> with your complaint." A similar complaint mechanism can be established for making complaints to the registry operator about inaccurate WHOIS information

GAC Advice Response Form for Applicants

and/or domains being used for malicious activity or perpetuating security risks as the case may be.

GAC Advice, Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these conditions should include suspension of the domain name.

Our Response: We agree. Providing false information and/or using a .MED domain name in breach of applicable law would result at minimum in the suspension of the domain name as this would violate any number of areas with regards to .MED registration policies, the mission of the Cleveland Clinic, and/or the purpose of the .MED gTLD. The practice of filtering all registrations in .MED by a Request for Proposal (RFP) process serves as a natural safeguard to false and/or illegal activity occurring in .MED.

ICANN may also use this response in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

GAC Advice Response Form for Applicants

The Government Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Real Estate Domains LLC
Applicant ID	1-907-41079
Applied for TLD (string)	.REALTOR

Response:

GAC Communiqué –Beijing, People’s Republic of China

- Under Annex 1, Category 1, the GAC advises 5 safeguards to apply to particular categories of new gTLD’s.
- The GAC labels “Professional Services” as one such category.
- The GAC has named the string .REALTOR within the Professional Services category.

On behalf of Real Estate Domains LLC, the new gTLD applicant for .REALTOR (Applicant Number 1-907-41079), we are pleased to provide our response to the GAC advice received by the ICANN Board. Please find below the advice excerpts from the GAC with our response immediately following:

GAC Advice: Strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm.

Our Response: We agree with this GAC advice in principle. Founded in 1908, The National Association of REALTORS® (NAR), The Voice for Real Estate®, is the

GAC Advice Response Form for Applicants

world's largest professional association, representing greater than one million members belonging to approximately 1,400 state and local associations/boards. An acknowledged leader in the real estate field NAR has worked to develop standards for efficient, effective, and ethical real estate business practices since well before there were any state/provincial or national regulatory authorities. The term REALTOR® implies a level of trust due to efforts led by NAR representing the collective interests of the public and of each of its REALTOR® members.

The term "REALTOR®", invented by NAR, is a registered collective membership mark of the National Association of REALTORS® that identifies a real estate professional who is a member of the NAR and pledges to abide by its strict Code of Ethics. The term REALTOR® is registered as a collective membership mark by NAR with the United States Patent and Trademark Office. As NAR has stepped up on the world stage both directly and through relationships with other national organizations of real estate professionals, NAR has also registered REALTOR for that or other services in the trademark offices of an additional 45 nations and the European Community.

GAC Advice: Registry acceptable use policy must require registrants to comply with all applicable laws including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

Our Response: We agree in principle. Registry acceptable use policy will require registrants to comply with all applicable laws.

GAC Advice: Registry operators will require registrars at the time of registration to notify registrants of the acceptable use policy.

Our Response: We agree. Registrars accredited in .REALTOR will be required in the registry/registrar agreement to notify registrants of the .REALTOR acceptable use policy, as those policies may evolve over time, at the time of registration.

GAC Advice: Registry Operators will require registrants who collect and maintain sensitive health and financial data implement reasonable and

GAC Advice Response Form for Applicants

appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Our Response: We agree in principle. All registrants of .REALTOR domain names who collect and maintain sensitive financial data will be required to implement reasonable and appropriate security measures commensurate with the risk associated with the offering of those services, as defined by law and/or recognized industry standards, as applicable.

GAC Advice: Establish a working relationship with the relevant regulatory, or industry self-regulatory, body including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.

Our Response: We agree. NAR is a globally recognized industry self-regulatory organization for REALTORS® including administration of a strict Code of Ethics and Professional Standards which has served to mitigate risks to the public for 100 years. NAR's scope includes working relationships with governmental or non-governmental bodies in numerous countries throughout the world.

GAC Advice: Registrants must be required by the registry operator to provide a single point-of-contact for the notification of complaints or reports of registration abuse as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Our Response: We agree. As provided for in our response to Question 28: "If you believe that a .REALTOR domain name is or has been involved in abusive conduct, please contact our Abuse Prevention Manager at <email address> or <written address> with your complaint."

GAC Advice: "In addition, some of the above strings may require further targeted safeguards, to address specific risks, and to bring registry policies in line with arrangements in place offline. In particular, a limited subset of the above strings are associated with market sectors which have clear and/or regulated entry requirements (such as: financial, gambling, professional services, environmental, health and fitness, corporate identifiers, and charity) in

GAC Advice Response Form for Applicants

multiple jurisdictions, and the additional safeguards below should apply to some of the strings in those sectors”.

Our response: We agree. For example, one of the criteria commonly applied in determining eligibility for REALTOR® membership in NAR is that the applicant have a current, valid license or certification from the relevant government authority. This approach preserves the integrity of the profession by mirroring as a part of the qualification prerequisites to be a REALTOR®, the business entry requirements put in place by the applicable governmental regulatory body. If not in fact, then at least in effect the offline requirements of the governmental regulatory body are incorporated into the registration process of .REALTOR domain names.

GAC Advice: At the time of registration the registry operator must verify and validate the registrants’ authorizations, charters, licenses and/or other credentials for participation.

Our Response: We agree. At time of registration registry operator will verify with NAR that the domain name registrant is a member of NAR or licensed to use the term REALTOR®. As stated in response to Question 18: ““only NAR, REALTORS®, NAR members, NAR affiliates (including affiliated institutes, societies and councils), NAR licensees and parties otherwise in a contractual relationship with NAR relating to use of the REALTOR® mark will be permitted registration in .REALTOR.” Such status will be verified at time of registration.

GAC Advice: In case of doubt with regard to authenticity of licenses or credentials, registry operator should consult with relevant national supervisory authorities, or other equivalents.

Our Response: We agree. Registry operator will consult with NAR in case of doubt with regard to authenticity of any licensing credentials.

GAC Advice: Registry operator must conduct periodic, post-registration checks with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

GAC Advice Response Form for Applicants

Our Response: We agree. Registry operator will conduct periodic, post-registration checks against the criteria originally permitting registration. As stated in response to Question 18: “To the extent a registrant/REALTOR® lapses in membership as a REALTOR®, or a registrant/NAR member ceases to be an NAR member, or a registrant/NAR affiliate ceases to be an NAR affiliate, or a registrant/NAR licensee ceases to be an NAR licensee, or a registrant/NAR contracted-party ceases to be an NAR contracted party, registration of the affected domain will have to be withdrawn.”

With regards to REALTORS® conducting their activities in the interests of the consumers they serve, the very first Article of the NAR Code of Ethics and Standards of Practice states, “When representing a buyer, seller, landlord, tenant, or other client as an agent, REALTORS® pledge themselves to protect and promote the interests of their client. This obligation to the client is primary, but it does not relieve REALTORS® of their obligation to treat all parties honestly. When serving a buyer, seller, landlord, tenant or other party in a non-agency capacity, REALTORS® remain obligated to treat all parties honestly”.

GAC Advice, Restricted Access: As an exception to the general rule that the gTLD domain name space is operated in an open manner registration may be restricted, in particular for strings mentioned under Category 1. In these cases, the registration restrictions should be appropriate for the types of risks associated with the TLD. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage.

Our Response: We agree. As an exception to the general rule, and as stated in response to Question 18, “Consistent with NAR’s mission/purpose for the .REALTOR gTLD, NAR will determine, in its sole discretion, who may register domains in .REALTOR, and only NAR, REALTORS®, NAR members, NAR affiliates (including affiliated institutes, societies and councils), NAR licensees and parties otherwise in a contractual relationship with NAR relating to use of the REALTOR® mark will be permitted such registration.” NAR’s knowledge of the real estate business and the ethical and legal conduct of that business makes NAR the most

GAC Advice Response Form for Applicants

suitable entity with both the experience and the expertise to determine the registration restrictions that should be appropriate for the types of risks associated with the .REALTOR TLD.

We further agree the registry operator should administer access to .REALTOR in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage. For example, NAR maintains non-discriminatory standards for membership such that any authorized real estate practitioner willing to commit to the enhanced standards of ethical conduct required of a REALTOR® will be eligible for membership in NAR thus eligible for registration of a .REALTOR domain name.

GAC Advice, Exclusive Access: For strings representing generic terms, exclusive registry access should serve a public interest goal.

Our Response: Our application for .REALTOR, on behalf of the National Association of REALTORS® (NAR), does not represent a generic term. REALTOR® is a registered collective membership mark of NAR that identifies a real estate professional who is a member of the NAR and abides by its strict Code of Ethics. NAR's intellectual property rights for the term REALTOR® are recognized by the USPTO, an additional 45 nations and the European Community. While in this context REALTOR® is not a generic term, extending NAR's longstanding position as the acknowledged leader in developing standards for efficient, effective, and ethical real estate business practices on behalf of REALTORS® to .REALTOR serves a public interest goal.

The GAC's Six safeguards for all new gTLDs:

GAC Advice, WHOIS verification and checks: Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate, or incomplete WHOIS data at least twice per year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the

GAC Advice Response Form for Applicants

registrar's obligation to solicit accurate and complete information from the registrant.

Our Response: We agree.

GAC Advice, Mitigating abusive activity: Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. As stated in response to Question 28: "Abuse" or "abusive use" of a .REALTOR domain name by a REALTOR® or any affiliate or other member of the National Association of Realtors (NAR) also includes violation or breach of the membership duties owed by a member and a violation of a material provision of the agreement with NAR relating to use of a domain in .REALTOR.

GAC Advice, Security checks: While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Our Response: We agree. Additionally, we note numerous products and services are being introduced to the market place to help fulfill this need such as NameSentry (<http://architelos.com/services/namesentry/>).

We confirm the registry will suspend .REALTOR domain names found to perpetrate security threats if registrars won't. We note the licensing credentials required to achieve registration in .REALTOR, notably membership status with NAR, will serve as a built-in safeguard to those motivated to gain entry in order to perpetrate security threats.

GAC Advice Response Form for Applicants

GAC Advice, Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Our Response: We agree.

GAC Advice, Mitigating and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. As we state in response to Question 28: “If you believe that a .REALTOR domain name is or has been involved in abusive conduct, please contact our Abuse Prevention Manager at <email address> or <written address> with your complaint.” A similar complaint mechanism can be established for making complaints to the registry operator about inaccurate WHOIS information and/or domains being used for malicious activity or perpetuating security risks as the case may be.

GAC Advice, Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these conditions should include suspension of the domain name.

Our Response: We agree. Providing false information and/or using a .REALTOR domain name in breach of applicable law would produce consequences, such as the suspension of the domain name.

GAC Advice Response Form for Applicants

ICANN may also use this response in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

GAC Advice Response Form for Applicants

The Government Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	dotCareer LLC
Applicant ID	1-907-61259
Applied for TLD (string)	.CAREER

Response:

On behalf of dotCareer LLC, the new gTLD applicant for .CAREER (Applicant Number 1-907-61259), we are pleased to provide our response to the GAC advice received by the ICANN Board specific to the “six safeguards that should apply to all new gTLD’s”:

GAC Advice, WHOIS verification and checks: Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate, or incomplete WHOIS data at least twice per year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Our Response: We agree in principle.

GAC Advice, Mitigating abusive activity: Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright

GAC Advice Response Form for Applicants

infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree.

GAC Advice, Security checks: While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Our Response: We agree in principle.

GAC Advice, Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Our Response: We agree in principle.

GAC Advice, Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree.

GAC Advice, Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and

GAC Advice Response Form for Applicants

violations of the requirement that the domain name should not be used in breach of applicable law; these conditions should include suspension of the domain name.

Our Response: We agree.

ICANN may also use this response in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

Respondent:

Applicant Name	Dot Beauty LLC
Applicant ID	1-907-62211
Applied for TLD (string)	.CASINO

Response:

GAC Communiqué –Beijing, People’s Republic of China

- Under Annex 1, Category 1, the GAC advises 5 safeguards to apply to particular categories of new gTLD’s.
- The GAC labels “Gambling” as one such category.
- The GAC has named the string .CASINO within the Gambling category.

On behalf of Dot Beauty LLC, the new gTLD applicant for .CASINO (Applicant Number 1-907-62211), we are pleased to provide our response to the GAC advice received by the ICANN Board. Please find below the advice excerpts from the GAC with our response immediately following:

GAC Advice: Strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm.

Our Response: We agree with this GAC advice in principle. The gaming industry is regulated. Applicable jurisdictional laws exist specific to casino operations and gaming. There is a level of implied trust from consumers when a government

GAC Advice Response Form for Applicants

licensing environment is involved. Governments create Gaming Control Boards for the very reason of higher levels of risk associated with consumer harm.

We interpret this GAC advice to mean “casino” is not merely a generic term at the top level of the DNS hierarchy. Registration of a domain name at the second level in combination with .CASINO at the top level is what creates and sets forth a specific identity of the registrant to the public at large. Such an identity, when used in the context of gambling, has the effect of “casino” not being a generic term, but one a consumer presumes exists upon condition. Conditions are what imply a level of trust. Consistent with applicable laws, a business entity is not permitted to portray an identity to the public as a casino for gaming and wagering absent conditions placed upon it by a governmental licensing authority, such as a Gaming Commission.

The fact such conditions exist for casino operators is widely understood by the public at large and by the millions of consumers of casino products and services throughout the world. Such knowledge is what sets expectations for the implied level of trust consumers have in gaming operations today. Those that wish to benefit by being identified as a gaming operator accept these conditions. Domain name registrations in .CASINO produce such an identity. Consumers will naturally assume an identity in .CASINO means the entity posturing itself as a gaming operator has obtained proper governmental licensing credentials to offer gaming products and services. This assumption should be valid at all times.

In applying to ICANN for .CASINO, the Registry Operator faces the choice of either educating the global public at large that no such conditions exist for the registration of a .CASINO domain name (buyer beware) or taking on the responsibility of installing conditions into the registration process which serve to preserve consumer expectations and implied trust. A Registry Operator proposing to do neither for .CASINO is one that is willing to allow erosion of the public trust in the new gTLD program and the DNS in general which, in the case of .CASINO, increases the likelihood of consumer harm as a result. We believe this rationale captures the essence for the GAC specifically citing .CASINO with its Beijing advice to the ICANN Board, and we agree.

GAC Advice Response Form for Applicants

As stated in our application to operate .CASINO and reinforced in our PIC specifications, all registrants of a .CASINO domain name MUST show “evidence, such as from a Gaming Commission, Gaming Control Board, or similarly-situated regulator, prior to registration, that the registrant is a governmentally licensed gaming operator in good standing”. This is coupled with a separate PIC specification which states “Real-time registration of .CASINO domain names will not be permitted”. Communications we have had with representatives of the GAC, such as in response to the Early Warning, has indicated this approach to registry operations of .CASINO allay their concerns.

GAC Advice: Registry acceptable use policy must require registrants to comply with all applicable laws including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

Our Response: We agree in principle. Registry acceptable use policy will require registrants to comply with all applicable laws. Additionally, we note that governmental licensing requirements for gaming naturally require compliance with all applicable laws, as provided for in this advice, generally including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct). Further, as we state in response to Question 28: One of those public interest functions for a responsible domain name registry includes working towards the eradication of abusive domain name registrations, including, but not limited to, those resulting from:

- * illegal or fraudulent actions
- * spam
- * phishing
- * pharming
- * distribution of malware
- * fast flux hosting
- * botnets
- * distribution of child pornography
- * online sale or distribution of illegal pharmaceuticals"

GAC Advice Response Form for Applicants

GAC Advice: Registry operators will require registrars at the time of registration to notify registrants of the acceptable use policy.

Our Response: We agree. Registrars accredited in .CASINO will be required in the registry/registrar agreement to notify registrants of the .CASINO acceptable use policy at the time of registration.

GAC Advice: Registry Operators will require registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Our Response: We agree in principle. Registry acceptable use policy will require registrants to comply with all applicable laws, as stated above, and all applicable recognized industry standards. Further, all registrants of .CASINO domain names must be a governmentally-licensed gaming operator in good standing thereby inherently responsible to implement reasonable and appropriate security measures commensurate with the offering of those services to the public as such governmental licensing status may require.

GAC Advice: Establish a working relationship with the relevant regulatory, or industry self-regulatory, body including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.

Our Response: We agree. The inherent nature of how we have proposed to operate .CASINO is a strategy that will produce working relationships with the appropriate regulatory body, such as the applicable Gaming Commission or Gaming Control Board, since such licensing is required as evidence from the registrant prior to registration.

GAC Advice: Registrants must be required by the registry operator to provide a single point-of-contact for the notification of complaints or reports of registration abuse as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Our Response: We agree.

GAC Advice: “In addition, some of the above strings may require further targeted safeguards, to address specific risks, and to bring registry policies in line with arrangements in place offline. In particular, a limited subset of the above strings are associated with market sectors which have clear and/or regulated entry requirements (such as: financial, gambling, professional services, environmental, health and fitness, corporate identifiers, and charity) in multiple jurisdictions, and the additional safeguards below should apply to some of the strings in those sectors”.

Our response: As we state above, in order to establish an identity in .CASINO a government approved gaming license is an entry requirement to registration in .CASINO. This condition mirrors the practice shared by governments throughout the world, therefore in line with arrangements in place offline, that a gaming license is required in order to gain market entry to gaming operations to the public. It is this established practice in the offline world we are incorporating into registry operations of .CASINO. Specifically, our registry policy and contractual obligation, requires all registrants of a .CASINO domain name to provide “evidence of a gaming license from a Gaming Commission, Gaming Control Board, or similarly-situated regulator, prior to registration” in order to gain market entry on the Internet with a .CASINO identity. Operationally speaking, “real time registration of .CASINO domain names will not be permitted” so that evidence of a gaming license can be verified by the registry prior to accepting registration.

While admittedly a highly restrictive approach to registration, perfectly permissible by the rules of the Guidebook, translating established practices from the offline world to the registration process of domain names where possible and practical offers separation and innovation for the Registry Operator. While not specifically cited by the GAC as rationale in its Beijing Communique, the GAC has stated innovation by registry operators is a public interest goal of gTLD expansion to be later evaluated. Where the GAC has cited specific strings for the need of additional safeguards, such as the case for .CASINO, offers the ICANN Board and community the opportunity to consider those applicants that have proposed innovative solutions to potential public policy concerns.

GAC Advice Response Form for Applicants

GAC Advice: At the time of registration the registry operator must verify and validate the registrants' authorizations, charters, licenses and/or other credentials for participation.

Our Response: We agree. As provided for in our PIC Specification 3: "Evidence, such as from a Gaming Commission, Gaming Control Board or similarly-situated regulator, prior to registration, that the registrant is a governmentally-licensed gaming operator in good standing, will be required for all registrations." Registry operators which rely upon registrant self-certification at the time of registration, and/or post-verification of proper registrant authorizations, are not consistent with this GAC advice for .CASINO.

GAC Advice: In case of doubt with regard to authenticity of licenses or credentials, registry operator should consult with relevant national supervisory authorities, or other equivalents.

Our Response: We agree. Operationally, the very purpose of not allowing real-time registration in .CASINO is to investigate, particularly in the case of doubt, the authenticity of a gaming license. We would, as the registry operator, naturally consult with the appropriate Gaming Commission or Gaming Control Board as the case may be, for the purpose of validating credentials in order to remove any doubt prior to permitting registration.

GAC Advice: Registry operator must conduct periodic, post-registration checks with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Our Response: We agree. Periodic, post-registration checks of good standing with the appropriate governmental gaming authority (i.e. licensing issuing body) must be conducted. Our approach is that a gaming license in good standing means the designated governmental authority finds the licensed operator (and .CASINO registrant) conducting its activities in the interests of the consumers for which such licensing rights and privileges permit. This serves as a natural safeguard and a fundamental reason why we believe verifying evidence of licensing credentials is critical specific to the .CASINO gTLD as we have proposed.

GAC Advice, Restricted Access: As an exception to the general rule that the gTLD domain name space is operated in an open manner registration may be restricted, in particular for strings mentioned under Category 1. In these cases, the registration restrictions should be appropriate for the types of risks associated with the TLD. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage.

Our Response: We agree. The GAC has named the string .CASINO under Category 1, thus applicable to this advice. We interpret “restricted access” to mean restricted access to registration (different than a self-certification and/or post-verification model i.e. after the registry has allowed the registration). Our application for .CASINO provides for registration restrictions, prior to registration, appropriate for the types of risks associated as a condition of registration. This is to say the intent of our registration restrictions for .CASINO capture, by design, the intent of this GAC advice.

As the Registry Operator for .CASINO, we confirm our intent to administer access in .CASINO “in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars to an undue disadvantage.” For example, the condition of providing evidence of a gaming license from a governmental authority in order to gain entry (registration) in .CASINO is a transparent way that does not give undue preference except to those able to meet this standard (thus the exception).

GAC Advice, Exclusive Access: For strings representing generic terms, exclusive registry access should serve a public interest goal.

Our Response: We agree while also noting that our application for .CASINO does not propose exclusive registry access (but does propose restricted access as explained above). Registration in .CASINO, later used to promote gaming activities, signals to consumers licensing conditions have been met. This causes an identity in .CASINO to be descriptive.

GAC Advice Response Form for Applicants

The GAC's Six safeguards for all new gTLDs:

GAC Advice, WHOIS verification and checks: Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate, or incomplete WHOIS data at least twice per year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

Our Response: We agree.

GAC Advice, Mitigating abusive activity: Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. We also note that abusive behavior will be naturally mitigated by the requirement that all .CASINO registrants must provide evidence of being a governmentally-licensed gaming operator in good standing. All registrants in .CASINO will share the motivation of not wanting to place their governmental gaming license at risk by improper behavior in .CASINO. This is a built-in safeguard for mitigating abusive behavior in .CASINO further minimizing or eliminating social costs as compared to operators proposing unrestricted access.

GAC Advice, Security checks: While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

GAC Advice Response Form for Applicants

Our Response: We agree. As we state in response to Question 30: “Regular security audits by an accredited independent third party are commissioned to formally test & evaluate vulnerabilities & controls within the operations environment. Biannual internal security reviews are performed. The reviews emulate the evaluation performed in a security audit, but also provide detailed reviews of processes, procedures, & systems performance metrics.”

We confirm the registry will suspend .CASINO domain names found to perpetrate security threats if registrars won’t. We note the licensing credentials required to achieve registration in .CASINO will serve as a built-in safeguard to those motivated to gain entry in order to perpetrate security threats.

GAC Advice, Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Our Response: We agree. We note from our response to 26: We will offer searchability on the web-based Directory Service. We will offer partial match capabilities on the following fields: domain name, contacts and registrant’s name, and contact and registrant’s full postal address. We will offer exact match capabilities on the following fields: registrar ID, nameserver name, and nameserver’s IP address for in-zone hosts (glue records). Compiling statistical reports of this data for purposes of measuring accuracy can be maintained and provided to ICANN upon request.

Similarly, in response to Question 30, Security: The documentation that results from internal reviews & external [security] audits are securely archived, & these records can be made available for third parties with management approval.

GAC Advice, Mitigating and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing,

GAC Advice Response Form for Applicants

piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Our Response: We agree. We state in PIC Specification #5: “Registry Operator will provide a single point of contact responsible for addressing reports of registration abuse and to constructively work with law enforcement to address reported cases of registration abuse”. Such a complaint mechanism can be created specifically for inaccurate WHOIS information in a manner consistent with this GAC Advice.

GAC Advice, Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these conditions should include suspension of the domain name.

Our Response: We agree. Providing false information and/or using a .CASINO domain name in breach of applicable law would result at minimum the suspension of the domain name. We note the verification procedures as we have proposed along with the requirement of evidence of being a gaming operator in good standing by license from a governmental authority serve as natural safeguards to false and/or illegal activity occurring in .CASINO.

All responses provided above may be used by ICANN in any final summary, analysis, reporting, or decision-making that takes place as part of its public comment process originated by the New gTLD Board Committee located at <http://www.icann.org/en/news/public-comment/gac-safeguard-advice-23apr13-en.htm>

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the GAC Beijing Communiqué for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your CSC Portal with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DERHomes, LLC
Application ID	1-909-196
Applied for TLD (string)	.homes

Response:

Dominion Enterprises takes this opportunity to affirm to the ICANN Board our commitment to operating the .homes gTLD in a manner that serves both the public and Dominion’s interests—consistent with our longstanding history of corporate responsibility.

Dominion is a leading marketing services company serving the wide-ranging needs of many industries including real estate, apartments, specialty vehicles, employment, automotive and travel. Through its technology, web solutions, and tools, spanning website design and hosting, data management and distribution, lead generation, search engine optimization, digital marketing and advertising, consumer relationship management, ecommerce, and email marketing, Dominion has become an industry leader in bringing critical services to customers in a safe and trusted online environment.

The .homes gTLD will be launched by Dominion in a staged fashion with second level domains being offered initially to only Dominion online properties and/or current Dominion business partners. By initially dealing only with Dominion businesses and business partners, Dominion expects to be able to absolutely establish a clean and reliable environment for use of .homes domain names. Dominion anticipates subsequently evaluating creation of a validation process to allow non-Dominion business and business partners to register domain names in the .homes gTLD for potential use to display appropriate, safe, and industry specific sites. The staged and cautious rollout of .homes second-level domains will ensure that all operations within the gTLD will be conducted in accordance with Dominion’s overarching dedication to our customers and our commitment to ethical business practices, as well as adherence to a strict code of conduct that includes prohibitions against:

- Counterfeiting, piracy, and other forms of intellectual property theft,
- Phishing or other forms of online fraud,

GAC Advice Response Form for Applicants

- The distribution of malware or operation of botnets, and
- The provision of incomplete or inaccurate WHOIS information.

Dominion's proposed operation of the .homes gTLD will allow for creation of a safe online space for consumers and businesses, free from many of the risks currently associated with conducting business online.

The Governmental Advisory Committee's Beijing Communiqué recommends that in cases where a restricted registration policy is implemented "the registration restrictions should be appropriate for the types of risks associated with the gTLD." We are hopeful that the above clarifies the registration policies that Dominion will implement for the .homes gTLD. We invite further dialogue with the Board if it has any remaining concerns regarding Dominion's .homes application.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the GAC Beijing Communiqué for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondent:

Applicant Name	DERRent, LLC
Application ID	1-909-9048
Applied for TLD (string)	.rent

Response:

Dominion Enterprises takes this opportunity to affirm to the ICANN Board our commitment to operating the .rent gTLD in a manner that serves both the public and Dominion’s interests—consistent with our longstanding history of corporate responsibility.

Dominion is a leading marketing services company serving the wide-ranging needs of many industries including real estate, apartments, specialty vehicles, employment, automotive and travel. Through its technology, web solutions, and tools, spanning website design and hosting, data management and distribution, lead generation, search engine optimization, digital marketing and advertising, consumer relationship management, ecommerce, and email marketing, Dominion has become an industry leader in bringing critical services to customers in a safe and trusted online environment.

The .rent gTLD will be launched by Dominion in a staged fashion with second level domains being offered initially to only Dominion online properties and/or current Dominion business partners. By initially dealing only with Dominion businesses and business partners, Dominion expects to be able to absolutely establish a clean and reliable environment for use of .rent domain names. Dominion anticipates subsequently evaluating creation of a validation process to allow non-Dominion business and business partners to register domain names in the .rent gTLD for potential use to display appropriate, safe, and industry specific sites. The staged and cautious rollout of .rent second-level domains will ensure that all operations within the gTLD will be conducted in accordance with Dominion’s overarching dedication to our customers and our commitment to ethical business practices, as well as adherence to a strict code of conduct that includes prohibitions against:

- Counterfeiting, piracy, and other forms of intellectual property theft,
- Phishing or other forms of online fraud,

GAC Advice Response Form for Applicants

- The distribution of malware or operation of botnets, and
- The provision of incomplete or inaccurate WHOIS information.

Dominion's proposed operation of the .rent gTLD will allow for creation of a safe online space for consumers and businesses, free from many of the risks currently associated with conducting business online.

The Governmental Advisory Committee's Beijing Communiqué recommends that in cases where a restricted registration policy is implemented "the registration restrictions should be appropriate for the types of risks associated with the gTLD." We are hopeful that the above clarifies the registration policies that Dominion will implement for the .rent gTLD. We invite further dialogue with the Board if it has any remaining concerns regarding Dominion's .rent application.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the GAC Beijing Communique for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your CSC Portal with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Respondent:

Applicant Name	DERCars, LLC
Application ID	1-909-45636
Applied for TLD (string)	.cars

Response:

Dominion Enterprises takes this opportunity to affirm to the ICANN Board our commitment to operating the .cars gTLD in a manner that serves both the public and Dominion’s interests—consistent with our longstanding history of corporate responsibility.

Dominion is a leading marketing services company serving the wide-ranging needs of many industries including real estate, apartments, specialty vehicles, employment, automotive and travel. Through its technology, web solutions, and tools, spanning website design and hosting, data management and distribution, lead generation, search engine optimization, digital marketing and advertising, consumer relationship management, ecommerce, and email marketing, Dominion has become an industry leader in bringing critical services to customers in a safe and trusted online environment.

The .cars gTLD will be launched by Dominion in a staged fashion with second level domains being offered initially to only those members of the car dealer community with whom Dominion has a business relationship. By initially dealing only with dealers who are known to be bona fide car dealers, Dominion expects to be able to absolutely establish a clean and reliable environment for use of .cars domain names. Dominion anticipates next offering .cars domain names to all car dealers based on objective registration standards, such as state licensure, to ensure that bad actors are not awarded .cars domain names. The next and subsequent stages for release of .cars domain names will involve methodically adding additional categories of industry players based upon objective registration qualification standards intended to maintain the quality of all .cars sites that will be encountered by consumers on the Internet.

The staged and cautious rollout of .cars second-level domains will ensure that all operations within the gTLD will be conducted in accordance with Dominion’s overarching dedication to our customers and our commitment to ethical business practices, as well as adherence to a strict code of conduct that includes prohibitions against:

GAC Advice Response Form for Applicants

- Counterfeiting, piracy, and other forms of intellectual property theft,

Respondent:

Applicant Name	FLSmith A/S
Application ID	1-911-22365
Applied for TLD (string)	fls

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

Respondent:

Applicant Name	Big Room Inc.
Application ID	1-912-59314
Applied for TLD (string)	eco

Response:

Dear ICANN,

Big Room Inc. and the Dot Eco Global Community Organization welcome the opportunity to respond to the Advice contained in the 11 April 2013 ICANN Governmental Advisory Committee (GAC) Communiqué.

The specific recognition by the GAC of the importance of “the clear and collective opinion of a community on a gTLD where the community is impacted by that gTLD application” is an important and timely contribution to the new gTLD process given the approaching community-priority evaluations.

The GAC has also recommended that ICANN establish additional safeguards for all new gTLDs; specific safeguards for strings that are linked to regulated or professional sectors; and further targeted safeguards for strings associated with market sectors that have clear and/or regulated entry requirements.

The GAC specifically advised that ICANN ensure that registries of environment-related gTLDs – including .eco – require registrants to agree to compliance with applicable laws, to undertake validation, and to agree to periodic checks that ensure validity of relevant authorisations, charters, licenses and/or other related credentials for participation in the sector. We strongly agree with and support this advice.

Big Room’s community-priority application for .eco is unique amongst all environment-related strings in its recognition of these important consumer protection mechanisms and engagement with the affected community.

This commitment to maximizing community benefit from the .eco domain and minimizing harm is reflected in the .Eco Consensus, a charter for the .eco domain negotiated with leading members of the environmental community.

As evidenced by our approach to date, we firmly believe that the Internet user more likely to be harmed by environment-related gTLD registries that do not require compliance with applicable laws and validation of environmental credentials, than by registries that do.

The “Regeneration Consumer Study ” is an online survey of consumer attitudes, motivations and behaviours around sustainable consumption among 6,224 respondents in six major international markets (Brazil, China, Germany, India, United Kingdom and United States). It was developed by BBMG, GlobeScan and SustainAbility and fielded during September and October 2012.

The study found that “consumers across all six markets look to certification seals or labels on product packaging (40%) as the most trusted source of information about whether a product is environmentally and socially responsible.” This suggests that the average consumer finds external verification of environmental claims helpful.

The study also found that the least trusted source of information was traditional company communications. According to the study, “barely one in ten consumers rely on company advertisements or website content, reinforcing the perception that the most reliable claims often come from sources largely beyond a company’s control.” This suggests that the average consumer finds environmental claims that are not externally verified unhelpful.

This understanding that externally verified environmental claims are helpful while unverified environmental claims are unhelpful is a key basis for many government consumer protection policies on environmental claims.

To explore whether this extends to environment-related gTLDs, in February 2012 Vision Critical, on behalf of Big Room Inc., conducted a survey to understand public expectations of the term eco and of the .eco gTLD in particular. The results suggest that it does, with 58% of respondents indicating they would expect domain names ending in .eco (e.g. www.anyname.eco) to be members of an environmental organization, professional association or have made a specific commitment to the environment.

This is also a key reason why the environmental community has expressed a consensus view that the .eco gTLD should be ‘community-designated’. Indeed, as Big Room Inc.’s .eco application explains:

“The purpose and principles outlined in the .ECO Policy Consensus define what .ECO will mean as an active expression of the goals, values and interests of the Community. All major international membership organizations (e.g. IUCN, WWF, Greenpeace), the largest global business and environment organizations (e.g. World Business Council for Sustainable Development, Green Economy Coalition), the largest international Community alliances (e.g. 350.org, TckTckTck) and the key global environmental reporting standards (e.g. Global Reporting Initiative, Carbon Disclosure Project) support the creation of .ECO as a Community TLD. The United Nations Environment Programme (UNEP) has been an observer to the .ECO community

GAC Advice Response Form for Applicants

process since 2010. These institutions represent over 190 countries, 1,000 entities, and more than 10 million individual members.”

This and other supporting evidence, in combination with community and governmental support, suggests that a safeguard-oriented approach to environment-related gTLDs is appropriate. The question then becomes how to implement it.

First, a mandatory “Additional Safeguards Specification” for affected gTLDs within the Registry Agreement that is based on these principles would be useful.

Second, guidance on how best to harmonise linkages between the PIC Specification, Section 2.19 & Specification 12 (for community-based gTLDs) and any new Additional Safeguards Specification in the Registry Agreement would also be helpful.

Big Room Inc. .Eco Application Compliance with GAC Proposed Safeguards

Big Room Inc., as .eco gTLD applicant on behalf of the environmental community, has translated the .Eco Policy Consensus – an environmental community charter for .eco – into a framework established by ICANN for the governance of community-based gTLDs.

This Consensus is the result of an independently mediated multi-stakeholder process that reflects public policy designed to protect Internet users and is representative of community interests and goals vis-à-vis the .eco gTLD.

Should Big Room Inc. be in a position to act as registry for the .eco gTLD on a community basis, we intend to comply with all recommended GAC safeguards in line with community expectations as explained in the .Eco Consensus.

Indeed, most if not all of these safeguards pre-exist in our responses to questions 18 & 20. We have also affirmed our intention to implement them by submitting a PIC Specification that covers our responses to these responses. We note that we were one of the only new gTLD applicants to take this step.

We look forward to ICANN guidance on how to integrate them into our application and/or registry agreement for the .eco gTLD, or through other mechanisms agreed by the community.

Sincerely,

Jacob Malthouse
Co-founder & Director, Big Room Inc.

The Regeneration Consumer Study is an online survey of consumer attitudes, motivations and behaviours around sustainable consumption among 6,224 respondents in six major international markets (Brazil, China, Germany, India, United Kingdom and United States). Fielded in September and October 2012, the study represents a holistic exploration of sustainability market trends, priorities and engagement pathways, including information on sustainable consumption, trust, transparency, social issues, behaviour change, consumer collaboration, participation and advocacy actions. Data across all six international markets reflect a margin of error of +/- 1.3 percent. Specific country-level data reflect a margin of error of +/- 3.1 percent.

The Big Room .eco survey is a random online omnibus survey of 1,016 US adults from diverse ages, incomes, ethnicities and regions, conducted 15-16 February 2012 among a sample of Americans who are also Springboard America panel members. The margin of error, which measures sampling variability, is +/-3.10%, 19 times out of 20. The sample was balanced by age, gender and region according to the most recent American Community Survey (2009).

See Big Room Inc. .eco gTLD application (1-912-59314) public response to question 20 (d) for an indicative list of applicable national and international policy on environmental consumer protection legislation.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Fresenius Immobilien-Verwaltungs-GmbH
Application ID	1-916-50890
Applied for TLD (string)	fresenius

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

Respondent:

Applicant Name	PRIMER NIVEL S.A.
Application ID	1-917-1259
Applied for TLD (string)	.BLOG

Response:

Dear members of the Board,

The following comments refer to the document submitted by (GAC) to the ICANN Board dated 11 April 2013. This advice may be considered to affect our application for the tld .BLOG.

First of all, we would like to state that the document produced by the GAC, and that has been considered as the GAC Advice of the new gTLD program, is not clear. Questions arise about the actual matters that the GAC wants treated as GAC advice as per Module 3.1 of the applicant guidebook, and the actual possibility of considering those matters as GAC Advice. We do not consider that sections b, f and g of the document submitted by the GAC can constitute GAC advice. Having said that, we would like to comment specifically on the "Safeguard Advice for New gTLDs" included in the document delivered by the GAC.

The Safeguard Advice is a policy initiative that is not consistent with the GAC Advice as stated in module 1.1.2.7 of the Applicant Guidebook. This initiative does not respect the proper Policy Development Process, fundamental to the whole organization. Furthermore, we think that the advices could represent major changes to rules and structure of the actual new gTLD program. These changes would be devastating for the actual program and would challenge the rules and principles over which the new gTLD projects have been constructed.

The document submitted by the GAC should not change the actual new gTLD program as the GAC Advice was never created for that purpose. If the board considers that there are reasons to kickstart a community process, this should be treated as an independent matter from the actual new gTLD program, applicable to later rounds.

We will respect, and if necessary, act upon any decision made by the Board regarding the document.

Respondent:

Applicant Name	Top Level Domain Holdings Limited
Application ID	1-927-4468
Applied for TLD (string)	.lawyer

Response:

Top Level Domain Holdings Limited (TLDH) submitted public interest commitments (PICs) prior to the GAC Beijing Communiqué which address the GAC's concerns regarding abusive activity.

We will have a single point of contact, as discussed in our PICs, as well as community policing and an ombudsperson. There will be a single point of contact for allegations of abuse to be submitted to, making it easy for the community and for law enforcement to have their concerns quickly addressed.

Finally, since .lawyer is a string that refers to a regulated industry, we will work with governing and/or regulatory bodies to ensure appropriate identification is presented with registration. We will require that a potential registrant enter their unique bar number as well as indicate the jurisdiction to which the number relates.

Respondent:

Applicant Name	DotWeb Inc.
Application ID	1-956-26846
Applied for TLD (string)	Web

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	.Music LLC
Application ID	1-959-51046
Applied for TLD (string)	.Music

Response:

Executive Summary

As a Community applicant for .music, we are confident that we have addressed all of the GAC's concerns in both policy and implementation. By virtue of our decision to file under a "Community" designation and gain the broad support of the music community, we have already committed to enhanced safeguards as part of the contractual oversight of .music. The ICANN board can be assured that our application for .music is fully compliant with not only the Applicant Guidebook, but also the new requirements of the GAC.

The GAC Communiqué that was issued on April 11th 2013 (hereafter the "GAC Advice"), included four (4) areas which are relevant to our .music application. The GAC:

Area 1- Outlined six safeguards that should apply to ALL new gTLDs and be subject to contractual oversight.

Area 2- Advised that strings such as .music "invoke a level of implied trust from consumers and carry higher level of risk associated with consumer harm", and therefore should be subject to five (5) additional safeguards, with a further three (3) safeguards possibly applying.

Area 3- (1) Created guidelines for TLDs with restrictive access (our .music application is one), and (2) declared that .music was a generic term, and advised that exclusive access, if implemented, should serve a public interest goal.

Area 4 -Advised the ICANN board that in "those cases where a community, which is clearly impacted by a new set of gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinions should be duly taken into account, together with all other relevant information.

It is clear that the GAC is looking for more than statements of intent or policy, rather it is looking to ensure all applicants, with particular emphasis on some, have not only adequately planned for the implementation of safeguards against abusive use, but are also contractually held to

GAC Advice Response Form for Applicants

account for compliance. To underline this point, and ensure a thorough response, this document will address each of the four areas in detail below.

By way of introduction, .Music LLC., a Far Further company, as a careful, committed and diligent Community applicant for .music, is confident that we have proactively addressed all of the GAC's concerns in both policy and implementation in our original application. By virtue of our decision to file under a "Community" designation, we are already subject to tighter contractual oversight of .music. The ICANN board should be assured that our application for .music is fully compliant with not only the Applicant Guidebook, but also the Advice contained in the GAC's Beijing Communique. Our application for .music is a natural extension of our desire to serve all members of the music community through a trusted namespace that respects creative and Intellectual Property rights. We have invested over six years and substantial resources pursuing this vision and building an unprecedented level of global music community support, which encompasses millions of individual members within more than 1,000 associations in over 150 countries. We respectfully submit that the ICANN Board can have confidence in the strength and thoroughness of our application and resist any calls to delay the program or its progress.

Despite the fact that the .Music LLC. application meets the GAC criteria that are associated with the .music string, we recognize that the GAC document must be discussed in the community before it can be implemented but we hope that the new gTLD process will move forward as planned and not be delayed. We therefore urge the board to withstand requests for any further changes, and or delays.

Area 1: Six safeguards that apply to all new gTLDs

In Annex I, page 7 of the GAC Advice, the GAC identifies six (6) safeguards for for all new gTLD applicants. Each of these is described below, accompanied by our explanation for meeting or exceeding each:

1- Whois verification and checks. We fully meet/exceed this requirement. We have detailed in our response to Q28.4 additional measures we will take on our own initiative to promote Whois accuracy. These measures are exactly what the GAC has requested under this requirement.

2- Mitigating Abuse Activity: We fully meet/exceed this requirement. We define as "abuse" the use of domain names for any of the following activities:

- Spam
- Phishing
- Pharming
- Distribution of malware
- Fast flux hosting
- Botnets
- Distribution of child pornography
- Online sale or distribution of illegal pharmaceuticals.
- Intellectual Property Violation
- Copyright Violation

We have already gone one step further than most applicants, and planned for the implementation of a service that will help detect abusive activity in near real-time, and mitigate it in a consistent and automated manner. We are one of the first adopters of Architelos'

GAC Advice Response Form for Applicants

NameSentry Abuse Detection and Mitigation service (www.architelos.com/namesentry). This service, provided by a neutral 3rd party, was specifically designed for the abuse policies and procedures of Far Further's .Music LLC.

3- Security Checks. We fully meet/exceed this requirement. While the GAC's advice here is that registries "periodically" conduct an analysis to see if their domains are being used for abusive purposes, our use of NameSentry ensures that we are ALWAYS scanning our .music TLD to detect any abusive activity within near real-time. The NameSentry service will also automatically match up the abusive domain with the sponsoring registrar and send out a notification asking for resolution of the matter within 12 hours. Since NameSentry will be integrated with our Trouble Ticketing system, a queue will be created for each such instance. If within 12 hours the registrar has not resolved the issue, per our policy we will place the domain on "serverhold". A complete record of every instance will therefore be kept both in our Trouble Ticketing system as well as in NameSentry.

4- Documentation: We fully meet/exceed this requirement. We will perform an audit of a statistical sample of the whois record on an at least twice yearly basis. In addition, our use of NameSentry ensures the availability of an audit trail for every instance of a security threat (due to abuse domain registrations) and our actions. This level of documentation and transparency is unprecedented in current gTLDs, but we believe it demonstrates our commitment to serving our community.

5- Making and handling Complaints: We fully meet/exceed this requirement. As we stated above and in our answer to the Applicant Guidebook Q 28.4 we provide a mechanism for 3rd party complaints about inaccurate Whois. We also will have and publish on our website a single point of contact for complaints related to abuse or illegal use. Lastly, will oversee Registrant Accreditation Criteria and help evaluate enforcement mechanisms, including appeal procedures to ensure the protection of intellectual property rights in the .music TLD.

6- Consequences: We fully meet/exceed this requirement. Our answers to the Applicant Guidebook Q.28 are very clear with regards to consequences for validated breach of the Acceptable Use Policy, providing inaccurate or false Whois data, and other illegal activity. In each of these cases, the sponsoring registrar and its reseller is given 12 hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar (reseller) has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "serverHold".

GAC Area I: Five additional safeguards for TLDs with implied levels of consumer trust

In Annex I, Category 1, of the GAC Advice, the GAC identifies five (5) additional safeguards for a new category of strings including .music. These require:

- 1- That registry operators include in their Acceptable Use Policy the requirement that registrants comply with all applicable laws.
- 2- That registrants be notified at the time of registration of the above requirement.

GAC Advice Response Form for Applicants

3- That Registry operators will require that registrants who collect and maintain sensitive health and financial data to implement appropriate security measures, as defined by applicable laws and industry standards.

4- That registries establish a working relationship with appropriate regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate risk of fraudulent and illegal activities.

5- That Registry operators require registrants to provide and maintain an up-to-date single point of contact for notifications of complaints or abuse, and for registry operators to maintain in their place of business, the contact details for appropriate regulatory or self-regulating bodies.

The first two requirements are fully met. Far Further's .Music LLC. application specifies that "eligible registrants may register domains in compliance with the Registrant Agreement and its Acceptable Use Policy." In our answer to the Applicant Guidebook's Q.20.e.3, we clearly state that the Registrant Agreement is "presented during the registration process, this agreement will require registrant compliance with the dotMusic Registry rules and Acceptable Use Policy." Our Acceptable Use Policy is reproduced in its entirety in our answer to Q. 28.2 and clearly delineates the types of activities that constitute "abuse" and the repercussions associated with an abusive domain name registration. We also state that this policy is to be incorporated into the Registry-Registrar Agreement, whereby each ICANN-Accredited Registrar must agree to pass through the Acceptable Use Policy to its Resellers (if applicable) and ultimately to the TLD registrants. (Please refer to a copy of our answer attached)

The third requirement is not applicable to .music. The nature of the .music string is different from financial services or health related strings. Our eligibility criteria helps ensure that only members of the music community are allowed to register. These registrants are not likely to collect sensitive health or financial data. We also have specific policies such as Privacy, Data Protection, and even Identity and Access Management amongst others, which are detailed in our answers to Q.30.a.2, of the Applicant Guidebook. (Please refer to a copy of our answer attached)

The fourth requirement is fully met. In our application for .music, we have established various mechanisms for cooperating with appropriate regulatory bodies, as well as the inclusion of a community representative regulatory body, the Policy Advisory Board (PAB). For example, the Acceptable Use Policy may be triggered through a variety of channels to mitigate the risk of fraudulent or illegal activity, including, among other things, community member complaint, private complaint, public alert, government or enforcement agency outreach, and the ongoing monitoring by the Registry or its partners. In all cases, we or our designees will alert Registry's registrar partners about any identified threats, and will work closely with them to bring offending sites into compliance.

The fifth requirement is fully met. Stated another way, this element requires: (a) Whois accuracy, and (b) an additional field in the Whois for capturing registrant contact details for complaints or abuse. With regards to:

(a) we recognize the importance of an accurate, reliable, and up-to-date WHOIS database to governments, law enforcement, intellectual property holders and the public as a whole and are firmly committed to complying with all of the applicable WHOIS specifications for data objects, bulk access, and lookups as defined in Specifications 4 and 10 to the Registry Agreement. In

addition, our Whois Service is compliant with all relevant RFCs including 3912. In addition, we have detailed in our response to the Applicant Guidebook Q28.4 additional measures we will take on our own initiative to promote Whois accuracy. These measures include a mechanism whereby third parties can submit complaints about inaccurate whois directly to the Applicant, as well as a manual review of a random sample of Whois information, no less than twice per year.

(b) our Whois architecture is flexible and has the capability of handling additional fields, such as an abuse point of contact. Regardless of the number of additional fields, the key aim is an accurate Whois database. Our application includes measures well beyond what is contractually required, and should demonstrate our commitment to maintaining an accurate Whois database.

(Please refer to a copy of our answer attached)

AREA 3 - Restricted or exclusive access to a generic gTLD

Restricted access: Access to .music is governed by a set of eligibility rules. Potential domain registrants must be members of, or affiliated with, at least one organization in the music community. Domain registrations may be accepted, but will not resolve until the registrant's membership credentials have been verified. This will require verification of relevant membership data during the registration process. This membership will be crosschecked with the relevant member organization. Verification of continued membership is required for renewal, to ensure ongoing eligibility.

Exclusive access: Although the GAC has identified a .music application as one limited by exclusive access, this is a different application than ours. The FarFurther application is open to all those who belong to the community as described in our application.

AREA 4 – Recognizing Community Support

Far Further's .Music LLC application is currently in contention with seven (7) other applicants. The contending applicants can be categorized as portfolio applicants (Donuts, TLDH, Radix, Famous Four), large Internet companies (Amazon, Google), and another start-up who has chosen to file under a community designation (DotMusic / CGR E-Commerce Ltd).

Prior to submitting our application, we spent years working with representatives from within the worldwide music community to develop policies for creative rights protections and membership requirements that not only serve the common interest of the global music community and meet ICANN's guidelines, but also are balanced with the needs of the internet user and music consumers. In 2011 Far Further's .Music LLC engaged with representative members of the global music community for the opportunity to represent the music community and to submit a .music application on its behalf. After a number of companies, including the other community applicant, went through a thorough vetting process, the community representatives chose to endorse Far Further's .Music LLC. Since then we have continued to receive endorsements from 60 international music-related organizations. These include worldwide music-focused cultural organizations, international musician's unions, music educator's organizations, musical instrument manufacturers, international music distributors, music rights and licensing organizations, independent and major record companies, musicians,

GAC Advice Response Form for Applicants

artists, songwriters, music publishers, “DIY” participants and other organizations representing both commercial and non-commercial stakeholders in the music community. For the full list please see <http://www.farfurther.com/global-community-support.html>

Without question, the music community will be impacted by a .music gTLD. Our mission is to ensure that this is a positive impact by fostering the long term survival and enjoyment of the art in the digital medium by protecting the creative rights of those who make their livelihood from the creation, performance, education and production of music. There is clear and collective support of .Music LLC's application from the music community, as there is no other .music applicant who can claim the number and scale of national and international music organizations as supporters.

SUMMARY

We have spent significant time and resources to proactively meet and in many cases exceed both ICANN's and even the GAC's expectations of new gTLD applicants. We have designed a registry that is stable and secure, with innovative policies and implementation mechanisms to ensure a safe and secure user experience. We encourage the board to acknowledge the good faith we and many other applicants exercised in believing and participating in the multi-stakeholder process that culminated in the Applicant Guidebook. The process resulted in new protections for communities, consumers and trademark holders. While new recommendations for protections are always welcome, and the .music application addresses these new recommendations, the discussions of these new issues should occur in parallel with application processing. We therefore urge the board to resist delaying the program while new protections are discussed.

20(e). Provide a description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD.

e) Please provide a complete description of the applicant's intended registration policies in support of the community-based purpose of the applied-for gTLD. The .music TLD will be a restricted domain space where second level .music domain names can be registered by eligible individuals, businesses and not-for-profit entities all around the globe. The following policies and mechanisms will be used to ensure support of the community-based purpose of the .music TLD: 1. Music Association/Organization membership: Potential domain registrants must be members of or affiliated with at least one Member Organization of the Global Music Community. Domain registrations may be accepted, but will not resolve until the registrant's membership credentials have been verified. This will require verification of relevant membership data during the registration process. This membership will be crosschecked with the relevant Member Organization. Verification of continued membership is required for renewal, to ensure ongoing eligibility. 2. Registrant Agreement: Presented during the registration process, this agreement will require registrant compliance with the dotMusic Registry rules and Acceptable Use Policy (for details see Q28). 3. Qualified Registrars and Member based Resellers: .music domains will only be available via ICANN accredited registrars (and their resellers) with demonstrated technical capability who have agreed to comply with .music's Registry/Registrar Agreement. In order to ensure strict compliance with .music policy and offer the greatest opportunities to our community, the dotMusic registry will encourage Member Organizations of the GMC to become accredited resellers. In addition, .music will operate as a global registry from inception. Formatting flexibility is required to accommodate bandwidth constraints that may be experienced in the developing world. Accordingly, the dotMusic Registry will not mandate any particular formatting or usage. Reserved Names: dotMusic Registry will reserve the following classes of domain names, which will not be available to registrants via the Sunrise or subsequent periods: • The reserved names required in Specification 5 of the new gTLD Registry Agreement. • The geographic names required in Specification 5 of the new gTLD Registry Agreement, and as per our response to Question 21. See our response to Question 22 ("Protection of Geographic Names") for details. • The registry operator will reserve its own name and variations thereof, and registry operations names (such as nic.music, and registry.music,), so that we can point them to our Web site. Reservation of the registry operator's names was standard in ICANN's past gTLD contracts. • We will also reserve names related to ICANN and Internet standards bodies (iana.music, ietf.music, www.music, etc.), for delegation of those names to the relevant organizations upon their request. Reservation of this type of name was standard in ICANN's past gTLD contracts. The list of reserved names will be public prior to the launch of the Sunrise period. Premium Names: • The dotMusic Registry will also designate a set of "premium names," which will be set aside for distribution via special mechanisms. Premium names have been a standard feature of TLD rollouts since 2005. The list of premium names will be public prior to the launch of the Sunrise period. • Premium names will be distributed by application only. Applicants would be required to describe how the intended use of a given premium name will result in demonstrable benefits to the .music community. The policies and procedures for receipt, review, and award of premium name

applications will be based on input from the PAB and will be posted on the dotMusic Registry web site in advance. The rules to ensure transparency, integrity and in the distribution of names, include but are not limited to:

- a. Strict prohibition of all employees of the dotMusic Registry operator, and its contractors, against bidding in auctions or having any ownership or interest in a premium name applicant.
- b. Use of the Trademark Clearinghouse during General Availability (Trademark Claims Service) for an additional 60 days, for notifications of new registrations only where the string is a complete match with a filing in the Trademark Clearinghouse.

Dispute Resolution Mechanisms:

- Registrants and rights holders will have access to several dispute mechanisms. These are fair and transparent processes to adjudicate claims to domain names, and they also protect registrants against reverse domain hijacking.
- Names registered in the Sunrise Period will be subject to a Sunrise Dispute Policy. This policy and procedure will be in effect for a finite time period, to provide special protection of qualified trademark rights. Please see our response to Question 29 ("Rights Protection Mechanisms") for full details.
- As required by ICANN, .music domains will be subject to the Uniform Dispute Resolution Policy (UDRP). Please see our response to Question 29 ("Rights Protection Mechanisms") for full details.
- As required by ICANN, .music domains will also be subject to the Universal Rapid Suspension (URS) policy. Please see our answer to Question 29 ("Rights Protection Mechanisms") for full details.
- We will provision systems to take in and administrate cases as per ICANN's Registrar Transfer Dispute Resolutions Policy (<http://www.icann.org/en/transfers/dispute-policy-12jul04.htm>). This process will allow registrars to protect registrants by filing disputes about inter-registrar transfers that they believe were unauthorized or improperly executed.
- MEDRP: .music will support the Music Eligibility Dispute Resolution Procedure. This dispute mechanism will be available to members of the .music community and end-users to file claims against registrants of the .music domain for violations of the .music eligibility and use community rules and policies. We will select an adjudication service from the list of ICANN approved arbitrators to facilitate MEDRP claims (please see Q28 and Q29 for further details).

Eligibility: who is eligible to register a second-level name in the gTLD, and how will eligibility be determined.

- Potential domain registrants must be members of or affiliated with at least one Member Organizations of the Global Music Community. Domain registrations may be accepted, but will not resolve until the registrant's membership credentials have been verified. Please see the "Proposed .music Registration Process" attachment in our answer to Q48 for a step-by-step visual depiction of the process. **Should the registrant fail to meet the eligibility criteria, they risk the suspension and ultimately deletion or loss of their domain name. Verification of continued membership is required for renewal, to ensure ongoing eligibility.**

Name selection: what types of second-level names may be registered in the gTLD.

- Please see the Reserve Name policy detailed above. Beyond these, eligible registrants may register domains in compliance with the Registrant Agreement and its Acceptable Use Policy.

Content/Use: what restrictions, if any, the registry operator will impose on how a registrant may use its registered name.

- Registrants must hold valid rights to all materials displayed on and/or distributed through their specific site. **Please see Q28 for details on .music's Acceptable Use Policy. The dotMusic registry will be regularly monitored potential violations and also provide a robust abuse reporting process for such violations noticed by others. Should the**

registrant be found in violation, they risk the suspension and ultimately deletion or loss of their domain name. Enforcement: what investigation practices and mechanisms exist to enforce the policies above, what resources are allocated for enforcement, and what appeal mechanisms are available to registrants. - The .music Registry-Registrar and the Registrant Agreements will include extensive monitoring, enforcement (up to and including take downs) as well as appeal provisions. Monitoring o The .music TLD will be monitored by online scanning tools such as those that search for keywords that are commonly used to identify the availability of music distributed without appropriate authorization or in violation of intellectual property rights. Suspected abuse from such automated search tools will flag an analyst from our abuse team (see Q28) who will then access and review the website to confirm the abuse. Neustar will enable .music analysts to suspend domain names as required. o The dotMusic Registry will also use Abuse Mitigation Services to monitor, detect and mitigate domain name abuses (se Q29) Enforcement and Appeal o Registrants in violation of the Registrant Agreement risk the suspension and ultimately deletion or loss of their domain name. o As detailed in our answer to Q28, failure to comply with the Registry-Registrar agreement will result in loss or revocation of registrar accreditation. o The dotMusic Registry will use standard dispute mechanisms (see Q28 and Q29), such as UDRP, URS etc. However, in the case of serious allegations of failure to meet community member eligibility requirements, we have created a MEDRP (Music Community Eligibility Dispute Resolution Procedure). This dispute mechanism will be arbitrated by a third party approved by ICANN such as WIPO and will be binding on all parties (provisions will be named in the Registrant Agreement). Disputes may be initiated by community members or end-users; however, there will be reasonable limitations developed on the filing of disputes to prevent abuse of the mechanism. Please see our answer to Q20(b) under "Accountability mechanisms of the applicant to the community" for additional details on appeal procedures.

28. Abuse Prevention and Mitigation

28.1 Abuse Prevention and Mitigation

Strong abuse prevention of a new gTLD is an important benefit to the internet community. .music and its registry operator and back-end registry services provider, Neustar, agree that a registry must not only aim for the highest standards of technical and operational competence, but also needs to act as a steward of the space on behalf of the Internet community and ICANN in promoting the public interest. Neustar brings extensive experience establishing and implementing registration policies. This experience will be leveraged to help .music combat abusive and malicious domain activity within the new gTLD space.

One of those public interest functions for a responsible domain name registry includes working towards the eradication of abusive domain name registrations, including, but not limited to, those resulting from:

- Illegal or fraudulent actions
- Spam
- Phishing

- Pharming
- Distribution of malware
- Fast flux hosting
- Botnets
- Distribution of child pornography
- Online sale or distribution of illegal pharmaceuticals.
- Intellectual Property Violation
- Copyright Violation

More specifically, although traditionally botnets have used Internet Relay Chat (IRC) servers to control registry and the compromised PCs, or bots, for DDoS attacks and the theft of personal information, an increasingly popular technique, known as fast-flux DNS, allows botnets to use a multitude of servers to hide a key host or to create a highly-available control network. This ability to shift the attacker's infrastructure over a multitude of servers in various countries creates an obstacle for law enforcement and security researchers to mitigate the effects of these botnets. But a point of weakness in this scheme is its dependence on DNS for its translation services. By taking an active role in researching and monitoring these sorts of botnets, .music's partner, Neustar, has developed the ability to efficiently work with various law enforcement and security communities to begin a new phase of mitigation of these types of threats.

Policies and Procedures to Minimize Abusive Registrations

A Registry must have the policies, resources, personnel, and expertise in place to combat such abusive DNS practices. As .music's registry provider, Neustar is at the forefront of the prevention of such abusive practices and is one of the few registry operators to have actually developed and implemented an active "domain takedown" policy. We also believe that a strong program is essential given that registrants have a reasonable expectation that they are in control of the data associated with their domains, especially its presence in the DNS zone. Because domain names are sometimes used as a mechanism to enable various illegitimate activities on the Internet often the best preventative measure to thwart these attacks is to remove the names completely from the DNS before they can impart harm, not only to the domain name registrant, but also to millions of unsuspecting Internet users.

Removing the domain name from the zone has the effect of shutting down all activity associated with the domain name, including the use of all websites and e-mail. The use of this technique should not be entered into lightly. .music has an extensive, defined, and documented process for taking the necessary action of removing a domain from the zone when its presence in the zone poses a threat to the security and stability of the infrastructure of the Internet or the registry.

Abuse Point of Contact

As required by the Registry Agreement, .music will establish and publish on its website a single abuse point of contact responsible for addressing inquiries from law enforcement, its community members and the public related to malicious and abusive conduct. .music will also provide such information to ICANN prior to the delegation of any domain names in the TLD. This information shall consist of, at a minimum, a valid e-mail address dedicated solely to the handling of malicious

conduct complaints, and a telephone number and mailing address for the primary contact. We will ensure that this information will be kept accurate and up to date and will be provided to ICANN if and when changes are made. In addition, with respect to inquiries from ICANN-Accredited registrars, our registry services provider, Neustar, shall have an additional point of contact, as it does today, handling requests by registrars related to abusive domain name practices.

28.2 Policies Regarding Abuse Complaints

One of the key policies each new gTLD registry will need to have is an Acceptable Use Policy that clearly delineates the types of activities that constitute "abuse" and the repercussions associated with an abusive domain name registration. In addition, the policy will be incorporated into the applicable Registry-Registrar Agreement and reserve the right for the registry to take the appropriate actions based on the type of abuse. This will include locking down the domain name - preventing any changes to the contact and nameserver information associated with the domain name, placing the domain name "on hold" rendering the domain name non-resolvable, transferring to the domain name to another registrar, and/or in cases in which the domain name is associated with an existing law enforcement investigation, substituting name servers to collect information about the DNS queries to assist the investigation.

The dotMusic Registry will adopt an Acceptable Use Policy that clearly defines the types of activities that will not be permitted in the TLD and reserves the right of the Applicant to lock, cancel, transfer or otherwise suspend or take down domain names violating the Acceptable Use Policy and allow the Registry where and when appropriate to share information with law enforcement. Each ICANN-Accredited Registrar (even in the case of a sole registrar model) must agree to pass through the Acceptable Use Policy to its Resellers (if applicable) and ultimately to the TLD registrants. Below is the Registry's initial Acceptable Use Policy that we will use in connection with .music.

the dotMusic Registry Acceptable Use Policy

This Acceptable Use Policy gives the Registry the ability to quickly lock, cancel, transfer or take ownership of any .music domain name, either temporarily or permanently, if the domain name is being used in a manner that appears to threaten the stability, integrity or security of the Registry, or any of its registrar partners - and/or that may put the safety and security of any registrant or user at risk. The process also allows the Registry to take preventive measures to avoid any such criminal or security threats.

The Acceptable Use Policy may be triggered through a variety of channels, including, among other things, community member complaint, private complaint, public alert, government or enforcement agency outreach, and the on-going monitoring by the Registry or its partners. In all cases, the Registry or its designees will alert Registry's registrar partners about any identified threats, and will work closely with them to bring offending sites into compliance.

The following are some (but not all) activities that will be subject to rapid domain compliance:

- Phishing: the attempt to acquire personally identifiable information by masquerading as a website other than .music's own.
- Pharming: the redirection of Internet users to websites other than those the user intends to visit, usually through unauthorized changes to the Hosts file on a victim's computer or DNS records in DNS servers.
- Dissemination of Malware: the intentional creation and distribution of "malicious" software designed to infiltrate a computer system without the owner's consent, including, without limitation, computer viruses, worms, key loggers, and Trojans.
- Fast Flux Hosting: a technique used to shelter Phishing, Pharming and Malware sites and networks from detection and to frustrate methods employed to defend against such practices, whereby the IP address associated with fraudulent websites are changed rapidly so as to make the true location of the sites difficult to find.
- Botnetting: the development and use of a command, agent, motor, service, or software which is implemented: (1) to remotely control the computer or computer system of an Internet user without their knowledge or consent, (2) to generate direct denial of service (DDOS) attacks.
- Malicious Hacking: the attempt to gain unauthorized access (or exceed the level of authorized access) to a computer, information system, user account or profile, database, or security system.
- Child Pornography: the storage, publication, display and/or dissemination of pornographic materials depicting individuals under the age of majority in the relevant jurisdiction.
- Community Abuse Considerations: The dotMusic Registry will create a safe TLD in .music by actively monitoring and combating copyright infringement, cybersquatting, typo-squatting and any other domain name and registration based abusive practices. They will also actively monitor and combat the harder abuse instances that plague the music industry in the online world. These are defined as copyright infringement that results from P2P sharing, illegal digital distribution, along with any and all types of Intellectual Property infringement involving the DNS.

The Registry reserves the right, in its sole discretion, to take any administrative and operational actions necessary, including the use of computer forensics and information security technological services, among other things, in order to implement the Acceptable Use Policy. In addition, the Registry reserves the right to deny, cancel or transfer any registration or transaction, or place any domain name(s) on registry lock, hold or similar status, that it deems necessary, in its discretion; (1) to protect the integrity and stability of the registry; (2) to enforce the requirements of community membership and acceptable use (3) to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process; (4) to avoid any liability, civil or criminal, on the part of Registry as well as its affiliates, subsidiaries, officers, directors, and employees; (5) per the terms of the registration agreement or (6) to correct mistakes made by the Registry or any Registrar in connection with a domain name registration. Registry also reserves the right to place upon registry lock, hold or similar status a domain name during resolution of a dispute.

Taking Action Against Abusive and/or Malicious Activity

The Registry is committed to ensuring that those domain names associated with abuse or Malicious conduct in violation of the

Acceptable Use Policy are dealt with in a timely and decisive manner. These include taking action against those domain names that are being used to threaten the stability and security, the community requirements of the TLD, or is part of a real-time investigation by law enforcement.

Once a complaint is received from a trusted source, third-party, or detected by the Registry, the Registry will use commercially reasonable efforts to verify the information in the complaint. If that information can be verified to the best of the ability of the Registry, the sponsoring registrar and the relevant reseller will be notified and be given 12 hours to investigate the activity and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the Registry to keep the name in the zone. If the registrar (reseller) has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "ServerHold". Although this action removes the domain name from the TLD zone, the domain name record still appears in the TLD WHOIS database so that the name and entities can be investigated by law enforcement should they desire to get involved.

Coordination with Law Enforcement

With the assistance of Neustar as its back-end registry services provider, .music can meet its obligations under Section 2.8 of the Registry Agreement where required to take reasonable steps to investigate and respond to reports from law enforcement and governmental and quasi-governmental agencies of illegal conduct in connection with the use of its TLD. The Registry will respond to legitimate law enforcement inquiries within one business day from receiving the request. Such response shall include, at a minimum, an acknowledgement of receipt of the request, Questions or comments concerning the request, and an outline of the next steps to be taken by .Music for rapid resolution of the request.

In the event such request involves any of the activities which can be validated by the Registry and involves the type of activity set forth in the Acceptable Use Policy, the sponsoring registrar and its reseller is then given 12 hours to investigate the activity further and either take down the domain name by placing the domain name on hold or by deleting the domain name in its entirety or providing a compelling argument to the registry to keep the name in the zone. If the registrar (reseller) has not taken the requested action after the 12-hour period (i.e., is unresponsive to the request or refuses to take action), the Registry will place the domain on "serverHold".

Monitoring for Malicious Activity

28.3 Measures for Removal of Orphan Glue Records

As the Security and Stability Advisory Committee of ICANN (SSAC) rightly acknowledges, although orphaned glue records may be used for abusive or malicious purposes, the "dominant use of orphaned glue supports the correct and ordinary operation of the DNS." See <http://www.icann.org/en/committees/security/sac048.pdf>.

While orphan glue often support correct and ordinary operation of the DNS, we understand that such glue records can be used maliciously to point to name servers that host domains used in illegal phishing, bot-

nets, malware, and other abusive behaviors. Problems occur when the parent domain of the glue record is deleted but its children glue records still remain in DNS. Therefore, when the Registry has written evidence of actual abuse of orphaned glue, the Registry will take action to remove those records from the zone to mitigate such malicious conduct.

Neustar run a daily audit of entries in its DNS systems and compares those with its provisioning system. This serves as an umbrella protection to make sure that items in the DNS zone are valid. Any DNS record that shows up in the DNS zone but not in the provisioning system will be flagged for investigation and removed if necessary. This daily DNS audit serves to not only prevent orphaned hosts but also other records that should not be in the zone.

In addition, if either .music or Neustar become aware of actual abuse on orphaned glue after receiving written notification by a third party through its Abuse Contact or through its customer support, such glue records will be removed from the zone.

28.4 Measures to Promote WHOIS Accuracy

The dotMusic Registry acknowledges that ICANN has developed a number of mechanisms over the past decade that are intended to address the issue of inaccurate WHOIS information. Such measures alone have not proven to be sufficient and .music will offer a mechanism whereby third parties can submit complaints directly to the Applicant (as opposed to ICANN or the sponsoring Registrar) about inaccurate or incomplete WHOIS data. Such information shall be forwarded to the sponsoring Registrar, who shall be required to address those complaints with their registrants. Thirty days after forwarding the complaint to the registrar, .music will examine the current WHOIS data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the Registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, Applicant reserves the right to suspend the applicable domain name(s) until such time as the Registrant is able to cure the deficiencies.

In addition, .music shall on its own initiative, no less than twice per year, perform a manual review of a random sampling of .music domain names to test the accuracy of the WHOIS information. Although this will not include verifying the actual information in the WHOIS record, .music will be examining the WHOIS data for prima facie evidence of inaccuracies. In the event that such evidence exists, it shall be forwarded to the sponsoring Registrar, who shall be required to address those complaints with their registrants. Thirty days after forwarding the complaint to the registrar, the Applicant will examine the current WHOIS data for names that were alleged to be inaccurate to determine if the information was corrected, the domain name was deleted, or there was some other disposition. If the Registrar has failed to take any action, or it is clear that the Registrant was either unwilling or unable to correct the inaccuracies, .music reserves the right to suspend the applicable domain name(s) until such time as the Registrant is able to cure the deficiencies.

28.4.1 Authentication of Registrant Information and Monitoring of

Registration Data

Authentication of registrant information as complete and accurate at time of registration. Most .music registrations will be sold by "reseller".music community member associations to their memberships. These resellers will in many cases be able to verify their own memberships at the time of domain sale. To address the case where the reseller lacks the ability to do this in the domain sale process, the .music reseller platform will capture all registrant declaration as to community membership including the identification of their accredited member association. All registrations associated with a given member association will be reported daily to the relevant member association for asynchronous review. Discrepancies in declared community membership will be addressed through the standard abuse practices described in the Acceptable Use Policy.

28.4.3 Policies and Procedures Ensuring Compliance (RRA and RA)

The dotMusic Registry intends to operate as a sole registrar model but will offer exclusive reseller services for music associations to sell domain names to their memberships. This registrar entity and subsequent resellers will be required to enforce measures, establish policies and procedures to ensure compliance, which may include audits, financial incentives, penalties, or other means.

The Registry-Registrar Agreement (RRA) will contain the following terms which will be passed through to the Reseller Agreements where applicable:

1. Confirming that Registrants have a bona fide affiliation with a legitimate Community Member.
2. Requiring that Registrants execute a Registrant Agreement which provides an additional level in securing the protection of creative and intellectual property rights and serves to mitigate copyright infringement, piracy and any other abuse as outlined in the dotMusic Registry policies.
 - a. The electronic acceptance of the Registrant Agreement would be a pre-requisite to the confirmation of any registration or renewal transaction performed by the Registrar (reseller).
 - b. Ensuring an electronic audit trail is maintained at the registrar, referencing each and every .music registration to an acceptance date of the Registrant Agreement.
3. Requiring their registrants to certify on an annual basis that they are in compliance with all Accreditation Criteria and other policies and requirements governing domains, including, but not limited to, that the registrant:
 - a. is not, and will not be involved in any form of copyright infringement, or otherwise facilitate such copyright infringement or provide access to any software, service or application that facilitates copyright infringement, directly or indirectly through the domain;
 - b. has all the rights necessary to transmit, display, provide access to, reproduce, distribute, publish, link to, perform or otherwise exploit any copyrighted content made available directly or indirectly through the domain;
 - c. has and will maintain appropriate records sufficient to verify any claimed licenses or authorizations to use or exploit creative content owned by third parties;
 - d. will only use the domain in connection with activities involving

legitimate/authorized uses of creative works and not to facilitate infringement; and

e. meets the other Accreditation Criteria and that their operation of the site is legal

4. Acknowledgement that proxy registrations are disallowed, except those proxy registration services that are approved by, and fully comply with ICANN standards and .Music Registry policies.

5. Acknowledgement that the registrar and/or reseller will enforce the terms of the Registrant Agreement.

6. Acknowledgement that the registrar and/or reseller will endeavor to maintain WHOIS accuracy by:

a. authenticating the registrant information as complete and accurate at time of registration,

b. ensure the registrant is a valid member of good standing in at least of one of Coalition Member Organizations. Means requiring submission of identifying membership information.

c. ensuring completeness and verifying all contact information of principals mentioned in registration data. Means may include utilizing simple web based technology to discern and thus reject inaccurate data (such as mismatch of zip code and State Code), and other means,

d. regular monitoring of registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data. Means to do so would include periodic email alerts to the domain name registrant to verify or correct WHOIS information.

7. Acknowledgement of and compliance with .Music Registry's abuse detection and mitigation procedures, up to and including domain takedown.

8. Acknowledgement of the .Music Registry's right to take action to ensure compliance with the abuse detection and mitigation policies and procedures of the .Music Registry.

a. Acceptance of .Music's right to suspend domains found to be in violation of .Music policies.

b. Implement reasonable procedures to identify repeat registrants that attempt to avoid detection as repeat offender registrants, etc.

c. Registrar (resellers) will be required to promptly take down/deregister domains that fail to comply with the Accreditation Criteria and other policies governing domains (including, but not limited to breach of the certification contemplated below), and to refuse to accept registrations from registrants that previously violated such criteria or policies.

d. Annual verification of and electronic acceptance of the RRA.

Last but not least, the .Music Registry will create the Registrant Agreement. The RA would be furnished to all .Music registrar's resellers as part of the reseller accreditation procedures. The RA would at a minimum require all registrants to:

1. Agree to and abide by the terms of the .Music Registrant Agreement.

2. Adhere to the protection of Creative and Intellectual Property rights such as mitigating copyright infringement and piracy as well as guarding against other abuses such as cyber squatting, typo-squatting or other abusive registration practices defined in the agreement.

3. Annually notifying Registrants of their current agreement to:

a. Avoid of any form of copyright infringement, or otherwise facilitate such copyright infringement or provide access to any

software, service or application that facilitates copyright infringement, directly or indirectly through the domain;

b. Possess all necessary rights to transmit, display, provide access to, reproduce, distribute, publish, link to, perform or otherwise exploit any copyrighted content made available directly or indirectly through the domain;

c. Maintain appropriate records to sufficiently verify any claimed licenses or authorizations to use or exploit creative content owned by third parties;

d. Use the domain only in connection with activities involving legitimate/authorized uses of creative works and not to facilitate infringement;

e. Meet other Accreditation Criteria as set forth from time to time

f. Implement reasonable monitoring of their site and their domain to police against infringing activity;

g. Implement reasonable enforcement procedures to ensure that any unauthorized content is removed before being placed on the domain or immediately removed once the registrant becomes aware of such unauthorized content;

h. Proactively ensure unauthorized content is not made available via the domain;

i. Acknowledge the .Music Registry's right to engage in monitoring and policing activity of the registrant's domain and site; and

j. Provide evidence of reasonable security and other measures that will be used to protect content made available from the domain.

4. Acknowledgement that if the registrant's domain use is found to be in violation of the .Music Registrant Agreement, the domain will be subject to suspension and reclaimed by the Registry.

.Music Registry will set itself up as a sole registrar, providing reseller capability to Community Member Associations, who will in turn sell .Music domains to their memberships. This model will provide the following advantages:

- minimize malicious conduct in .music (eg: quicker takedown in case of abusive behavior),
- minimize dot Music Registry's administrative and technical costs,
- maximize compliance with dotMusic Registry policies, and
- maximize control, as the dotMusic Registry would be the "Registrar of Record" in the WHOIS.

28.5 Resourcing Plans

Responsibility for abuse mitigation rests with a variety of functional groups. The Abuse Monitoring team is primarily responsible for providing analysis and conducting investigations of reports of abuse. The customer service team also plays an important role in assisting with the investigations, responded to customers, and notifying registrars of abusive domains. Finally, the Policy/Legal team is responsible for developing the relevant policies and procedures.

The necessary resources will be pulled from the pool of available resources described in detail in the response to Question 31, as well as resources described under the Abuse and Compliance Team. The following resources are available from those teams:

Customer Support – 12 employees

Policy/Legal – 2 employees

Abuse and Compliance Monitoring Team – 4 employees

The dotMusic Registry, as noted in our financials, has provisioned for a community compliance and support function. Oncall 24/7/365, this team supports both the community eligibility verification functions as well as providing a Tier 2 escalation for abuse cases reported through the Tier 1 Neustar Customer Support Teams. We estimate the community and compliance support function will spend no more than 10% of their collective time responding to abuse complaints in view of the estimated registration volumes and for the following reasons:

- Registrants are verified members of an accredited .music community organization or association in order to have an "active" registration and are held to strict community eligibility requirements
- Registrants are well informed that IP protection is a fundamental priority to attain a .music domain. They risk substantial investment loss by risking non-compliance to the participation requirements in .music
- Registrants who lose their .music registrations due to non-compliance can put their related music organization or association memberships at risk
- The .music domain while market-competitive, is not a low cost domain space, which further has a cooling effect on attempted abusive registration
- Regular compliance scanning of the namespace for both community eligibility requirement conformance and abuse detection, as described in Q18 and earlier in Q28 will operate as a deterrent to abusive registration use.

30.(a).2 Summary of Security Policies

Neustar has developed a comprehensive Information Security Program in order to create effective administrative, technical, and physical safeguards for the protection of its information assets, and to comply with Neustar's obligations under applicable law, regulations, and contracts. This Program establishes Neustar's policies for accessing, collecting, storing, using, transmitting, and protecting electronic, paper, and other records containing sensitive information.

-The policies for internal users and our clients to ensure the safe, organized and fair use of information resources.

-The rights that can be expected with that use.

-The standards that must be met to effectively comply with policy.

-The responsibilities of the owners, maintainers, and users of Neustar's information resources.

-Rules and principles used at Neustar to approach information security issues

The following policies are included in the Program:

1. Acceptable Use Policy

The Acceptable Use Policy provides the rules of behavior covering all Neustar Associates for using Neustar resources or accessing sensitive information.

2. Information Risk Management Policy

The Information Risk Management Policy describes the requirements for the on-going information security risk management program, including defining roles and responsibilities for conducting and evaluating risk assessments, assessments of technologies used to provide information security and monitoring procedures used to measure policy compliance.

3. Data Protection Policy

The Data Protection Policy provides the requirements for creating, storing, transmitting, disclosing, and disposing of sensitive information, including data classification and labeling requirements, the requirements for data retention. Encryption and related technologies such as digital certificates are also covered under this policy.

4. Third Party Policy

The Third Party Policy provides the requirements for handling service provider contracts, including specifically the vetting process, required contract reviews, and on-going monitoring of service providers for policy compliance.

5. Security Awareness and Training Policy

The Security Awareness and Training Policy provide the requirements for managing the on-going awareness and training program at Neustar. This includes awareness and training activities provided to all Neustar Associates.

6. Incident Response Policy

The Incident Response Policy provides the requirements for reacting to reports of potential security policy violations. This policy defines the necessary steps for identifying and reporting security incidents, remediation of problems, and conducting lessons learned post-mortem reviews in order to provide feedback on the effectiveness of this Program. Additionally, this policy contains the requirement for reporting data security breaches to the appropriate authorities and to the public, as required by law, contractual requirements, or regulatory bodies.

7. Physical and Environmental Controls Policy

The Physical and Environment Controls Policy provides the requirements for securely storing sensitive information and the supporting information technology equipment and infrastructure. This policy includes details on the storage of paper records as well as access to computer systems and equipment locations by authorized personnel and visitors.

8. Privacy Policy

Neustar supports the right to privacy, including the rights of individuals to control the dissemination and use of personal data that describes them, their personal choices, or life experiences. Neustar supports domestic and international laws and regulations that seek to protect the privacy rights of such individuals.

9. Identity and Access Management Policy

The Identity and Access Management Policy covers user accounts (login ID naming convention, assignment, authoritative source) as well as ID lifecycle (request, approval, creation, use, suspension, deletion, review), including provisions for system/application accounts, shared/group accounts, guest/public accounts, temporary/emergency accounts, administrative access, and remote access. This policy also includes the user password policy requirements.

10. Network Security Policy

The Network Security Policy covers aspects of Neustar network infrastructure and the technical controls in place to prevent and detect security policy violations.

11. Platform Security Policy

The Platform Security Policy covers the requirements for configuration management of servers, shared systems, applications, databases, middle-ware, and desktops and laptops owned or operated by Neustar Associates.

12. Mobile Device Security Policy

The Mobile Device Policy covers the requirements specific to mobile devices with information storage or processing capabilities. This policy includes laptop standards, as well as requirements for PDAs, mobile phones, digital cameras and music players, and any other

removable device capable of transmitting, processing or storing information.

13. Vulnerability and Threat Management Policy

The Vulnerability and Threat Management Policy provides the requirements for patch management, vulnerability scanning, penetration testing, threat management (modeling and monitoring) and the appropriate ties to the Risk Management Policy.

14. Monitoring and Audit Policy

The Monitoring and Audit Policy covers the details regarding which types of computer events to record, how to maintain the logs, and the roles and responsibilities for how to review, monitor, and respond to log information. This policy also includes the requirements for backup, archival, reporting, forensics use, and retention of audit logs.

15. Project and System Development and Maintenance Policy

The System Development and Maintenance Policy covers the minimum security requirements for all software, application, and system development performed by or on behalf of Neustar and the minimum security requirements for maintaining information systems.

1-961-6109 Response to GAC Advice

Respondent:

Applicant Name	Excellent First Limited
Application ID	1-961-6109
Applied for TLD (String)	慈善(charity)

Response:

Summary

The purpose of the proposed gTLD 慈善(.charity) is to create a trusted and intuitive space for Chinese-speaking Internet users to carry out and interact with charity activities in their own language.

Evidenced by the numerous mechanisms to minimise harm to consumers, respond in real time to allegations of abuse such as phishing and pharming, and the applicant's Public Interest Commitment, the applicant welcomes the GAC's advice, and is confident that it will meet or exceed the GAC's requirements in every aspect. As an example, the requirement for data accuracy in the 慈善(.charity) gTLD will be 90% + accuracy and registrars with less than 80% WHOIS data accuracy will be in breach of agreement. The data verification requirements anticipate and exceed those set out in the recently published 2013 RAA.

Standards of data accuracy and abuse monitoring in 慈善(.charity) will far exceed that seen in the current gTLD environment. Senior officers from the applicant, and the registry backend provider have been closely involved in running CNNIC for many years, and have successfully road tested many of the processes set out in the application. The applicant also recently strengthened its leadership team through the recruitment of a Head of Policy and Compliance who held a senior position with ICANN Contractual Compliance for many years.

Quality and consumer protection will be at the heart of the entire domain name lifecycle, including:

- Registrant eligibility criteria, to ensure affiliation with relevant charities.
- Validation of WHOIS data prior to registration; validation of registrant email in grace period.
- Post-registration data quality checking.
- Real time abuse mitigation processes in collaboration with law enforcement, with appeal mechanisms to safeguard registrant privacy and fundamental rights.
- Full compliance with ICANN consensus policies eg on third party rights protection.
- Consequences of failure to meet requirements are fully set out and include cancellation or suspension of domain names; breach of registrar accreditation agreement.

Background – The 慈善(.charity) gTLD, the charitable sector and Internet environment in Chinese language communities

The 慈善(.charity) gTLD will create a trusted space for the charity sector in Chinese speaking communities. The sector is emergent, and despite substantial corporate social responsibility donations by large corporations (see www.e-chinalife.com/about-us/commonweal.html), the

1-961-6109 Response to GAC Advice

formation of stand-alone charities has been, to date, comparatively rare. For example the ONE charity has recently become established in China.

The 慈善(.charity) gTLD is one of 130+ of new gTLD applications for internationalised domain names. By creating a namespace in the mother-tongue of its target users, the 慈善(.charity) gTLD will benefit Chinese speaking Internet users who will be able to read, understand and memorise domain names in the 慈善(.charity) gTLD more easily than equivalent Latin-script domain names. The applicant has the benefit of being led by one of the pioneers of internationalised domain names, James Seng.

There are numerous safeguards to ensure that the 慈善(.charity) gTLD will be trustworthy: the price will be higher than other “open” style gTLDs, and eligibility criteria will ensure that registrants that hold themselves out as charities through their 慈善(.charity) domain names will be entitled to do so. The application for 慈善(.charity) gTLD is conservative in its projections of domain name registration volumes (just 9,800 by year 3) reflecting the minority interest, and selective nature of this domain.

The 慈善(.charity) gTLD is targeted at Chinese speaking Internet users primarily in China. We anticipate there are also Chinese speaking Internet users in Hong Kong, Macao, Taiwan, Singapore and Malaysia that may have a use for 慈善(.charity).

With growing wealth in China and the emergence of Chinese multi-national companies, Chinese citizens and corporates are more willing to contribute to charitable good causes. Unfortunately, regulation of charities is still in its infancy and hence, many of the developed-country assumptions about the environment do not apply.

Therefore, the applicant sees the 慈善(.charity) gTLD as one element of many which will help the development and coordination of the emerging charity sector in China.

Building relationships with key stakeholders in an emerging sector

The charity sector in China is not as long-established as in developed countries. Not only are charities themselves a relatively new phenomenon, but the country also lacks the legal and regulatory protection of charitable institutions, and civil society has not yet developed interlocutors such as the NGOs and volunteer representatives which are part of the charitable ecosystem in the West.

The applicant of the 慈善(.charity) gTLD sees its role as helping to support the emerging charitable sector. To this end, it is already reaching out to newly-established Chinese charities, and building relationships with them. As NGOs, regulators and other relevant organisations emerge, the applicant will proactively work to build dialogue with them. This will ensure that the policies of the 慈善(.charity) gTLD will be sensitive and responsive to the needs of all stakeholders in the relevant markets.

1-961-6109 Response to GAC Advice

Detailed response to GAC safeguard advice

Overarching principles

1. Registrant rights and due process

The application for 慈善(.charity) contains numerous anti-abuse and data accuracy mechanisms, but in every case, registrant rights are also safeguarded. For example, the real-time abuse monitoring system which enables phishing sites to be taken down with immediate effect provide an appeal mechanism for registrants, and for the restoration of the domain name once the harm has been mitigated (see application paragraph 28.3.2.5).

2. Respect all substantive and procedural laws under the applicable jurisdictions

Balancing numerous applicable laws is challenging in all Internet environments. The target market of 慈善(.charity) will be Chinese speaking Internet users in China but as with any Internet issue, the user-base will not be limited by jurisdiction or geography. Therefore, in keeping with the applicant's Public Interest Commitment, and vision of the 慈善(.charity) as a trusted space for the charitable sector, the applicant views the balancing of applicable laws as an ongoing challenge. This will require careful consultation with relevant stakeholders prior to launch, and throughout the life-time of the 慈善(.charity) gTLD.

Specific mechanisms for handling applicable law issues include:

- The applicant will evaluate the effectiveness of registration eligibility criteria, and the criteria to trigger emergency suspension of domain names in response to requests from law enforcement. Policies will need to balance the legal requirements of different jurisdictions which are relevant to the charity sector, at a minimum those of the target markets (China, Hong Kong, Macao, Taiwan, Singapore, Malaysia).
- As described in the Applicant's PIC, eligibility criteria for the 慈善(.charity) gTLD will be subject to 60 days' public comment, during which governments are invited to highlight additional elements arising from applicable laws in their jurisdiction. Additional requirements so highlighted will be implemented within 180 days.

3. Be operated in an open manner consistent with general principles of openness and non-discrimination

Adherence to this principle is vital to building and maintaining trust in the 慈善(.charity) gTLD. The 慈善(.charity) gTLD will operate in an open and non-discriminatory manner, as befits its vision of creating a trusted and intuitive space for Chinese-speaking communities to interact with charity activities.

Safeguards applicable to all new gTLDs

1. WHOIS verification and checks

The applicant is confident that it meets or exceeds the GAC requirements for WHOIS verification and checks.

The relevant paragraphs of the applicant's application are:

- Paragraph 26 – WHOIS system requirements.

1-961-6109 Response to GAC Advice

- Paragraph 28.2.3 – WHOIS accuracy requirement.

As well as the standard registrant’s warranty for data accuracy, the application sets out numerous additional steps to ensure data accuracy, which **exceed** the GAC requirements on WHOIS:

- Data checking at least twice a year. The 慈善(.charity) gTLD will exceed this requirement. Random inspections on WHOIS information will be done on a **daily basis**, through the sending of verification emails. Failure by the registrant to respond will result in the suspension or cancellation of the domain name.
- Annual evaluation processes for registrars (see “Compliance Requirement for Registrars, application paragraph 28.2.3) will require greater than 90% accuracy levels. Those with below 90% accuracy levels will receive a warning; those with 80% or lower will be in breach of their registrar agreements. The accuracy requirements compare favourably to the currently low levels of WHOIS accuracy under .com and other gTLDs, which according to a study commissioned by ICANN in 2009 show that only 23% of records are fully accurate.

Over and above the GAC requirements and the proposed 2013 RAA, the 慈善(.charity) gTLD will require validation of registrant data **prior** to registration. Incomplete WHOIS information at the point of registration will result in the application being rejected. Email addresses will be verified by registrars within a 5 day grace period. A lack of confirmation from the email will result in the suspension or cancellation of the domain name without refund. Signed copies of the registration agreement (by the registrant) will be required. For individuals, a copy of passport or photo ID is required, and a business certificate for organisations.

Further, the applicant will require its registry services provider to carry out random inspections of WHOIS information on a **daily basis**. It will send out emails to the registered email address to ask for verification. Inaccurate data will be reported to the applicant. The applicant will then require the registrant to update its records within 10 working days. Failure to do so may result in the domain name being suspended or cancelled.

The applicant’s staff, through their experience with CNNIC, have track records of successfully running similar verification processes under .cn.

2. Mitigating abuse activity

The applicant is confident that it meets or exceeds the GAC requirements for WHOIS verification and checks. As stated in paragraph 28 of the application, “The applicant will not tolerate any abuse of the domain names under its management”.

Contract terms for the 慈善(.charity) gTLD prohibit malware, botnets, phishing, and pharming, and give the registry the right to deny, cancel or transfer any registration or transaction or place any domain names on suspension, takedown or similar status to prevent or mitigate domain name abuse (see application paragraph 28.1.2).

Rights protection mechanisms required by the ICANN processes are fully provided for in the 慈善(.charity) gTLD, for example PDDRP, RDRP, URS, UDRP, Sunrise and Trademark Claims.

1-961-6109 Response to GAC Advice

3. Security checks

As described in the applicant's PIC, the applicant will carry out on-going compliance monitoring including:

- Routine zone file scanning designed to detect possible registration abuse. The scanning includes Whois accuracy, suspicious activity or other anomalies.
- A 24/7 DNS resolution activity monitoring service. Any change of DNS server or IP addresses or abnormal activities in the DNS resolution will trigger an alert in the monitoring system and will lead to further investigation in accordance with the applicant's anti-abuse policies.

In addition, paragraph 28 of the application forms part of the PIC submitted by the applicant.

As described in 28.1.3 of the application, the applicant will establish the following anti-abuse mechanisms:

- A single point of contact at the 慈善(.charity) gTLD registry for the filing and handling of abuse complaints.
- A team to respond to reports of malicious conduct.
- All accredited registrars and resellers will be required to set up a liaison with the registry for abuse mitigation.

Paragraph 28.2 of the application sets out numerous anti-abuse mechanisms including Reserved lists; Access control, ie security processes to be followed on domain name transfers which are designed to prevent hijacking of domain names; Policy on orphan glue records to prevent malicious conduct through abuse of glue records.

Paragraph 28.3 of the application sets out Abuse Mitigation Mechanisms, both for registration abuse (28.3.1) and use abuse (28.3.2).

The registration abuse mechanism will work on a complaint basis (reactive). On receipt of a complaint, the applicant will place the domain on registry lock, and if satisfied that the grounds of complaint are made out, will immediately take down the domain name. Notice of breach will be sent to the registrar and registrant.

The use abuse mitigation mechanism is set out in paragraph 28.3.2. It will involve close cooperation with law enforcement agencies, and result in suspension of domain names associated with harmful activity. Appeal mechanisms will safeguard the fundamental rights of registrants from potential harm, and there is provision for the restoration of domain names within 4 hours of remediation.

Further, paragraph 28.3.4 sets out anti-abuse collaboration with partners, which can be summarised as:

- Partnership with ICANN – prompt implementation of consensus policies.

1-961-6109 Response to GAC Advice

- Partnership with law enforcement and security providers – to identify and take down domain name abuse incidents, subject to appropriate checks and balances to safeguard registrant fundamental rights.

4. Documentation

The applicant is happy to confirm that it will maintain full reports on WHOIS accuracy, security threats and actions taken as a result of periodic checks for the full term of the contracted period and provide the reports to ICANN on request in connection with contractual obligations.

5. Making and handling complaints

The mechanisms are set out in the applicant's response to question 3 above.

6. Consequences

The answers above set out the obligations, processes for reactive and proactive monitoring and the real consequences to both registrars and registrants who are found to be in breach.

The mechanisms described in the application and PIC and summarised above will require substantial resources, and paragraph 28.3.4 of the application sets out appropriate resource plans. Resources include a team of 20 staff at the registry service provider dedicated to reviewing WHOIS accuracy. Senior staff at the applicant and registry services provider have real world experience of implementing similar, proactive data validation and abuse mitigation within the .cn domain.

Consumer protection, sensitive strings and regulated markets

It is emphasised that the regulatory environment for charities within South East Asia in general and China in particular is still emergent. The GAC advice appears to assume that, for example, the charity sector in China is subject to similar or the same regulatory environment as in developed countries. This is not the case.

Nevertheless, the applicant's intention is that the 慈善(.charity) gTLD will fully meet regulatory requirements applicable in the target markets, and, further, will exemplify best practice in industry self-regulation. The application demonstrates the applicant's commitment to data quality and abuse mitigation throughout the domain name lifecycle.

1. Acceptable use policy

The applicant confirms that its acceptable use policy will require registrants to comply with all applicable laws including those that relate to privacy, data collection, consumer protection and disclosure of data (others in the GAC list do not appear to apply to the 慈善(.charity) gTLD). At least two jurisdictions within the target market, Taiwan and Hong Kong, have extensive privacy laws which are modelled on EU Data Protection laws. These will form the basis of the acceptable use policy .

2. Informing registrants of contractual requirements

The applicant confirms that registrars will be required to inform registrants of all relevant contractual requirements at the time of registration.

1-961-6109 Response to GAC Advice

3. Appropriate security measures for sensitive personal data

The applicant confirms that it will require registrants who collect or process sensitive personal data to take appropriate security measures to safeguard individuals' privacy in compliance with applicable laws.

4. Working relationship with relevant regulatory or self-regulatory bodies

As explained above, the regulatory environment for charities in China and the target market for the 慈善(.charity) gTLD is emergent. Therefore we see the 慈善(.charity) gTLD as a mechanism to foster the development of the charitable sector in China and other target markets. The 慈善(.charity) gTLD will establish dialogue with relevant stakeholders eg charities in China, law enforcement, the domain name industry, volunteers or NGOs as the charitable sector develops and matures.

5. Registrant single point of contact for abuse reporting

The applicant confirms that it will require a registrant single point of contact for abuse reporting.

As a practical point, the applicant believes that the rigorous WHOIS data checking and validation throughout the lifecycle of domain names within the 慈善(.charity) gTLD will provide far better, and tested, responsiveness from registrants than exists in established gTLDs.

6. Registrant eligibility verification

The applicant confirms that it will verify and validate each registration application against eligibility criteria to ensure that registrants that hold themselves out as charities through their 慈善(.charity) domain names are authorised or entitled to do so.

7. Consult with supervisory authorities

The applicant confirms that it will consult with relevant national supervisory authorities or their equivalent in case of doubt with regard to the authenticity of licenses or credentials.

8. Periodic post registration checks

As described in the applicant's application and PIC, the applicant will carry out on-going compliance monitoring to detect potential registration or use abuse. In addition, the applicant confirms it will conduct period post-registration checks to ensure registrants' compliance with the eligibility criteria and applicable laws and regulations.

Conclusion

The applicant's objective in founding the 慈善(.charity) gTLD is to provide a trusted and intuitive space for Chinese-speakers to interact with charity. This is an emerging sector within China and other target markets, and therefore the applicant lacks the professional interlocutors that may exist in developed countries.

Building close relationships with relevant stakeholders will ensure that the 慈善(.charity) gTLD crafts policies and monitors implementation in a way that meets and anticipates the needs of customers and other stakeholders in this emerging market.

The track records of senior staff at the 慈善(.charity) gTLD through CNNIC and ICANN demonstrate that the measures proposed in the application are achievable, and that the applicant will not hesitate to make tough decisions – such as the cancellation of a domain name, or the termination of registrar accreditation – where circumstances require.

1-961-6109 Response to GAC Advice

Through the implementation of eligibility criteria for registrants, comprehensive measures to ensure and maintain data quality, and mitigation of harmful registration or use, the applicant is confident that the 慈善(.charity) gTLD meets or exceeds the GAC's safeguard advice in every respect. The applicant is committed to working with all stakeholders, including the GAC, to bring the vision of the 慈善(.charity) gTLD to fruition, as a trusted resource for Chinese-speaking online communities.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, "[Application ID] Response to GAC Advice" (for example "1-111-11111 Response to GAC Advice"). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Phys Biz Pty Ltd
Application ID	1-967-85854
Applied for TLD (string)	.physio

Response:

I wish to comment on the Governmental Advice Committee (GAC) Communiqué from Beijing, 11 April 2013; specifically, the information in Section IV 1 b and Annex I.

The GAC has identified a number of strings and labelled them category 1, on the basis that they "...are likely to invoke a level of implied trust from consumers and carry higher levels of risk associated with consumer harm". Furthermore the GAC has identified some strings within category 1 that need to "...address specific risks and to bring their registry policies in line with arrangements in place offline." The GAC proposed further targeted safeguards for these strings at points numbered 6, 7 and 8, such as

6. verification and validation of registrant's authorisations, charters, licenses and/or other related credentials;
7. consultation with national supervisory authorities in cases of doubt with regard to authenticity of licenses or credentials; and
8. implementation of periodic post-registration checks to ensure registrants validity and compliance.

My applied-for string .physio was listed in the category 1 strings within the health and fitness subgroup. This subgroup group was also identified as one requiring the further targeted safeguards at points 6, 7 and 8. My comments on these points will be restricted to the physiotherapy profession and my experience with physiotherapist and health practitioner regulation in Australia and internationally, however I expect they may be extrapolated across all category 1 strings.

I believe the GAC's proposed additional safeguards are simplistic and have the potential to be impractical and burdensome to the point of impacting upon the viability of the .physio gTLD. Furthermore I propose that there is no evidence to support the GAC's position.

Modern governments have moved to regulate health professionals rather than health professions. That is, they protect the health professional's title, eg. 'physiotherapist', rather than what the health professional does, eg. 'physiotherapy'. Therefore any non-registered person may do 'physiotherapy' but only registered physiotherapists may hold themselves out to be a 'physiotherapist'. Subsequently, in jurisdictions where health regulation is present, in the main, only physiotherapists are registered. Yet the physiotherapy community is broader than just physiotherapists. This is recognised world wide by physiotherapy professional associations that actively encourage membership by students, assistants/aids and affiliates.

The physiotherapy community is also broader than individual persons. Hospitals, clinics, businesses, universities, colleges, associations and a myriad of goods and services industries supply, support and participate within the community. The people working in those organisations are not necessarily physiotherapists, yet they are a valuable part of, and contributor to, the physiotherapy community.

If the GAC advice at points 6, 7 and 8 were to be followed, great parts of the physiotherapy community would be excluded from participation in the .physio gTLD.

Physiotherapists work in jurisdictions with a broad range of regulatory approaches, including government regulation, self regulation, quasi-regulation, co-regulation and no regulation. Verification, consultation and post-registration checks may be impossible to do in some jurisdictions as they may be no "national supervisory authority" with whom to consult. Are these physiotherapists to be excluded?

In contrast, the number of jurisdictions that do have physiotherapist regulation is great, for example, the United States of America and Canada have separate regulatory authorities for every state, province and territory. Communicating with each authority would create costs and delays that would severely diminish the ease with which potential registrants could register their second level domain names; to the point of making the .physio gTLD unviable. Furthermore, as one of nearly 2,000 registries competing for the services of registrars it would be very difficult to be attractive if the safeguards proposed by the GAC were in place.

Finally, to date the term 'physio' has been used, unchecked, in domain names to the left of the dot without any evidence of "...higher levels of risk associated with consumer harm". The GAC is suggesting that by simply shifting the term 'physio' to the right of the dot the risk associated with consumer harm will be increased. I would propose that the development of the .physio gTLD will only reduce the risk of harm because there is now, at least, one checking authority that has a vested interest in maintaining the integrity of the term 'physio'.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Respondent:

Applicant Name	Kanton Zürich (Canton of Zurich)
Application ID	1-968-87792
Applied for TLD (string)	zuerich

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué."

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a Government Body and Public Authority - with rights to the recognized brand "Zürich" (Logo and Claim: "World Class. Swiss Made."), we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLD(s) will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further generally support new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

Respondent:

Applicant Name	dotHIV gemeinnuetziger e.V.
Application ID	1-971-90747
Applied for TLD (string)	HIV

Response:

dotHIV comments on GAC Beijing Communiqué

dotHIV gemeinnuetziger e.V. (dotHIV), an Applicant for the .hiv TLD, is pleased to submit these comments regarding the GAC Communiqué from the Beijing meeting.

dotHIV supports the efforts of ICANN and the Governmental Advisory Committee (GAC) to deploy the new TLD's in a safe, secure and responsible manner, and we respect the GAC's desire for additional protections in certain categories of strings.

However, we believe our application has been erroneously included in the Communiqué's "Category 1: Consumer Protection, Sensitive Strings, and Regulated Markets", sub-category "Health and Fitness." We are specifically concerned this erroneous inclusion in Category 1 might delay the delegation process of dotHIV and therefore kindly request to reconsider this categorization.

As explained in our application, dotHIV will not operate in the Health and Fitness subcategory of Regulated Markets. dotHIV will NOT deliver medical/fitness services of any kind, nor will we offer advice on medical/fitness issues.

Rather, dotHIV is organized as a charity under German law, with a mission to raise both awareness of and funding for the global fight against AIDS. As a designated German charity organization, dotHIV is under the competent jurisdiction of the German government and is required to abide by all the regulations and requirements attendant to registered charity organizations in Germany.

Please allow us to provide some explanatory information on the nature of our application and the organization behind it:

GAC Advice Response Form for Applicants

1. Our application envisions .hiv as a global resource designed to help fight AIDS by tapping the power of both the Internet itself and Internet users. The .hiv TLD registry is designed to serve this social cause and its related affected communities. It's guiding reference in the offline world is the Red AIDS Ribbon, a universal symbol of solidarity that is well understood and accessible around the globe.

2. The .hiv TLD will be an open TLD. .hiv domains are designed as an inclusive and universal tool for online identity for everyone that has affinity for the fight against AIDS - be it by emotion, the nature of their work, involvement in the cause, or simply in solidarity with those afflicted. Eligible registrants include companies, public and civil society organizations, geographic entities, celebrities, activists and others. No nexus or pre-qualification requirements apply; registrants will self select. We conceive ourselves as a means to raise funds and awareness for the global HIV response. As the network of .hiv websites and users grows, dotHIV will have an ever broader and more positive social impact.

3. A key innovation by dotHIV is our built-in micro-donation program, through which dotHIV transfers all economic surplus to HIV project work. The promise to the Internet User: Every visit on a .hiv-website will trigger a small donation and supports an important social cause. Through this innovative model, .hiv domain names will get charged with social identity and directly and tangibly support the fight against AIDS, expand awareness and motivation to act, and provide ALL internet users a means to easily and quickly contribute to the solution of one of the biggest humanitarian challenges of our time. dotHIV has already submitted a Public Interest Commitment (PIC) agreeing to reinvest all excess profits into projects serving the mission of the TLD: to support the global HIV response.

4. dotHIV marketing activities will position .hiv domain names as an innovative tool for AIDS philanthropy and affinity. Over time, .hiv domains will be seen as a key part of an open, online social movement dedicated to eradicating AIDS.

5. dotHIV is supported by a wide range of experts in the many areas needed to ensure the success and social responsibility of the venture. Within the TLD-sphere, we have established long term partnerships with high-quality service providers (including Afiliats, NCC Group, Sedo). To guide our charitable activities, we work closely with leading HIV organizations and members of the affected communities, including an international expert advisory pool and a continuous consultancy relationship with Deutsche AIDS Hilfe e.V., Europe's biggest and leading HIV-related umbrella association.

Given the above, we believe strongly that our application should not be listed in "Category 1: Consumer Protection, Sensitive Strings, and Regulated Markets", sub-category "Health and Fitness." Beyond the requirements of German charities, dotHIV is not operating within a regulated industry, does not offer or provide medical products or services of any kind, and is not associated with fitness products or services. Rather, .hiv is an open TLD dedicated to charitable work that contributes to winning the fight against AIDS, and we believe that no consumers will associate our activities with those of an entity in any regulated space (except charity).

dotHIV understands the need for adequate consumer protections upon the deployment of new TLD's, and we believe our application for the .hiv TLD meets or exceeds ICANN's requirements in

GAC Advice Response Form for Applicants

this area (for details on how we plan to handle abuse, including a dedicated point of contact, and an extensive strategy on reserved sensitive names, see answers to Questions 18(b)(iv) and 28 of our application). Also, dotHIV, in its efforts to provide for a safe and secure online experience of users of the .hiv namespace, liaise with relevant bodies and initiatives promoting the safer use of services of the information society. As a member of eco Verband der deutschen Internetwirtschaft e.V., dotHIV will e.g. participate in eco's tip line taking complaints from the general public about illegal use and content on the Internet, which is part of the INHOPE network.

Given the complex social environments we serve and the importance of AIDS, we take the special responsibility of creating and operating the .hiv namespace very seriously.

Thank you for the opportunity to comment on this important topic.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	Fédération Internationale de Basketball (FIBA)
Application ID	1-994-9184
Applied for TLD (string)	.BASKETBALL

Response:

The Fédération Internationale de Basketball, applicant for .BASKETBALL, appreciates this opportunity to provide comments to the ICANN Board regarding the GAC Advice set forth in the Beijing Communiqué. The recommendation enumerated by the GAC in Section IV(1)(e) – Community Support for Applications recognizes the significance of prioritizing applications that have worldwide community support:

e. Community Support for Applications - The GAC advises the Board: (i) that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

FIBA fully supports the GAC's recommendations and strongly requests adoption by the ICANN Board.

The consideration of community support as a prioritizing factor in the new gTLD process was initially highlighted back in November 2012 through the Early Warning process. Two governments (UK and Greece) issued Early Warnings advising the prioritization of applicants that have their own community world governing body (such as FIBA) and that have demonstrable support from their respective communities over competing applicants with neither the support of nor any affiliation to such community (See GAC Early Warnings – November 21, 2012). These GAC members recognized that these particular community applicants were best-placed, as trusted and respected representatives of their communities, to ensure responsible and measured growth for these new gTLDs. Now the entire GAC agrees that the communities' opinion must play a prominent role in this process, particularly where the string is part of a contention set.

GAC Advice Response Form for Applicants

In our case, FIBA is the world governing body for the sport of basketball, formed by 213 national federations throughout the world. Its mission is to develop and promote the game of basketball as well as unite the global basketball community. Our global basketball community has repeatedly voiced its opinion on multiple fronts throughout this new gTLD process. Through public comments to ICANN, letters to GAC members, and support in the objection process, the basketball community clearly prefers FIBA (as the world governing body) to be the trusted steward of the .BASKETBALL string. Most importantly, the community expressed significant concern and objection to entrusting the competing applicants (with no affiliation to basketball) with the development and growth of this new domain space. Failure to consider these valid concerns and to allow applicants with no community support and in fact, significant opposition to delegation of the string, threatens the integrity of the new gTLD process. It diminishes the importance of the communities' opinions and dissuades current and future world governing bodies from seeking expansion in the new gTLD arena.

FIBA urges the Board to heed the GAC's Advice and strongly consider the communities' recommendations in the new gTLD delegation process.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	IRB Strategic Developments Limited
Application ID	1-994-63638
Applied for TLD (string)	.RUGBY

Response:

The International Rugby Board (IRB), applicant for .RUGBY, appreciates this opportunity to provide comments to the ICANN Board regarding the GAC Advice set forth in the Beijing Communiqué. The recommendation enumerated by the GAC in Section IV(1)(e) – Community Support for Applications recognizes the significance of prioritizing applications that have worldwide community support:

e. Community Support for Applications - The GAC advises the Board: (i) that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

The IRB fully supports the GAC's recommendations and strongly requests adoption by the ICANN Board.

The consideration of community support as a prioritizing factor in the new gTLD process was initially highlighted back in November 2012 through the Early Warning process. Two governments (UK and Greece) issued Early Warnings advising the prioritization of applicants that have their own community world governing body (such as the IRB) and that have demonstrable support from their respective communities over competing applicants with neither the support of nor any affiliation to such community (See GAC Early Warnings – November 21, 2012). These GAC members recognized that these particular community applicants were best-placed, as trusted and respected representatives of their communities, to ensure responsible and measured growth for these new gTLDs. Now the entire GAC agrees that the communities' opinion must play a prominent role in this process, particularly where the string is part of a contention set.

GAC Advice Response Form for Applicants

In our case, the IRB is the world governing body for the sport of rugby, with a membership of 118 national federations and over 5.5 million players worldwide. Our mission is to globally promote the sport of rugby, its development and growth and its social and character building values. Our global rugby community has repeatedly voiced its opinion on multiple fronts throughout this new gTLD process. Through public comments to ICANN, letters to GAC members, and support in the objection process, the rugby community clearly prefers the IRB (as the world governing body) to be the trusted steward of the .RUGBY string. Most importantly, the community expressed significant concern and objection to entrusting the competing applicants (with no affiliation to rugby) with the development and growth of this new domain space. Failure to consider these valid concerns and to allow applicants with no community support and in fact, significant opposition to delegation of the string, threatens the integrity of the new gTLD process. It diminishes the importance of the communities' opinions and dissuades current and future world governing bodies from seeking expansion in the new gTLD arena.

The IRB urges the Board to heed the GAC's Advice and strongly consider the communities' recommendations in the new gTLD delegation process.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	BRS MEDIA, Inc.
Application ID	1-994-75477
Applied for TLD (string)	.radio

Response:

BRS MEDIA, Inc. submitted public interest commitments (PICs) prior to the GAC Beijing Communiqué which address the GAC's concerns regarding abusive activity.

We will have a single point of contact, as discussed in our PICs, as well as community policing and an ombudsperson. There will be a single point of contact for allegations of abuse to be submitted to, making it easy for the community and for law enforcement to have their concerns quickly addressed.

GAC Advice Response Form for Applicants

Respondent:

Applicant Name	SPIEGEL-Verlag Rudolf Augstein GmbH & Co. KG
Application ID	1-997-40034
Applied for TLD (string)	spiegel

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the GAC Beijing Communiqué for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name: **STARTING DOT**
Application ID: **1-1000-94806**
Applied for TLD: **BIO**

Response:

Starting Dot wishes to thank the GAC for its GAC Advice to the Board of Directors of ICANN dated April 11, 2013, and in particular for designing additional Safeguards for new gTLDs. These newly-devised Safeguards seek heightened accountability for those new gTLDs involved for instance with issues of consumer protection and regulated sectors, such as Starting Dot's new gTLD application BIO (the short form ‘bio’ conveying ‘organic food and farming’ in 10 European languages).

The GAC Advice, in Section IV – 1 – b, has issued Safeguard Advice on New gTLDs. The BIO application is included in Annex 1 in the Category 1 list of specific new gTLDs under the Environmental category of new gTLDs, along with the applications EARTH, ECO, GREEN and ORGANIC.

These additional Safeguards advised by the GAC are in line with the thrust behind the Registry Policy of the BIO application to create a safer DNS space as a bridge between the DNS and existing regulations. This Registry Policy has been revised and developed hand-in-hand with the global umbrella organization for organic food and farming IFOAM (International Federation of Organic Agriculture Movements, including over 700 member associations from over 100 countries – www.ifoam.org).

1. BIO: multiple meanings for a single term

BIO is a short form with multiple meanings depending on the language, for instance :

- in English: biography, biology, biochemistry, biofuels, biodegradable, biotechnology and many other forms of life sciences;
- in German, French, Italian, and 7 other European Union languages: organic food and farming (biologische Landwirtschaft; agriculture biologique; agricoltura biologica ...), biology, and many forms of life sciences as mentioned above for English ;
- in Danish: movies.

From March 27 to April 2, DECIPHER Inc., a US based comprehensive market research services firm, has conducted on behalf of Starting Dot a survey on three samples totaling 800 individuals over 18 years of age and representative of the population of the USA, France and Germany, concerning their first understanding of the meaning of the short form 'bio' in either English, German or French.

The table of results (detailed in Appendix 1) shows that the term 'bio' has a different meaning in the USA and in continental Europe. In France and Germany, 'bio' is mostly understood to mean 'organic food and farming'. In the USA, 'bio' mostly relates to 'biology' and 'biography' (70% of respondents), and means 'biotechnology' as first meaning for only 10% of the respondents.

To take into account the diversity of potential uses, the BIO application has taken a practical common sense approach to a polysemantic (i.e. multiple meaning) term and has developed policies accordingly.

2. The BIO new gTLD: a technical resource

Among all the various meanings of the short form 'bio' in many languages, the meaning related to a regulated sector with related consumer protection and environmental issues as stated by the GAC Advice is the meaning of organic food and farming.

The BIO new gTLD is a technical resource providing information, for which Starting Dot as the upcoming registry operator will be responsible for specific, but limited, enforcement policies: registrant eligibility, enforcement of registrar and registrant obligations, security and abuse mitigation. However, the registration, and mainly the use, of a domain is the sole responsibility of the registrant. Specific laws have established safe havens for registry operators relative to domain content (EU Directive, Millenium Act). To such extent, Starting Dot as upcoming registry operator of BIO remains first and foremost a technical resource for the benefit of internet users in order to easily access domains and web sites, via servers, by using easy-to-use names instead of a long series of numbers.

In order to highlight the limited, albeit crucial, enforcement requirement of Starting Dot as upcoming registry operator of the BIO new gTLD, there are currently 847 million webpages containing the keyword 'bio' (search results on a Google request, April 26, 2013) without any specific policy requirements apart from the usual legal and regulatory framework regulating the World Wide Web: this framework includes publisher terms of use referring to national

laws related to communication, information, consumer protection, data privacy and host responsibility and again, laws having established safe havens for registry operators relative to domain content (EU Directive, Millenium Act). Any publisher currently displaying misleading information related to consumer protection (in particular for organic food) could today be the recipient of a lawsuit based on existing regulations that govern illegal material posted on the internet.

The proposed BIO new gTLD is a technical resource for the Internet, allowing website publishers and email users to use specific internet addresses ending with the '.bio' extension.

Therefore, and regarding the organic food and farming regulations, the BIO new gTLD is not disrupting the very efficient set of laws and ethics for online publishers.

3. The Organic Agriculture Movement supports the BIO new gTLD application

The International Federation of Organic Agriculture Movements (IFOAM) is the umbrella organization for the organic sector worldwide. Since 1972, IFOAM has defined, convened, represented, educated, and advocated an organic approach to life for producers, consumers, traders, policy makers, researchers, and communities.

IFOAM is a membership-based organization with over 750 members and representation from over 115 countries, with a respected standing with governments, and partnerships with intergovernmental agencies such as FAO and UNCTAD, among others. IFOAM's work has been the foundational piece of most organic standards and markets worldwide. Its formal positions on policy and governance, science and technology, and ecological and socioeconomic practices have been and continue to be the formative guidance adopted by the organic sector.

Starting Dot, following the GAC Early Warning issued by France and a Public Comment by IFOAM, has substantially interacted with IFOAM over the last six months. This interaction has led to the inclusion of many, if not all, suggestions made by IFOAM in order to define the most appropriate Registry Policy for BIO taking into account both its many meanings and its regulated nature in the food and farming sector. This revision to the Registry Policy was incorporated in a Change Request to the BIO application submitted to ICANN on February 28, 2013 (Appendix 2 – BIO new gTLD Application Change Request). As of May 6, 2013, Starting Dot is expecting the status of this Change Request shortly, for Public Comment.

The support of IFOAM to the BIO application has been communicated on February 5, 2013 via two letters, the first to the GAC and many GAC country members, the second specifically to the European Union members both of the GAC and of the Directorate General for Agriculture (Appendix 3 and 4).

In addition to the support from IFOAM, the BIO application also received the support from two European Parliament members (Appendix 5).

Starting Dot is developing a multi-stakeholder model of the BIO new gTLD self-governance clearly inspired by the ICANN model itself, thanks to the diversity of IFOAM's membership,

as diverse as the organic world itself, including affiliates and action groups representing a wide diversity of constituencies participating in the organic movement:

- 750 Affiliates from 115 countries around the world,
- Strategic Partners like the United Nations UNCTAD, FAO, FiBL, BioFach....,
- Regional bodies (EU, Mediterranean, France, Middle East/North Africa, Asia, Japan, Latin America and Caribbean)
- Sector-specific groups (farmers, aquaculture, amenity agriculture, animal husbandry, science/research, consultants, retailers, trade).

Concerning consumer protection and organic farming applicable laws, Starting Dot has taken into account the concerns of regulators and of IFOAM. Both Starting Dot and IFOAM agree that market claims must be in compliance with all relevant regulations. Controls are already in place by relevant regulatory authorities, and these are continually being improved. IFOAM works closely with governmental bodies in this regard to safeguard the credibility of organic products in the market and to assure ongoing consumer confidence in products and product-based services that carry organic claims.

IFOAM has mechanisms in place to distinguish between credible organic products and related claims, namely through its Organic Guarantee System, (available at www.ifoam.org/about_ifoam/standards/ogs.html) which evaluates and recognizes organic standards/regulations and their respective verification systems. This framework is largely and increasingly inclusive of the regulated organic market and has become the de facto baseline determinant of what is organic in any given regulated market and what is not. That said, not all regulations and standard systems recognize one another; trade barriers still exist. Whether an organic product approved in one market is eligible for sale in another market is an ongoing and evolving question.

Starting Dot, in conjunction with IFOAM, has classified each nation into one of three levels of existing organic regulations (detail attached as Appendix 6):

- Nations with fully implemented regulations (68 nations);
- Nations with finalized regulations but not yet fully implemented (19 nations);
- Nations in the process of drafting regulations (24).

To date, less than half of all nations have fully implemented organic regulations.

The regulation of product flow, when existing, is clearly in the hands of a local, national or regional authority, and its designated agents. In summary, the GAC and ICANN should rest assured that Starting Dot and the BIO gTLD will be a positive support in upholding government regulations about organic products and related consumer protection objectives, through IFOAM's framework and tools, and active participation and oversight by IFOAM and other organic movement participants in the regulation and administration of the BIO gTLD.

However important regulations and certification – and indeed, marketing of organic products in general – are for consumer protection, certification is only a part of the community that identifies itself as organic. IFOAM considers, and Starting Dot has issued a Change Request based on this consideration, that the organic movement, and therefore the registration criteria for the BIO new gTLD, should not be restrictively defined as the addition of or compliance to national or international laws, regulations or standards about products placed on the market. Indeed, not all organic producers choose to market their products as organic,

even if they meet the letter of a relevant regulation or standard. Science and related research, political advocacy, education and awareness raising, consultancies, and informational exchange, among others, are activities common in the organic sector, and these often have nothing directly to do with the marketing of products, yet they are nonetheless vital to the health and progress of the organic movement and its markets.

Finally, certification relates to a given food and farming product, (for instance, apples) and not to a potential registrant, the farmer or farm itself.

With this broader perspective in mind, IFOAM has defined principles for organic agriculture and its value chains globally and, after a three-year multi-stakeholder process, IFOAM and its members finalized in 2005 the Principles of Organic Agriculture, or POA (attached as Appendix 7, and available on line at http://www.ifoam.org/about_ifoam/principles/index.html, currently available in 19 different languages). The POA are core criteria against which IFOAM evaluates the legitimacy of any organic standard or regulation (through the Organic Guarantee System), or for any other activity or entity.

The POA also are the foundation of IFOAM's Best Practice Program, which addresses a full spectrum of sustainability issues and broadens the scope and responsibility of the organic movement and its actors beyond the scope currently covered by existing laws. The Best Practice Program is the leading edge of the organic movement's trajectory going forward and will help guide the organic movement and the adoption of organic practices worldwide as society evolves. ICANN should bear in mind that the organic movement and markets are not static; evolution is relatively rapid. Starting Dot has aligned itself with IFOAM to assure that the credibility and relevance of the BIO gTLD can be maintained for the long term.

Starting Dot's Change Request, specifically in the ELIGIBILITY section of Question 18b iv), therefore states, based on the suggestion by IFOAM, that:

"the intent of Starting Dot is not to replicate existing organic regulations (which differ from country to country). Indeed, this would create unnecessary barriers to participation and would slow down innovation and the flow of information in the .BIO sectors. The intent is to be inclusive of all participants who actively advocate organic principles without necessarily seeking organic certification, and of registrants not related to agriculture, food and farming but related to other meanings of the short-form 'bio'."

In addition, the Change Request requires all registrants to create on the home page of their web site an HTML link to the Principles of Organic Agriculture:

- if the registrant is part of the food and farming sector, the link will indicate 'abiding by the POA';
- if the registrant is not part of the food and farming sector, the link will indicate 'not undermining the POA'.

It is based on this inclusive, yet principle-abiding approach that Starting Dot, together with IFOAM, consider that the BIO new gTLD best serves the public interest by fostering an innovative space for all meanings of the short form BIO, in particular but not only for the organic food and farming sector, by increasing consumer choice and by increasing competition within the TLD sector, while balancing the required safeguards for consumer protection in a regulated market.

4. The BIO new gTLD application is compliant with the GAC Advice

Starting Dot wishes to inform and explain here below why and how the BIO new gTLD application, including its Change Request, is compliant with the Safeguards that the GAC has defined in its Advice.

4.1. Safeguards applicable to, and required for, the BIO application

Of the five Safeguards Advised for new gTLDs included in Category 1 new gTLDs, one does not apply to the BIO application, namely Safeguard #3 which related to sensitive health and financial data.

The further GAC Advice within Category 1 defines three further targeted Safeguards under sub-paragraphs 6, 7 and 8, all of which are applicable to environmental new gTLDs, and therefore to the BIO application.

We will therefore respond to the seven Safeguards applicable to the BIO application, i.e. Safeguards 1, 2, and 4 through 8.

4.2. Compliance with Safeguards applicable to, and required for, the BIO application

Safeguard #1 - Compliance with applicable laws

Of the list of eight applicable laws for which compliance is required for new gTLDs in Category 1, we consider that only two are applicable to BIO, namely consumer protection and organic farming. The six other types of applicable laws (privacy, data collection, fair lending, debt collection, disclosure of data, and financial disclosures) are specific to other sectors such as finance and banking.

The BIO new gTLD application, both in its initial response to Question 18b iv) and in its Change Request to Question 18, clearly states in the ILLEGAL USE AND COMPLIANCE section that:

“When registering a secondary domain name in the .BIO TLD, it is of the registrant’s responsibility to be compliant with the applicable existing national and international regulations, if any. Use of a domain name that is barred or prohibited by law or legal proceeding in any jurisdiction, or is considered to be defamatory or does not meet the eligibility criteria, will permit Starting Dot to revoke the domain name. Policies to this end will be developed by the registry and published in due time prior to the Sunrise.”

Starting Dot will detail in the BIO new gTLD Registrant Terms and Conditions as part of the Registry Agreement (RA) the specific requirements for registrants of a .BIO domain name to comply with their national laws regarding consumer information, consumer protection and organic labeling.

With these policies, Starting Dot considers that it is in compliance with Safeguard #1.

Safeguard #2 – Registry to require that registrars notify registrants of required compliance with applicable laws

Starting Dot intends to accredit a limited number of registrars who will agree to focus on the multiple markets for BIO while abiding by its strict Registry Policy, via a strict Registry Registrar Agreement and with specific Registrant terms and conditions.

Registrars will be required, as part of the Registry Registrar Agreement of the BIO new gTLD, to abide by a registration procedure with mandatory opt-in of registrants to BIO-specific Registrant Terms and Conditions. The Terms and Conditions will be highlighted in a 50-100 word display located just above the validation link on the registration page. The display will inform every registrant of BIO Registry Policy's key elements, with a clickable link to the full Registry Policy and Terms and Conditions, including the requirement of the mandatory HTML link to the POA as described above.

With these policies, Starting Dot considers that it is in compliance with Safeguard #2.

Safeguard #4 – Establish a working relationship with relevant regulatory or industry self-regulatory bodies.

Starting Dot has agreed with IFOAM that IFOAM will participate in the BIO Registry Policy development and implementation. IFOAM defines itself as the only international umbrella organization of the organic world and is therefore the unchallenged self-regulatory body for organic agriculture. IFOAM has ongoing connections to and collaboration with governmental bodies worldwide for the promotion and quality assurance of organic production and markets. As just two small but recent examples, IFOAM's Executive Director gave testimony to the EU Commission in Brussels in late 2012 regarding the revision of the EU organic regulations, and a member of the IFOAM Standards Committee gave testimony in March 2013 at the USDA National Organic Standards Board meeting regarding a globally harmonized technical approach to specific production methods.

IFOAM and Starting Dot have signed an agreement dated March 1, 2013 detailing a mutually beneficial collaboration for the appropriate community use and profitable management of the BIO new gTLD. The agreement highlights IFOAM participation as Chair and nomination authority for the BIO new gTLD Policy Advisory Committee ("PAC"). The role of the PAC is to advise Starting Dot management on the BIO new gTLD Registry Policy, its supervision and evolution.

In addition, Starting Dot has developed specific policies (Appendix 2 – BIO Application Change Request, Question 18b iv) in order to mitigate as much as possible the risks of fraudulent and other illegal activities, including:

- i. Producing an extended list of:
 - a. prohibited names, as detailed in Appendix 2 - Change Request Question 18b iv) under the PROHIBITED NAMES section;
 - b. reserved names, including a substantial expansion on Geographical Indications. Domain names related to Geographical Indications (GI) will be protected

and blocked at no cost for the exclusive use by the relevant GI. A procedure will be defined so that the relevant GI may take possession of its domain. A list of these GIs, as well as the details of the procedure, will be communicated before Sunrise to registrars;

ii. Establishing strong enforcement procedures, as defined in Appendix 2 – Change Request Question 18b iv) under the ENFORCEMENT section.

Starting Dot has also established a working relationship with:

- The European Union Directorate General for Agriculture (meetings held on September 11, 2012 and on November 29, 2012) and the European Union GAC;
- Certain members of the European Parliament.

With these policies, Starting Dot considers that it is in compliance with Safeguard #4.

Safeguard #5 – Single point of contact for registrants, and information of relevant regulatory bodies in their main place of business

Starting Dot will enforce the two-tiered Safeguard #5 in the following ways:

Single Point of Contact (SPOC) for registrant: the Terms and Conditions of the BIO new gTLD registration will inform registrants that the Administrative Contact, provided by the registrant, will also be considered as the SPOC for complaints or reports of registration abuse.

This Registrant SPOC will undergo several verification steps, including via:

- a thick WHOIS requirement (response to question 18 of the BIO new gTLD application);
- the 2013 Registry Registrar Agreement (RRA) requiring registrars to verify telephone number and email accuracy;
- the standard verification process of the BIO new gTLD as detailed in response to Safeguard #6 below, i.e. verification of all live web sites typically within three months, as described in response to Question 18 of the Change Request. At the same time, the Registrant SPOC information will be verified.

In case the Registrant SPOC cannot be verified, the domain will be put on hold until full and adequate resolution.

Applicability of requirement that registrant submit information on relevant regulatory body: Starting Dot considers, based on its registry policy which is based on the POA and not on specific local, national or regional regulations, and based on the reasons why it has chosen such a registry policy as described in detail in Section 3 above, that it is not required to seek from registrants the name of the relevant regulatory, or industry self-regulatory body(ies), in their main place of business.

Furthermore, as detailed in answer to BIO application Q18, ENFORCEMENT section, a Single point of contact (SPOC) will be made available for complaints on the official registry operator web site for the BIO new gTLD. A copy of all complaint messages will be forwarded

to a designated IFOAM representative member of the BIO Policy Advisory Committee, for further information of the relevant regulatory body of the Organic Movement.

In addition :

- issues of abuse prevention and mitigation are more specifically and further addressed by the BIO new gTLD application in response to Question 28 (Appendix 8).
- Starting Dot, with the assistance of IFOAM, will provide to Registrants a permanent link to an up-to-date page of a directory of all major regional or national regulatory and/or self-regulatory bodies for any complaint regarding misuse of the .BIO new gTLD.

With such action plan and commitments, Starting Dot considers that it is in compliance with Safeguard #5.

Safeguard #6 - Registrant eligibility validation and control

As mentioned and discussed in section 3 above, as there is no unified and unique global organic set of standards, IFOAM has sought that registrants be included and accepted based on their positive reference to the POA (abidance to POA in the case of registrants in the food and farming sector; not undermining POA for other sectors), and not on specific authorizations, charters, licenses or credentials.

Nonetheless, the ENFORCEMENT section of Appendix 2 – BIO new gTLD Change Request, Question 18b iv) details the policies in place to validate and control registrant eligibility:

The .BIO domain name registration policies contain the following enforcement procedures and processes, in addition to those procedures that have been established in accordance with Consensus Policies such as the UDRS and the URS.

In principle, all new .BIO secondary domain name registrants will be verified within 1 to 3 months following the creation of a live web site operated under the registered secondary domain name. Starting Dot will verify whether a registrant is in compliance with the registry operator's policies on the basis of public information, such as the information displayed on the registrant's website, as well as other sources (Internet, public registries).

When a registrant, based on the information displayed on its website and/or its identity, is clearly not in compliance with the registry operator's policies, the registry operator will put the domain name on hold, and inform both the registrant and the registrar.

Furthermore, Starting Dot's publicly available Complaints Point of Contact will handle any complaints in relation to a .BIO secondary domain name registration, including where the complainant alleges that a particular registrant is not in compliance with the registry operator's policies.

If, following the investigation of a complaint or an ex officio review of the registrant's compliance with the registry operator's policies, no or insufficient proof is provided by the registrant that all policy requirements have been complied with, Starting Dot shall be entitled to put the domain name on hold or to revoke the domain name. Furthermore, Starting Dot

may inform the public that the domain name has been previously used contrary to its registration policies, and mention the name of the related registrant.

With these policies, Starting Dot considers that it is in compliance with Safeguard #6.

Safeguard #7 – Doubtful registrations

As mentioned and discussed in Section 3 above, as there is no unified and unique global organic set of standards, IFOAM has sought that registrants be included and accepted based on their positive reference to the POA, and not on specific licenses, credentials or authorizations. The verification of such positive reference to the POA is detailed above in response to Safeguard #6.

With these policies developed hand-in-hand with IFOAM, Starting Dot considers that it is in compliance with Safeguard #7.

Safeguard #8 - Periodic post-registration checks

Starting Dot is an accountable new gTLD applicant very concerned with quality, compliance, safety controls and verification processes. In addition to the initial post-registration checks described in response to Safeguard #6 above, Starting Dot hereby commits to an annual verification of 10% of all domain names registered under the BIO new gTLD. The annual verification process will be defined in conjunction with the Policy Advisory Committee in order to ensure the highest degree of relevant targeting of the verification process.

With such action plan and commitments, Starting Dot considers that it is in compliance with Safeguard #8.

With its replies above to Safeguards 1, 2 and 4 through 8, Starting Dot hopes and considers that it has appropriately responded to the GAC Advice of April 11, 2013.

5. Starting Dot commitments with GAC Safeguards regarding BIO

On February 5, 2013, in response to advice provided in the Toronto GAC Communiqué dated October 12, 2012, the New gTLD Program Board Committee approved a public comment period on a proposed "Public Interest Commitments Specification" as a mechanism to transform application statements into binding contractual commitments, as well as to give applicants the opportunity to voluntarily submit to heightened public interest commitments.

Starting Dot hereby commits to file a Public Interest Commitments Specification (PIC) covering all the policy commitments described above in order to satisfy the required Safeguards asked by the GAC.

Starting Dot will file this PIC once Starting Dot reviews all public comments issued on this response to the GAC Advice and the public comment period is over, and in any case prior to starting to work with ICANN on the BIO new gTLD Registry Agreement in order to include this PIC into Specification 11.

List of Appendices

Appendix 1: Results of Market Survey by Decipher concerning first perceived meaning of the short form 'bio'

Appendix 2: BIO new gTLD Change Request

Appendix 3: Support letter to the BIO new gTLD application sent by IFOAM to the GAC

Appendix 4: Support letter to the BIO new gTLD application sent by IFOAM to the EU GAC members and the EU Directorate General for Agriculture

Appendix 5: Support letters to the BIO new gTLD application from two European Parliament Members

Appendix 6: List of Nations by existing levels of organic regulation

Appendix 7: Principles of Organic Agriculture

Appendix 8: BIO new gTLD Response to Question 28

APPENDIX 1 - Results of Market Survey by Decipher concerning first perceived meaning of the short form 'bio'

From March 27 to April 2, DECIPHER Inc., a US based comprehensive market research services firm, has conducted on behalf of Starting Dot a survey on three samples of individuals aged over 18 and representative of the entire national population of the USA, France and Germany.

The question was : « **According to you, among the following choices, which is closest in meaning to "bio"?** ». The question and the choices were translated into French and German for respectively France and Germany.

Sample size: 852 unique individuals (USA : 418, France : 213, Germany : 221).

The table of results displayed here below shows that the term « bio » has a totally different meanings in the USA and in continental Europe. France and Germany have a cumulated population of 140 m and represent together 50% of the European Union total population. In those countries, « bio » is clearly the term to mean « organic food and farming » and doesn't at all means « biotechnology ». In the USA, « bio » mostly relates to « biology » and « biography » (70% of respondents), and means « biotechnology » as first meaning for only 10% of the respondents.

	Total	US	France	Germany
Total	N=852	N=418	N=213	N=221
organic farming	21%	2%	46%	31%
organic products	23%	5%	43%	38%
biology	26%	41%	5%	19%
biography	17%	30%	0%	9%
biotechnology	6%	11%	0%	1%
biodegradable	4%	8%	1%	0%
biodiversity	3%	3%	4%	2%

About Decipher: A marketing research services provider, Decipher specializes in online survey programming, sampling, data collection and data reporting. Utilizing proprietary Web-based applications, Decipher integrates state-of-the-art technology with traditional research techniques. Decipher is all about uncovering opportunities in whatever territory is explored with clients. As a true partner, Decipher isn't interested in just data, but also about what that data represents for each client. The company focuses on technology and research systems that bring data to life, and in doing so, helps reveal how even seemingly small discoveries can yield meaningful insights. <http://www.decipherinc.com>

Appendix 2: BIO new gTLD Application Change Request of Q18b

String: bio

Application ID: 1-1000-94806

Answer to Q18b Changed v2

18(b). How proposed gTLD will benefit registrants, Internet users, and others

i) General goals

The goal of the .BIO TLD is to increase consumer trust with a dedicated space, promote free and healthy competition, deliver more consumer choice and offer businesses, organizations, individuals and the advocates the ability to expand their reach.

The .BIO TLD will add a layer of user and navigational simplicity across the communities involved in the organic sector or in life sciences or other areas related to 'bio', bringing participants, organizations, institutions, corporations and brands closer together.

As shown by Google AdWords Keyword Tool statistics (January 2013 monthly million requests on Google), there is strong interest in all 'bio'-related online content:

- 46 m for 'bio';
- 37 m for 'biography';
- 9.1 m for 'organic';
- 7.5 m for 'biology';
- 1.8 m for 'biotech'.

Starting Dot is therefore confident that .BIO TLD will gain rapid international acceptance and recognition.

ii) How .BIO adds to the current TLD space

As stated above, the word 'bio' covers many different topics and areas, in particular the organic agriculture and life sciences. The .BIO TLD intends to serve all of these topics and areas, while ensuring that both POA and national and international organic standards are respected.

A majority of producers, wholesalers, processors and distributors in the organic sector are small businesses. Accordingly, the internet is the most valuable tool they have

to showcase their products and services and a very valuable tool to go to market.

The .BIO TLD will serve as a unique source of information on multiple 'bio'-related sectors, while ensuring that these contents are provided by organizations and individuals which comply with or do not undermine the POA.

Starting Dot has identified at least 300,000 organizations that are eligible to register a domain name under .BIO TLD and expects to achieve a market penetration of 5% to 10% after 3 years of operation of the proposed gTLD.

iii) Goals of .BIO TLD in terms of user experience

The main benefit to registrants of a secondary domain name in the .BIO TLD is that they will be able to develop identities clearly associated to their underlying sectors, areas of interest or industries.

However, for the organic sector, credibility on the internet is extremely important, just as it is in the real life. Indeed, consumers buy organic products because they can rely on the fact that the products have been produced or transformed consistent with the organic agriculture principles. The adoption of these principles will create a safer and more reliable TLD and will promote internet usage and technology adoption within the organic sector.

Ultimately, all sectors and areas of interest covered by the term 'bio' will benefit from .BIO TLD as it has the potential to:

- Promote collaboration and networking within each area.
- Provide worldwide exposure for registrants.
- Provide a fresh set of domain names that are available for registration.

The .BIO TLD will deliver a trusted, safer and more relevant user experience to users searching for information on any forms of 'bio'-related products, services or marketplaces, and therefore better search results.

iv) .BIO intended registration policies

In operating the .BIO TLD, Starting Dot intends to implement all current and future ICANN policies. Accordingly, Starting Dot will follow, among others, ICANN's policies with respect to dispute resolution, including the adoption of the Uniform

Dispute Resolution Policy (UDRS) and Uniform Rapid Suspension (URS), as the same may be amended from time to time.

Domain names related to Geographical Indications (GI) will be protected and blocked at no cost to the relevant governments and/or public authorities, before the TLD is introduced, so that no parties may apply for them. A procedure will be defined so that governments can request the GIs-related domain(s) if they would like to take possession of them. A list of those names will be communicated before Sunrise to registrars.

ELIGIBILITY

.BIO will be an open TLD, generally available to all registrants (except during the Sunrise period; and in accordance with Sections a) and b) below).

Several national and international regulations have defined the 'bio' term as a label displayed on product packaging to identify certified organic products. However, the organic movement is not limited to certification standards and is based on core organic agriculture principles, which have been formulated by the International Federation of Organic Agriculture Movements ("IFOAM"). As stated above, IFOAM's Principles of Organic Agriculture ("POA") serve to inspire the organic movement in its full diversity and to guide the development of positions, programs and standards in the organic community.

Because the .BIO TLD combines one sector governed by the POA, and many other sectors not directly related to organic agriculture, the eligibility criteria for the .BIO TLD will be as follow:

a) Producers, transformers and retailers involved in the field of agriculture, food and farming will be required upon registration to i) commit to abiding by the POA, ii) copy and paste on their website homepage a statement of such commitment (or a relevant graphic or visual label) as proposed by the applicant, with a permanent html link to a web page describing the POA and the eligibility requirements of the .BIO TLD.

b) All other registrants will be required upon registration to commit to not undermine the POA.

The intent of Starting Dot is not to replicate existing organic regulations (which differ from country to country). Indeed, this would create unnecessary barriers to participation and would slow down innovation and the flow of information in the .BIO sectors. The intent is to be inclusive of all participants who actively advocate organic principles

without necessarily seeking organic certification, and of registrants not related to agriculture, food and farming but related to other meanings of the short-form 'bio'.

The applicant is currently devising clear policies together with IFOAM in a way that will benefit the interests of the organic movement, without unduly restricting registration of eligible registrants outside the agriculture, food and farming sectors. IFOAM is setting up with the applicant a Policy Advisory Committee (PAC), in which representatives of the organic movements and of other 'bio'-related areas can, together with representatives of the registry operator, develop new policies in relation to the operation of the .BIO TLD and formulate recommendations.

Starting Dot has also defined a list of reserved and prohibited domain names under the .BIO TLD. Reserved names are secondary domain names reserved for special use or for special organizations. Prohibited names are names that may not be registered under the .BIO TLD.

RESERVED NAMES

Starting Dot will comply with restrictions on registration of character strings set forth in Specification 5 of the Registry Operator Agreement.

Starting Dot also intends to define and operate a list of domain names that have a value for all communities covered by the word 'bio', in order to subsequently delegate them to those registrants who are committing to use these names in order to support communities for which .BIO TLD is initially intended.

Hence, one character labels and a list of generic names will be reserved by Starting Dot and released at its sole discretion.

PROHIBITED NAMES

The list of prohibited names under .BIO TLD includes, in particular:

- Abusive, racist, obscene terms.
- Terms relating to crime or offenses.
- Terms in clear violation of the POA (for instance names related to human rights abuses, GMO, fertilizers, pesticides...).

The list of prohibited names will be made available to registrars prior to Sunrise.

THIRD-LEVEL NAMES

Although Starting Dot does not currently intend to allow third-level name registrations under the .BIO TLD, it may, on a case by case basis or upon specific request from a community representative of a portion of the short-form 'bio' community, create specific secondary domain names for registration of third-level domain names.

ILLEGAL USE AND COMPLIANCE

When registering a secondary domain name in the .BIO TLD, it is of the registrant's responsibility to be compliant with the applicable existing national and international regulations, if any.

Use of a domain name that is barred or prohibited by law or legal proceeding in any jurisdiction, or is considered to be defamatory or does not meet the eligibility criteria, will permit Starting Dot to revoke the domain name. Policies to this end will be developed by the registry and published in due time prior to the Sunrise.

ENFORCEMENT

The .BIO domain name registration policies will contain the following enforcement procedures and processes, in addition to those procedures that have been established in accordance with Consensus Policies such as the UDRS and the URS.

In principle, all the new .BIO secondary domain name registrants will be verified within 1 to 3 months following the creation of a live web site operated under the registered secondary domain name. Starting Dot will verify whether a registrant is in compliance with the registry operator's policies on the basis of public information, such as the information displayed on the registrant's website, as well as other sources (Internet, public registries).

When a registrant, based on the information displayed on its website and/or its identity, is clearly not in compliance with the registry operator's policies, the registry operator will put the domain name on hold, and inform both the registrant and the registrar.

Furthermore, Starting Dot's publicly-available Complaints Point of Contact will handle any complaints in relation to a .BIO secondary domain name registration, including where the complainant alleges that a particular registrant is not in compliance with the registry operator's policies.

If, following the investigation of a complaint or an ex officio review of the registrant's compliance with the

registry operator's policies, no or insufficient proof is provided by the registrant that all policy requirements have been complied with, Starting Dot shall be entitled to put the domain name on hold or to revoke the domain name. Furthermore, Starting Dot may inform the public that the domain name has been previously used contrary to its registration policies, and mention the name of the related registrant.

Dear People,

The International Federation of Organic Agriculture Movements (IFOAM) is the umbrella organization for the organic sector worldwide. Since 1972, IFOAM has defined, convened, represented, educated, and advocated an organic approach to life on planet Earth for producers, consumers, traders, policy makers, researchers, and communities. We are a membership-based organization with over 750 members and representation from over 115 countries, with a respected standing with governments, and partnerships with intergovernmental agencies such as FAO and UNCTAD, among others. IFOAM's work has been the foundational piece of most organic standards and markets worldwide. Our formal positions on policy and governance, science and technology, and ecological and socioeconomic practices have been and continue to be the formative guidance adopted by the organic sector.

Our organization previously submitted comments about the application to ICANN by Starting Dot for the ownership of the global Top Level Domain (gTLD) .BIO. We hereby rescind those previous comments in light of new information that has come to us about this application based on significant interaction and meetings with Starting Dot. Our

position has changed to one of positive support for Starting Dot and its application for the .BIO gTLD. (We would respectfully reiterate that the term "BIO" refers to organic production in ten languages and over fifty countries.)

In response to the concerns we raised against their application, Starting Dot proactively engaged with IFOAM to explain its intentions, approach, and concrete implementation plans for administration, oversight, and control of the .bio gTLD. We have been suitably impressed and moved by their sincerity of purpose, cooperative spirit, and pragmatic approach for making this new gTLD a space that can provide enormous opportunity to the organic sector.

Our concerns about the potential ambiguity of registrants' activities or the messages they might convey through use of a .BIO string have been put to rest by Starting Dot's explanation of its initial registration policy and the related control and public feedback mechanisms they plan to implement upon launch and subsequent management of the .BIO gTLD. In addition, Starting Dot has listened to our concerns and comments and has thereby improved on its initial registry policy. We feel these policies, controls and mechanisms are straightforward, practical to execute, allow for enough flexibility to enable growth of the string, and will ensure the credibility of those entities associating with the .BIO gTLD.

Starting Dot's model appears well suited to the task; this is further reflected by endorsements Starting Dot has received for their three other gTLD applications of .ARCHI, .IMMO, and .SKI - all of which have gained strong support from their respective sectors and national and global trade federations. IFOAM, as the global organization for the organic movement, hereby endorses the Starting Dot application for .BIO in an equal fashion.

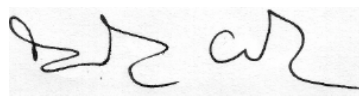

As IFOAM has continued to investigate the general topic of gTLD's related to our scope of activities, we find the Starting Dot application and approach to be the best suited to serve our objectives. This is much in contrast to the application for .ORGANIC, to which we hereby repeat our opposition, as that unrestricted registry policy application does nothing to allay our fears about the potential for ambiguous, abusive, or insincere attempts to capitalize on the hard-earned achievements of the organic movement. Despite our opposition comment in September 2012 to .ORGANIC, we have not heard from its applicant.

We stay available for further exchange on this topic.

Regards,

Markus Arbenz

**Appendix 5: Support letters to the BIO new gTLD application from
two European Parliament Members**

PARLEMENT EUROPÉEN

Françoise GROSSETÊTE

Députée au Parlement Européen

Conseillère régionale de Rhône-Alpes

Brussels, February 18th 2013

Réf:03/12/2012 FXV

Dear Commissioner Ciolos,

We have become aware of the 'new gTLD' program (i.e. new names for internet extensions) launched by the non-profit international organization called ICANN, which will substantially increase consumer choice in terms of internet domain names.

We would like to be informed of the opinion of DG Agriculture and Rural Development, both on an overall basis and specifically concerning the .BIO new generic top-level domain (TLD) application.

We have met with the applicant to .BIO and would like to share with you our strong support for this application. A majority of producers, processors and distributors in the organic sector are small entities. Accordingly, the internet is a very valuable tool to showcase organic products as well as related news and information. The .BIO TLD will also serve as a unique source of information on multiple 'bio'-related sectors, while ensuring that these contents are provided by organizations or individuals which comply with, or do not undermine, the principles of organic agriculture. We also welcome the fact that the .BIO application is developed by an applicant from the European Union, in a sector largely dominated by American interests.

In addition, we have understood a few key elements of this application:

- 1) The applicant has decided to define a Registry Policy for .BIO in collaboration with the International Federation of Organic Agricultural Movements (IFOAM), based in Bonn, Germany, in compliance with the Principles of Organic Agriculture (POA) formulated by IFOAM in 2005 (the two organizations are currently working on a dedicated agreement).
- 2) As the word 'bio' has many different meanings in various languages (from cinema in Danish to biography, biology and biotechnology in many languages), we consider that it is important that no single community be able to derail the .BIO application from being granted to the applicant. In particular, we have been informed that the Biotech Industry Organization (BIO, a global lobby advocating for biotech) is considering opposing this application. We trust that, should this association seek to object to the .BIO application, the EC will rightly argue, and prevail therein, that 'bio' is a generic term for the use of

PARLEMENT EUROPEEN - rue Wiertz -1047 BRUXELLES - Tél.+ 322 - 284 79 52 - Fax.+ 322 - 284 99 52

Assistants : F-X. VAUCHELLE - T. De LARY - M. LEFRANÇOIS

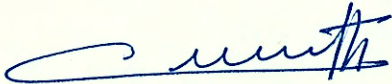

francoise.grossetete@europarl.europa.eu / www.francoise-grossetete.com

many communities – as long as they are in agreement with, or at a minimum do not undermine, the principles of the organic movement.

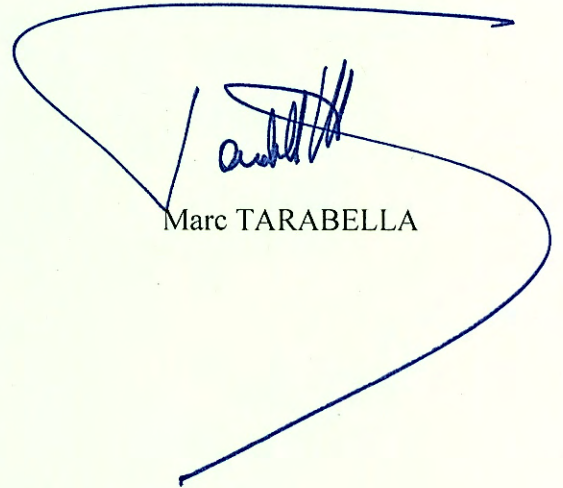

- 3) The intent of the .BIO application is not to replicate existing organic regulations (which by the way differ from country to country), because it would create unnecessary barriers to participation, would slow down innovation and the flow of information. The intent is to be inclusive of all participants who actively advocate organic principles without necessarily seeking organic certification and for registrants not directly related to agriculture, food and farming

Would you please inform us of your position on those issues.

Yours sincerely;

Françoise GROSSETETE

Marc TARABELLA

Appendix 6: List of Nations by existing levels of organic regulation

Disclaimer: The information contained herein is correct to the best of Starting Dot's knowledge. Starting Dot assumes no liability for any party's use of this data.

The above categories are a simplified listing of what in reality is a more complex situation. Countries may have a finalized enabling law without having developed the rules for implementation. In some cases the law has defined detailed standards while in others it sets out only guidelines, with the establishment of the standards and system for approval of certification bodies left to the administration. In other countries a national standard has been developed and finalized before the passage of any law. In one country the government has implemented a regulatory system based entirely on administrative measures rather than the law.

Countries with fully implemented organic agriculture regulations	Countries with finalized organic agriculture regulations not yet fully implemented	Countries in the process of drafting organic agriculture regulations
Albania Argentina Armenia Australia (only for export) Austria Belgium Bolivia Brazil Bulgaria Canada Chile China Colombia Costa Rica Croatia Cyprus Czech Republic Denmark Dominican Republic Ecuador Estonia Finland France Georgia Germany Greece Guatemala Honduras Hungary Iceland India Indonesia Ireland Israel Italy Japan Latvia Lithuania Luxembourg Macedonia Malaysia Malta Mexico Moldova Montenegro Netherlands New Zealand (only for export) Nicaragua Norway Panama Peru Philippines Poland Portugal Romania Saudi Arabia Serbia Slovakia South Korea Spain Sweden Switzerland Taiwan Thailand Tunisia Turkey United Kingdom USA	Azerbaijan Bahrain Bhutan Cuba El Salvador Ethiopia Iran Jordan Kosovo Kuwait Lebanon Morocco New Caledonia Oman Paraguay Qatar United Arab Emirates Uruguay Venezuela	Bangladesh Bosnia and Herzegovina Burundi Egypt Hong Kong Jamaica Kenya Kyrgyzstan Laos Nepal Pakistan Russia Rwanda Senegal South Africa Sri Lanka St. Lucia Syria Tanzania Uganda Ukraine Vietnam Zambia Zimbabwe

Appendix 7: Principles of Organic Agriculture

PRINCIPLES *of* ORGANIC AGRICULTURE PREAMBLE

These Principles are the roots from which organic agriculture grows and develops. They express the contribution that organic agriculture can make to the world, and a vision to improve all agriculture in a global context.

Agriculture is one of humankind's most basic activities because all people need to nourish themselves daily. History, culture and community values are embedded in agriculture. The Principles apply to agriculture in the broadest sense, including the way

people tend soils, water, plants and animals in order to produce, prepare and distribute food and other goods. They concern the way people interact with living landscapes, relate to one another and shape the legacy of future generations.

The Principles of Organic Agriculture serve to inspire the organic movement in its full diversity. They guide IFOAM's development of positions, programs and standards. Furthermore, they are presented with a vision of their world-wide adoption.

Organic Agriculture

is based on: ***The principle of health***

The principle of ecology

The principle of fairness

The principle of care

Each principle is articulated through a statement followed by an explanation. The principles are to be used as a whole. They are composed as ethical principles to inspire action.

Principle of **HEALTH**

Organic Agriculture should sustain and enhance the health of soil, plant, animal, human and planet as one and indivisible.

This principle points out that the health of individuals and communities cannot be separated from the health of ecosystems - healthy soils produce healthy crops that foster the health of animals and people.

Health is the wholeness and integrity of living systems. It is not simply the absence of illness, but the maintenance of physical, mental, social and ecological well-being. Immunity, resilience and regeneration are key characteristics of health.

The role of organic agriculture, whether in farming, processing, distribution, or consumption, is to sustain and enhance the health of ecosystems and organisms from the smallest in the soil to human beings. In particular, organic agriculture is intended to produce high quality, nutritious food that contributes to preventive health care and well-being. In view of this it should avoid the use of fertilizers, pesticides, animal drugs and food additives that may have adverse health effects.

Principle of **ECOLOGY**

Organic Agriculture should be based on living ecological systems and cycles, work with them, emulate them and help sustain them.

This principle roots organic agriculture within living ecological systems. It states that production is to be based on ecological processes, and recycling. Nourishment and well-being are achieved through the ecology of the specific production environment. For example, in the case of crops this is the living soil; for animals it is the farm ecosystem; for fish and marine organisms, the aquatic environment.

Organic farming, pastoral and wild harvest systems should fit the cycles and ecological balances in nature. These cycles are universal but their operation is site-specific. Organic management must be adapted to local conditions, ecology, culture and scale. Inputs should be reduced by reuse, recycling and efficient management of materials and energy in order to maintain and improve environmental quality and conserve resources.

Organic agriculture should attain ecological balance through the design of farming systems, establishment of habitats and maintenance of genetic and agricultural diversity. Those who produce, process, trade, or consume organic products should protect and benefit the common environment including landscapes, climate, habitats, biodiversity, air and water.

Principle of **FAIRNESS**

Organic Agriculture should build on relationships that ensure fairness with regard to the common environment and life opportunities.

Fairness is characterized by equity, respect, justice and stewardship of the shared world, both among people and in their relations to other living beings.

This principle emphasizes that those involved in organic agriculture should conduct human relationships in a manner that ensures fairness at all levels and to all parties – farmers, workers, processors, distributors, traders and consumers. Organic agriculture should provide everyone involved with a good quality of life, and contribute to food sovereignty and reduction of poverty. It aims to produce a sufficient supply of good quality food and other products.

This principle insists that animals should be provided with the conditions and opportunities of life that accord with their physiology, natural behavior and well-being.

Natural and environmental resources that are used for production and consumption should be managed in a way that is socially and ecologically just and should be held in trust for future generations. Fairness requires systems of production, distribution and trade that are open and equitable and account for real environmental and social costs.

Principle of **CARE**

Organic Agriculture should be managed in a precautionary and responsible manner to protect the health and well-being of current and future generations and the environment.

Organic agriculture is a living and dynamic system that responds to internal and external demands and conditions. Practitioners of organic agriculture can enhance efficiency and increase productivity, but this should not be at the risk of jeopardizing health and well-being. Consequently, new technologies need to be assessed and existing methods reviewed. Given the incomplete understanding of ecosystems and agriculture, care must be taken.

This principle states that precaution and responsibility are the key concerns in management, development and technology choices in organic agriculture. Science is necessary to ensure that organic agriculture is healthy, safe and ecologically sound. However, scientific knowledge alone is not sufficient. Practical experience, accumulated wisdom and traditional and indigenous knowledge offer valid solutions, tested by time. Organic agriculture should prevent significant risks by adopting appropriate technologies and rejecting unpredictable ones, such as genetic engineering. Decisions should reflect the values and needs of all who might be affected, through transparent and participatory processes.

INTERNATIONAL FEDERATION OF
ORGANIC AGRICULTURE MOVEMENTS

IFOAM'S MISSION IS LEADING,
UNITING AND ASSISTING THE
ORGANIC MOVEMENT IN ITS FULL
DIVERSITY.

OUR GOAL IS THE WORLDWIDE
ADOPTION OF ECOLOGICALLY,
SOCIALY AND ECONOMICALLY
SOUND SYSTEMS THAT ARE BASED
ON THE PRINCIPLES OF ORGANIC
AGRICULTURE.

Appendix 8: BIO new gTLD Response to Question 28

Question 28: Concerns on Abuse Prevention and Mitigation

The Applicant's proposed use for the .bio gTLD will include robust protection mechanisms designed to preclude any abusive registrations within the space.

Accordingly, the Applicant will adopt a comprehensive system including the screening of second-level domain name strings and ongoing monitoring for appropriate use of websites active within the space. Furthermore, the Internal Domain Use/Registration Policy as described in Question 18 above will ensure a high level of security for the .bio gTLD.

The Applicant will additionally:

- Develop a trusted method of communication for all correspondence between the Applicant and the .bio gTLD's registrars, to ensure that all registrant contact information, including WHOIS records, is complete and remains current, and that all requests for registration within the space may be easily verified for authenticity.
- Implement effective mechanisms for identifying and addressing abusive practices.
- Establish a point of contact for third-party reporting of abusive practices.
- Ensure accurate WHOIS data by implementing and enforcing a strict registration and validation policy. The Registry-Registrar Agreement will furthermore include the obligation of accredited registrars to validate and verify each registration request.
- Determine and implement a streamlined practice for addressing and removing orphan glue records.
- Publish on its website and include as binding registry policy an Anti-Abuse Policy, described in detail below, which provides applicable definitions of abuse and outlining steps Starting Dot will take to address any such situations.

A. Point of Contact for Abuse Complaints

The abuse email inbox will be routinely and continuously monitored several times per day. Complainants will be provided with a responsive communication containing an auditable tracking or case number.

The abuse point of contact will be easily reachable through various channels, including email, telephone and fax, responsive and effective, tasked with answering email quickly, empowered to take effective action, and guided by well-defined written criteria that will be established upon award of the .bio gTLD. This role-based function will be performed by a team of trained and qualified in-house counsels. Initially, at least one designated employee from the Applicant's legal department will be tasked with overseeing the .bio gTLD as part of his/her duties. One or more additional employees will be trained in the role as well, in order to provide "back up" assistance as needed. The abuse point of contact will be supported by Nathalie Dreyfus, Trademark Attorney, from the Law Firm Dreyfus & Associés, of Paris, France, with whom the abuse point of contact will consult and coordinate the correct management of disputes and reported abuse. The abuse point of contact will further consult with the registry service provider in order to coordinate technical reactions necessary to respond to or mitigate abusive behavior in a timely manner. Nathalie Dreyfus is a UDRP Panelist with the WIPO Arbitration and Mediation Center, the National Arbitration Forum (NAF), the Belgian Center for Mediation and Arbitration (CEPINA), the Asian Domain Name Dispute Resolution Center

(ADNDRC) and the Czech Arbitration Court and has a first-class knowledge of ICANN and its structure. With regard to the estimated number of registrations and the Registration Restrictions, these allocated resources will be sufficient to handle the expected initial volume of abuse complaints. Abuse complaint metrics will be tracked and reviewed carefully each year, and adequate resources will be expended to ensure appropriate trending of those metrics, thus providing the abuse point of contact with sufficient resources. Given the Applicant's belief that infrastructure protection, rights protection, and user security are of paramount importance for a TLD owner, the Applicant expects to ensure sufficient resources for this critical role, and to do whatever is reasonably necessary to ensure a secure and trusted zone.

B. Anti-Abuse Policy

The Applicant will develop and implement upon launch of the .bio gTLD an Anti-Abuse Policy (AAP). The AAP will be made binding for all registrants by contractually obligating registrars through the Registry-Registrar Agreement to pass on the AAP as part of their registration agreements. The AAP will also be published prominently on the Registry website alongside the abuse point of contact and with instructions on how to best report any suspected violations of the AAP to the registry.

The AAP will be based on and expand upon existing registry policies to ensure best industry practice is followed. The goal of the AAP is to limit significant harm to internet users, to enable the Applicant or accredited registrars to investigate and to take action in case of malicious use of domain names and to deter registrants from engaging in illegal or fraudulent use of domain names.

The Applicant defines abuse as an action that causes actual and substantial harm, or is a material predicate of such harm, and is illegal, illegitimate, or otherwise contrary to Company policy.

"Abuse" includes, but is not limited to, the following:

- Use of a domain to defraud or attempt to defraud members of the public in any way
- Use of a domain to distribute or publish hateful, defamatory, or derogatory content based on racial, ethnic, or political grounds, intended or generally able to cause or incite injury, damage or harm of any kind to any person or entity
- Use of a domain name to publish content threatening or invading the privacy or property rights of a third party
- Use of a domain name to publish content that infringes the trademarks, copyrights, patent rights, trade secrets or other intellectual property rights, or any other legal rights of the Applicant or any third party, or any action infringing on the named rights
- Violation of any applicable local, state, national or international law or regulation
- Use of a domain name for the promotion, involvement in or assisting in, illegal activity of any kind, as well as the promotion of business opportunities or investments that are not permitted under applicable law
- Advertisement or offer for sale any unlawful goods or services in breach of any national or international law or regulation
- Use of domain names to contribute to the sale or distribution of prescription medication without a valid prescription as well as the sale and distribution of unlicensed or unapproved medication
- Distribution of Child Pornography or other content depicting minors engaged in any activity of a sexual nature or which may otherwise harm minors
- Use of domain names to cause minors to view sexually explicit material

- Any use of domain names with regard to spam in any form, including through e-mail, instant messaging, mobile messaging, or the spamming of Web sites or Internet forums, as well as advertising for a domain name through spam
- Initiation or intentional participation in denial-of-service attacks (“DDoS attacks”)
- The use of domain names in phishing activities, tricking Internet users into divulging personal data such as usernames, passwords, or financial data
- The use of domain names in pharming , such as DNS hijacking and poisoning
- The use of domain names for the intentional distribution of spyware, botware, keylogger bots, viruses, worms, trojans or other forms of malware
- The use of a domain name in unauthorized fast flux hosting, disguising the location of internet addresses or Internet services. Fast flux hosting may be used only with prior permission of the Applicant
- The use of domain names to command and control botnets, i.e. a network of compromised computers or “zombies”
- The use of domain names in activities intended to gain illegal access to other computers or networks (“hacking”), as well as any activity to prepare for such system penetration

In accordance with best practices in current generic Top Level Domains, the Applicant reserves the right to either directly or through the issuing of a request to an accredited registrar deny, cancel or transfer any registration or transaction, or place any domain name(s) on registry lock, hold or similar status, that it deems necessary, in its discretion:

1. to protect the integrity and stability of the .bio gTLD and/or prevent the abuse of any .bio domain name
2. to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process
3. to avoid any liability, civil or criminal, on the part of the Applicant, as well as its affiliates, subsidiaries, officers, directors, and employees
4. per the terms of the Registry Agreement or
5. to correct mistakes made by the Applicant, Registry Service Provider or any Registrar(s) in connection with a domain name registration

The Applicant also reserves the right to place a domain upon registry lock, hold or similar status name during resolution of an investigation or dispute.

C. Handling of Abuse Reports

All abuse reports received by the abuse point of contact will be tracked internally in a ticketing system to ensure accountability and ease of reference, and a tracking number will be provided to the reporter. Each report will be carefully reviewed and evaluated regarding its credibility, to determine whether the reported issue is an abuse concern and to assess the required action(s), if any. The Applicant will work in tandem with the sponsoring registrar as well as the Registry Service Provider to rapidly address potential threats or abuse complaints, investigate all reasonable complaints, and take any appropriate action(s) thereto.

As standard practice, the Applicant will forward all credible and actionable reports, including the accompanying evidence, if any, to the sponsoring registrar, with a request to investigate the issue further and to take appropriate action. The sponsoring registrar has a direct relationship with the registrant and therefore possesses further information not available to the Applicant, such as payment details, sales history, and IP addresses of the customer, reseller data (if applicable) and other specific data unique to the

customer. In case the registrar determines in the course of the investigation that the use of the domain name violates the applicable terms of use, ICANN policies or the AAP, the registrar is expected to take action within reasonable time. The Applicant further reserves the right to act directly and immediately in cases of obvious and significant malicious conduct.

The Applicant will implement valid court orders or seizure warrants from courts, arbitration tribunals, or law enforcement agencies of applicable jurisdiction as a top priority. The Applicant will further work closely with law enforcement agencies if necessary.

Based upon the applicable registration policies and restrictions, the Applicant does not expect further measures to be required to effectively prevent or stop malicious use. In case of an unexpected volume of credible abuse complaints, the Applicant will take advantage of additional resources such as spam databases and blocklists, anti-phishing feeds, analysis of registration data, and DNS queries.

D. Orphan Glue Records:

According to the ICANN SSAC paper SAC048 at:

<http://www.icann.org/en/committees/security/sac048.pdf> orphan glue records are defined as follows:

“By definition, orphan records used to be glue records. A glue record becomes an ‘orphan’ when the delegation point NS record referencing it is removed without also removing the corresponding glue record. The delegation point NS record is sometimes referred to as the parent NS record.”

An orphan glue record can occur whenever a domain is placed in ServerHold or ClientHold status. In these cases, the domain is removed from the zone file but existing name servers of this domain will be kept in the zone file so that other sites which are still using these name servers are still kept functional.

Example:

“example.string” is deleted from the zone file by setting to ServerHold status, but “ns1.example.string” will be kept in the zone file.

Prevention of Orphan Glue Records During Domain Deletion

Deleting a domain name is only possible if there are no glue records used by other domains associated with the domain being deleted.

If there are glue records available but not used by other domains in the registry, the glue records will be deleted prior to the domain deletion. Whenever there are glue records available which are still in use, this has to be resolved first. If there are no glue records at all the domain can be deleted instantly.

Solving the problem of glue records for domains which are supposed to be deleted can be done by checking the zone file. The zone file reveals the domains which are using the name servers. Once the required information is available, the named registrars must be contacted and new name servers should be set for the remaining domains in order to release the glue records.

In cases where glue records are being used in a malicious way, the abuse point of contact has to be contacted. The abuse point of contact will check this issue and take any appropriate actions, which may result in removing relevant records from the zone file in case the abuse complaint is valid.

E. Preventive Countermeasures

Pharming is an abusive practice used to gain illegal access to personal and confidential internet user information by diverting internet traffic through the manipulation of the information between the recursive resolver name server and the client software (e.g. web browser) (DNS-cache poisoning). Since pharming is commonly accomplished by redirecting traffic at the recursive DNS level, mitigation is most effective at the ISP level.

However, as an added countermeasure, the Registry Service Provider (KSregistry) will sign the domain zone using DNSSEC, as detailed in the answer to question 35, allowing the relying party to establish a chain of trust from the DNS root down to the domain name, thus validating DNS queries in the zone.

Registrars will be encouraged to use a DNSSEC enabled DNS hoster and to provision the related delegation signers (originating from the DNS hoster) to KSregistry's SRS via EPP. This way it will be possible for the relying party to validate DNS queries and to protect from DNS tampering to a certain degree.

DNSSEC is a set of records and protocol modifications that provide authentication of the signer of the DNS data, verification of integrity of the DNS data against modification, non-repudiation of DNS data that have been signed, and authenticated denial of existence of DNS records. DNS data secured with DNSSEC are cryptographically signed and incorporate asymmetric cryptography in the DNS hierarchy, whereby trust follows the same chain as the DNS tree, meaning that trust originates from the root and is delegated in the same way as the control of a domain. When a domain name in the .bio gTLD is requested by a browser, the signature is validated with the public key stored in the parent zone.

F. Promoting Accurate WHOIS Data

The Applicant is committed to maintaining the .bio gTLD space as a safe, secure online environment. A key component of such a plan is the creation and upkeep of accurate WHOIS records for the registry. As indicated in detail in the above answer to Question 26, the Applicant will develop strong safeguards to verify the accuracy and privacy of the data stored in the WHOIS database, and will ensure that such records will be publicly-available to the extent required by ICANN regulations.

The WHOIS records for the .bio gTLD will constitute a "thick" WHOIS, combining all applicable data and information for domain name registrants in a central location. The individual registrars offering .bio domain names will be responsible, under the terms of the Registry-Registrar Agreement, for providing and promptly updating the WHOIS database with current, accurate and complete information. The Registry Service

Provider will be responsible for monitoring such information and records to ensure that registrars comply with the contractual agreements to provide accurate data, including the use of field-valid telephone and fax numbers and the use of country names as defined under ISO 3166. The Applicant shall expressly reserve the right to cancel or suspend any domain name registrations within the space should a registrant fail to provide accurate or complete WHOIS information.

At all times, ICANN's WHOIS Data Problem Reporting System (WDPRS) will be available to anyone wishing to file a complaint regarding the accuracy or sufficiency of WHOIS records within the .bio gTLD.

G. Registrant Authentication

The registrar will be responsible for making sure that only authenticated registration requests will be submitted to the registry, ensuring the accuracy of the WHOIS. Effectively, this will ensure that all WHOIS data is 100% accurate and pre-validated.

The Applicant will accordingly maintain strict control over the registration and use of .bio domain names. Only authorized personnel will be able to release a name from reservation and register it for use through an ICANN-accredited registrar. Likewise, only authorized Company personnel will be able to make DNS changes or alterations to the WHOIS data for the domain names. The Applicant will require multiple unique points of contact to request and/or approve update, transfer, and deletion requests, and will require notification of multiple, unique points of contact when a domain has been updated, transferred, or deleted.

These checks will include a clear, written policy detailing the steps by which such corporate authority may initiate the request for a domain name registration in the .bio gTLD. The concerned registrar(s) will have the ability to register domain names in the .bio gTLD only upon receipt of the proper corporate approval. Furthermore, there will be strict policies in place to prevent unauthorized changes to name servers, WHOIS or other DNS information, including registration of third- and higher-level subdomains.

In the event that the Applicant decides to license the use of .bio domain names or subdomains to affiliates, additional levels of corporate approval may be required in order to ensure the proper use of such domain names.

H. Licensed Domain Names

The Applicant may, from time to time and in its sole discretion, elect to license the use of .bio domain names to its affiliates. The Applicant will ensure that any such licensed affiliates will have only a limited license to use the allocated domain name, subject to continuing compliance with all policies in place during that time. Should the Applicant elect to offer such license arrangements, additional corporate approval may be required to ensure internal responsibility for overseeing and enforcing the terms of the license. Any licensee(s) must warrant they will not assign the license or sublicense any subdomain without

- securing the sublicensee's agreement to any and all terms required by the Applicant, including the Acceptable Use Policy and all other applicable policies
- obtaining the Applicant's prior consent in writing

I. Ensuring Proper Access to Domain Functions

The Registry will be operated using a comprehensive and detailed authentication system designed to implement a wide range of registry functions for both internal operations and as external registrar access. Registrar access will be limited by IP address control lists and TLS/SSL certificates, as well as verification processes for proper authentication and appropriate limitations to restrict access to the sponsored objects.

Each domain name will be assigned a unique AUTH-INFO code. The AUTH-INFO code is a 6- to 16-character code assigned by the registrar at the time a domain is created and which can be modified by the registrar at any time. Its purpose is to aid in the identification of the domain owner so that proper authority can be established. For example, a registrar-to-registrar transfer can be initiated only by using the correct AUTH-INFO code, to ensure that domain updates (update contact information, transfer, or deletion) are undertaken by the authorized registrant. Access to the domain's AUTH-INFO code, stored in the registry, is limited to the sponsoring registrar and is accessible only via encrypted, password-protected channels.

Further security measures are anticipated and will be implemented in the new space, but are currently treated as confidential for security reasons. Accordingly, a full explanation of these mechanisms may be found in the response to Question 30(b).

J. References and Attachments

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Ikano S.A.
Application ID	1-1002-9044
Applied for TLD (string)	.IKANO

Response:

Summary

Ikano S.A. welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

Ikano S.A. welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .IKANO by Ikano S.A.

Ikano S.A. would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights (<http://www.un.org/en/documents/udhr/index.shtml>). In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.

GAC Advice Response Form for Applicants

- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by Ikano S.A. for .IKANO based on General Safeguards

Ikano S.A., the applicant for the .IKANO top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non - discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - Ikano S.A. will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Ikano S.A. will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - Ikano S.A. will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, Ikano S.A. will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Ikano S.A. identifies

GAC Advice Response Form for Applicants

security risks that pose an actual risk of harm, Ikano S.A. will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

4. Documentation - Ikano S.A. will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Ikano S.A. will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - Ikano S.A. will ensure that there is a mechanism for making complaints to Ikano S.A. that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, Ikano S.A. shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name. Ikano S.A. would like to note that registration policies will be set up according to this request.

Ikano S.A. would like to note that .IKANO is not a generic term and therefore the GAC Advice on exclusive access of generic terms does not apply. Furthermore Ikano S.A. would like to state that the .IKANO is not in the public interest, but a representation of Intellectual property rights of Ikano S.A..

Ikano S.A. reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	I-REGISTRY Ltd., Niederlassung Deutschland
Application ID	1-1003-1483
Applied for TLD (string)	RICH

Response:

Summary

I-REGISTRY Ltd., Niederlassung Deutschland (in the following “I-REGISTRY LTD.”) welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

I-REGISTRY LTD. welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .RICH by I-REGISTRY LTD.

I-REGISTRY LTD. would like to state, that:

1. We will respect human rights and fundamental freedoms

GAC Advice Response Form for Applicants

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

I-REGISTRY Ltd. is aware that the use of the internet including the registration and use of internet domain names may effect third party's rights, including but not limited to, personal rights, privacy rights, data privacy rights and intellectual property rights as well as criminal laws, civil laws and administrative laws, including the regulations concerning the privacy law and consumer protection. I-REGISTRY Ltd. understands that aforesaid rights and laws might, as the case may be, follow different legislatures and jurisdictions due to the internationality of the internet.

I-REGISTRY Ltd. respects and acknowledges the national legal systems of all national legitimate constitutional states as well as higher-level and superior laws, regulations and conventions and uses its best endeavors to anticipate and to impede any unlawful violations and infringements and to support law enforcements to the legitimate extent. That said, also I-REGISTRY Ltd.'s partners are expected to respect, acknowledge and comply with all the international legal provisions which might be effected, independent from the partner's location, its seat of business or place of origin.

I-REGISTRY Ltd. developed different measures in order to meet this admission. For example, I-REGISTRY Ltd. supports ICANN's Transfer Dispute Resolution Process, established a rights protection system, provides a concrete and binding Anti-Abuse Policy, provides a point-of-contact information for reporting suspected abuse, commits to rapid identification and resolution of abuse including suspensions, ensures completeness of WHOIS information at the time of registration; publishing and maintains procedures for removing orphan glue records for names removed from the zone, and establishes measures to deter WHOIS abuse.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by I-REGISTRY LTD. for .RICH based on General Safeguards

I-REGISTRY LTD., the applicant for the .RICH top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - I-REGISTRY LTD. will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. I-REGISTRY LTD. will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - I-REGISTRY LTD. will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, I-REGISTRY LTD. will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If I-REGISTRY LTD. identifies security risks that pose an actual risk of harm, I-REGISTRY LTD. will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - I-REGISTRY LTD. will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. I-REGISTRY LTD. will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - I-REGISTRY LTD. will ensure that there is a mechanism for making complaints to I-REGISTRY LTD. that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, I-REGISTRY LTD. shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

I-REGISTRY LTD. would like to note that registration policies will be setup according to this request.

I-REGISTRY LTD. reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback. We're asked to provide a

GAC Advice Response Form for Applicants

statement to the GAC Advice without knowing the decision by the ICANN New gTLD Program Committee. Therefore we reserve the right to limit our statements to those being approved by the ICANN New gTLD Program Committee.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	I-REGISTRY Ltd., Niederlassung Deutschland
Application ID	1-1003-27595
Applied for TLD (string)	ONL

Response:

Summary

I-REGISTRY Ltd., Niederlassung Deutschland (in the following “I-REGISTRY LTD.”) welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

I-REGISTRY LTD. welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .ONL by I-REGISTRY LTD.

I-REGISTRY LTD. would like to state, that:

1. We will respect human rights and fundamental freedoms

GAC Advice Response Form for Applicants

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

I-REGISTRY Ltd. is aware that the use of the internet including the registration and use of internet domain names may effect third party's rights, including but not limited to, personal rights, privacy rights, data privacy rights and intellectual property rights as well as criminal laws, civil laws and administrative laws, including the regulations concerning the privacy law and consumer protection. I-REGISTRY Ltd. understands that aforesaid rights and laws might, as the case may be, follow different legislatures and jurisdictions due to the internationality of the internet.

I-REGISTRY Ltd. respects and acknowledges the national legal systems of all national legitimate constitutional states as well as higher-level and superior laws, regulations and conventions and uses its best endeavors to anticipate and to impede any unlawful violations and infringements and to support law enforcements to the legitimate extent. That said, also I-REGISTRY Ltd.'s partners are expected to respect, acknowledge and comply with all the international legal provisions which might be effected, independent from the partner's location, its seat of business or place of origin.

I-REGISTRY Ltd. developed different measures in order to meet this admission. For example, I-REGISTRY Ltd. supports ICANN's Transfer Dispute Resolution Process, established a rights protection system, provides a concrete and binding Anti-Abuse Policy, provides a point-of-contact information for reporting suspected abuse, commits to rapid identification and resolution of abuse including suspensions, ensures completeness of WHOIS information at the time of registration; publishing and maintains procedures for removing orphan glue records for names removed from the zone, and establishes measures to deter WHOIS abuse.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by I-REGISTRY LTD. for .ONL based on General Safeguards

I-REGISTRY LTD., the applicant for the .ONL top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - I-REGISTRY LTD. will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. I-REGISTRY LTD. will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - I-REGISTRY LTD. will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, I-REGISTRY LTD. will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If I-REGISTRY LTD. identifies security risks that pose an actual risk of harm, I-REGISTRY LTD. will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - I-REGISTRY LTD. will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. I-REGISTRY LTD. will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - I-REGISTRY LTD. will ensure that there is a mechanism for making complaints to I-REGISTRY LTD. that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, I-REGISTRY LTD. shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

I-REGISTRY LTD. would like to note that registration policies will be setup according to this request.

I-REGISTRY LTD. reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on community feedback including the GAC. We're asked to

GAC Advice Response Form for Applicants

provide a statement to the GAC Advice without knowing the decision by the ICANN New gTLD Program Committee. Therefore we reserve the right to limit our statements to those being approved by the ICANN New gTLD Program Committee.

- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .ONLINE by I-REGISTRY Ltd.

I-REGISTRY Ltd. would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

According to our policies in question 18, we stated under “IV. Acceptable Use of .online Domain Names” the “5. Acceptable Use Policy”. I-REGISTRY Ltd. is aware that the use of the internet including the registration and use of internet domain names may effect third party’s rights, including but not limited to, personal rights, privacy rights, data privacy rights and intellectual property rights as well as criminal laws, civil laws and administrative laws, including the regulations concerning the privacy law and consumer protection.

I-REGISTRY Ltd. understands that aforesaid rights and laws might, as the case may be, follow different legislatures and jurisdictions due to the internationality of the internet. I-REGISTRY Ltd. respects and acknowledges the national legal systems of all national legitimate constitutional states as well as higher-level and superior laws, regulations and conventions and uses its best endeavors to anticipate and to impede any unlawful violations and infringements and to support law enforcements to the legitimate extent. That said, also I-REGISTRY Ltd.’s partners are expected to respect, acknowledge and comply with all the international legal provisions which might be effected, independent from the partner’s location, its seat of business or place of origin.

I-REGISTRY Ltd. developed different measures in order to meet this admission. For example I-REGISTRY Ltd. supports ICANN’s Transfer Dispute Resolution Process, established a rights protection system, provides a concrete and binding Anti-Abuse Policy, provides a point-of-contact information for reporting suspected abuse, commits to rapid identification and resolution of abuse including suspensions, ensures completeness of WHOIS information at the time of registration; publishing and maintains procedures for removing orphan glue records for names removed from the zone, and establishes measures to deter WHOIS abuse.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination, which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by I-REGISTRY Ltd. for .ONLINE on General Safeguards and Consumer Protection Safeguards

I-REGISTRY Ltd., the applicant for the .ONLINE Top-Level-Domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - I-REGISTRY Ltd. will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. I-REGISTRY Ltd. will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - I-REGISTRY Ltd. will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, I-REGISTRY Ltd. will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If I-REGISTRY Ltd. identifies security risks that pose an actual risk of harm, I-REGISTRY Ltd. will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - I-REGISTRY Ltd. will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. I-REGISTRY Ltd. will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - I-REGISTRY Ltd. will ensure that there is a mechanism for making complaints to I-REGISTRY Ltd. that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, I-REGISTRY Ltd. shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

I-REGISTRY Ltd. commits to operate the gTLD in a way that is consistent with applicable laws, as this TLD is related to consumer protection, sensitive TLDs and/or regulated markets. The following safeguards will apply to .ONLINE:

1. I-REGISTRY Ltd. has already included in its acceptable use policy (according to section IV. Acceptable Use of .online Domain Names; 5. Acceptable Use) that registrants have to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.
2. I-REGISTRY Ltd. will require registrars at the time of registration to notify registrants of this requirement. An example for this notification may be: „This can be technically accomplished by displaying the relevant guidelines and conditions to the registrant during the registration process. The registration can only be completed if the registrant confirms actively "I have read and understood these conditions and completely agree. I agree to abide to them.
3. I-REGISTRY Ltd. will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.
4. I-REGISTRY Ltd. established a working relationship with the relevant regulatory, or industry self-regulatory, bodies, including the development of a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities. To date, relations have been initiated with relevant self-regulatory bodies, and will be extended in the future.
5. Registrants will be required by I-REGISTRY Ltd. to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

I-REGISTRY will, if requested by ICANN and/or the GAC, file in addition to this document a binding “Public Interest Commitment” containing the above stated measures. We’re asked to provide a statement to the GAC Advice without knowing the decision by the ICANN New gTLD Program Committee. Therefore we reserve the right to limit our statements to those being approved by the ICANN New gTLD Program Committee.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Bugatti International SA
Application ID	1-1004-9564
Applied for TLD (string)	BUGATTI

Response:

Bugatti International SA, the applicant for the .BUGATTI top-level domain, welcomes and supports the GAC Advice as published on April 11, 2013, since the requested safeguards from GAC have always been fundamental principles for Bugatti International SA and have therefore been incorporated in the application accordingly. The GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

Bugatti International SA welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** General principles of operations for .BUGATTI by Bugatti International SA

Bugatti International SA would like to state, that:

1. We will respect human rights and fundamental freedoms

GAC Advice Response Form for Applicants

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by Bugatti International SA for .BUGATTI based on General Safeguards

Bugatti International SA will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - Bugatti International SA will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Bugatti International SA will notify the relevant registrar of any inaccurate

or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

2. Mitigating abusive activity - Bugatti International SA will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

3. Security checks - While respecting privacy and confidentiality, Bugatti International SA will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Bugatti International SA identifies security risks that pose an actual risk of harm, Bugatti International SA will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

4. Documentation - Bugatti International SA will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Bugatti International SA will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - Bugatti International SA will ensure that there is a mechanism for making complaints to Bugatti International SA that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, Bugatti International SA shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Bugatti International SA would like to note that registration policies will be setup according to this request.

Bugatti International SA would like to note that .BUGATTI is not a generic term and therefore the GAC Advice on exclusive access of generic terms does not apply. Furthermore Bugatti International SA would like to state that the .BUGATTI is not in the public interest, but a representation of Intellectual property rights of Bugatti International SA.

However Bugatti International SA reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	SportAccord
Application ID	1-1012-71460
Applied for TLD (string)	SPORT

Response:

SPORTACCORD input in response to Beijing GAC advice

Even though the .sport TLD application is not directly mentioned in the GAC Advice, SportAccord would like to make the following statements with regard to the principles contained in the GAC Communiqué in relation to SportAccord’s .sport TLD application and from the perspective of the Sport community. SportAccord is the umbrella organisation for both Olympic and non-Olympic international sports federations as well as organisers of international sporting events.

A. Safeguards for the .sport TLD

The .sport TLD shares some of the specific characteristics of number of the categories mentioned by GAC. For instance, the .sport TLD

- is related to health and wellbeing;
- is specifically relevant in the education of children and youth;
- is in many cases an organized activity with sectoral and professional rules based on public interest principles.

This is why our application contains all the necessary safeguards to address GAC concerns, and these safeguards will be carried to .sport TLD Policies, Agreements and Dispute Resolution Procedures, as described below.

A.1. Registration policies

Registration in the .sport will be restricted to members of the Sport community, subject to the additional requirements that the registrant's role in the Sport community, as well as the registrant's use of the registered domain name, must be:

- (i) generally accepted as legitimate; and
- (ii) beneficial to the cause and the values of Sport; and
- (iii) commensurate with the role and importance of the registered domain name; and
- (iv) in good faith at the time of registration and thereafter.

A.2. Enforcement Mechanisms

We would like to specifically draw attention more to the enforcement mechanisms devised by SportAccord to maintain the quality of the TLD namespace and its compliance with the rules, and mitigate possible abuses.

In this regard, the following mechanism are particularly relevant and already clearly set forth in SportAccord's Application for the .sport TLD:

- 1 Rapid Takedown Policy for cases of general malicious conduct (Q28.1)
- 2 Rapid Takedown Policy for cases of phishing, with drastically shortened response times (Q28.2)
- 3 Single Point of Contact in case of complaints of abusive or non-compliant behavior by the Registry (Q28.3)
- 4 Admin Contact as Single Point of Contact in case of complaints of abusive or non-compliant behavior by the Registrant (Q20.e.1)
- 5 Ex-Officio Random Checks of the usage of registered Domain Names (Q29.2.1)
- 6 Complaints System (Q29.2.2)

All these mechanisms are in addition of the validation procedures established at registration time. We firmly believe that in conjunction with our registration policies and ICANN-mandated policies SportAccord adequately addresses all the safeguards outlined by GAC both for those applicable to all new gTLDs as well as the additional safeguards advised for certain categories of new gTLDs.

B. Community Applications

As applicant of .sport TLD on behalf of the Sport Community SportAccord would like to express its support to the GAC's position, as stated in Point IV.e of the Beijing GAC Communiqué:

"(...) that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information."

C. Singular/plural string confusion (.sport/.sports)

SportAccord joins the GAC's expression of concern about a TLD representing the plural form of a word while another TLD represents the singular form of the same word.

GAC Advice Response Form for Applicants

SportAccord filed a string confusion objection because an extremely high likelihood of confusion exists between “.sports” and “.sport”.

SportAccord was able to take action to prevent confusion between .sport/sports only because it is the applicant for the .sport TLD. The other applicants for .sport/sports did not file a string confusion objection.

This points to a serious flaw in the ICANN gTLD program. Even though string confusion is highly detrimental to members of the affected communities, a TLD registry lacking community accountability may find it profitable. The ICANN gTLD program should not rely on the self-interest of TLD operators alone to avoid TLD string confusion.

D. Community-related Needs to Protect the .sport Namespace

In addition to the concerns identified by the GAC, the .sport TLD is subject to a number of public policy objectives of specific importance to the Sport community.

The Sport community has a long-standing commitment to these goals, for example:

- Measures against illegal betting
- Measures against doping
- Measures against violence and hooliganism
- Measures against racism, discrimination and bullying

Achievements and progress in this respect would be jeopardized if the .sport TLD were to be operated without adequate community-based accountability and prudential policies.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	.APP Registry Inc.
Application ID	1-1013-7451
Applied for TLD (string)	APP

Response:

Dear ICANN Board & GAC,

First and foremost, .APP Registry Inc. thanks the GAC for providing a comprehensive set of advice to the ICANN Board on the subject of safeguards for new gTLDs. We also appreciate the opportunity to provide our response and feedback to the ICANN Board.

As a responsible new gTLD applicant, .APP Registry Inc. is glad to say that it has already included many measures in the submitted proposal to address the issues raised by the GAC, and believe that its proposal is compliant with the GAC advice. We further remain fully prepared to work closely with the GAC and GAC members on any area to further enhance the safeguard measures for the governance and management of the introduction and operations of the .APP gTLD in an orderly, secure and stable manner, technically and socially.

As a participant in the ICANN process, we are encouraged by the active participation of the GAC in the process. The GAC and governments are an important component of the ICANN process and the multi-stakeholder governance of the Internet’s root DNS. Many of the issues raised by the GAC advice are issues that are actively discussed by the ICANN community. Some of which are already included in the considerations for this round of new gTLDs (e.g. #28 Abuse Prevention and Mitigation), some others are currently being discussed within the ICANN process. For example, policy development processes for WHOIS are ongoing and registration

GAC Advice Response Form for Applicants

and usage abuse issues continue to be examined, including especially where such abuse issues should be within or beyond the scope of ICANN's purview.

For such items, we understand that ongoing multi-stakeholder processes should not be circumvented, and remain diligent against such undermining. Nevertheless, we are fully prepared to improve on our proposed mechanisms in our application as well as to implement appropriate measures for .APP specifically as Registry policies before community wide ICANN policies are fully in place.

Finally, we also bring your attention to the ongoing work underway since the recent CEO Roundtables and further discussed at the DNS Summit (<http://blog.icann.org/2013/04/dns-summit-in-new-york/>). Especially the "proposals to codify ethical standards for DNS businesses", which may be an appropriate framework for addressing issues (e.g. content related) that may be beyond the scope of ICANN's policy mandate.

Attached further are specific responses to each of the issues raised in the GAC advice with excerpts from particular sections of the submitted .APP Registry Inc. proposal (<https://gtldresult.icann.org/application-result/applicationstatus/applicationdetails:downloadapplication/457?t:ac=457>) and how it complies with and relates to the GAC advice.

We look forward to continuing the dialogue with the ICANN board and the GAC to address any issues and put policies in place to mitigate against concerns in a constructive and prompt manner.

Sincerely,

.APP Registry Inc.

.APP. Response to GAC Communiqué – Beijing April 11, 2013

Annex I

Safeguards on New gTLDs

The GAC considers that Safeguards should apply to broad categories of strings. For clarity, this means any application for a relevant string in the current or future rounds, in all languages applied for.

The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.

Safeguards Applicable to all New gTLDs

The GAC Advises that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

We are prepared to be subjected to contractual oversight for safeguards applicable to all new gTLDs.

1. WHOIS verification and checks — Registry operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

We are supportive of the direction for this advice and believe that we are already compliant. The scope and specific standard implementation of such policies may best be developed as a product of the ongoing WHOIS policy development process.

Nevertheless, individual Registry policies can provide the interim solution for this safeguard. We, along with our Technical Services Provider Afilias, have already

provided some of these mechanisms in our original response to #28 Abuse Prevention and Mitigation:

Methods to promote WHOIS accuracy

The creation and maintenance of accurate WHOIS records is an important part of registry management. As described in our response to question #26, WHOIS, the registry operator will manage a secure, robust and searchable WHOIS service for this TLD.

WHOIS data accuracy

The registry operator will offer a “thick” registry system. In this model, all key contact details for each domain name will be stored in a central location by the registry. This allows better access to domain data, and provides uniformity in storing the information. The registry operator will ensure that the required fields for WHOIS data (as per the defined policies for the TLD) are enforced at the registry level. This ensures that the registrars are providing required domain registration data. Fields defined by the registry policy to be mandatory are documented as such and must be submitted by registrars. The Afilias registry system verifies formats for relevant individual data fields (e.g. e-mail, and phone/fax numbers). Only valid country codes are allowed as defined by the ISO 3166 code list. The Afilias WHOIS system is extensible, and is capable of using the VAULT system, described further below.

Similar to the centralized abuse point of contact described above, the registry operator can institute a contact email address which could be utilized by third parties to submit complaints for inaccurate or false WHOIS data detected. This information will be processed by Afilias’ support department and forwarded to the registrars. The registrars can work with the registrants of those domains to address these complaints. Afilias will audit registrars on a yearly basis to verify whether the complaints being forwarded are being addressed or not. This functionality, available to all registry operators, is activated based on the registry operator’s business policy.

Afilias also incorporates a spot-check verification system where a randomly selected set of domain names are checked periodically for accuracy of WHOIS data. Afilias’ .PRO registry system incorporates such a verification system whereby 1% of total registrations or 100 domains, whichever number is larger, are spot-checked every month to verify the domain name registrant’s critical information provided with the domain registration data. With both a highly qualified corps of engineers and a 24x7 staffed support function, Afilias has the capacity to integrate such spot-check functionality into this TLD, based on the registry operator’s business policy. Note: This functionality will not work for proxy protected WHOIS information, where registrars or their resellers have the actual registrant data. The solution to that problem lies with either registry or registrar policy, or a change in the general marketplace practices with respect to proxy registrations.

Finally, Afiliias' registry systems have a sophisticated set of billing and pricing functionality which aids registry operators who decide to provide a set of financial incentives to registrars for maintaining or improving WHOIS accuracy. For instance, it is conceivable that the registry operator may decide to provide a discount for the domain registration or renewal fees for validated registrants, or levy a larger cost for the domain registration or renewal of proxy domain names. The Afiliias system has the capability to support such incentives on a configurable basis, towards the goal of promoting better WHOIS accuracy.

Role of registrars

As part of the RRA (Registry Registrar Agreement), the registry operator will require the registrar to be responsible for ensuring the input of accurate WHOIS data by their registrants. The Registrar/Registered Name Holder Agreement will include a specific clause to ensure accuracy of WHOIS data, and to give the registrar rights to cancel or suspend registrations if the Registered Name Holder fails to respond to the registrar's query regarding accuracy of data. ICANN's WHOIS Data Problem Reporting System (WDPRS) will be available to those who wish to file WHOIS inaccuracy reports, as per ICANN policy (<http://wdprs.internic.net/>).

The above are the baseline abuse prevention and mitigation measures of the registry. The registry is prepared to work with ICANN and the GAC to further enhance the measures where appropriate.

2. Mitigating abusive activity — Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

We are prepared to and have already proposed to include in our Registry-Registrar Agreement (RRA) provisions to ensure that terms of use for registrants include prohibitions against abusive activities.

The following is an extract from our response to #28 Abuse Prevention and Mitigation:

.APP Anti-Abuse Policy

The following Anti-Abuse Policy is effective upon launch of the TLD. Malicious use of domain names will not be tolerated. The nature of such abuses creates security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. The registry operator definition of abusive use of a domain includes, without limitation, the following:

- *Illegal or fraudulent actions;*

- *Spam: The use of electronic messaging systems to send unsolicited bulk messages. The term applies to email spam and similar abuses such as instant messaging spam, mobile messaging spam, and the spamming of web sites and Internet forums;*
- *Phishing: The use of counterfeit web pages that are designed to trick recipients into divulging sensitive data such as personally identifying information, usernames, passwords, or financial data;*
- *Pharming: The redirecting of unknowing users to fraudulent sites or services, typically through, but not limited to, DNS hijacking or poisoning;*
- *Willful distribution of malware: The dissemination of software designed to infiltrate or damage a computer system without the owner's informed consent. Examples include, without limitation, computer viruses, worms, keyloggers, and Trojan horses.*
- *Malicious fast-flux hosting: Use of fast-flux techniques with a botnet to disguise the location of web sites or other Internet services, or to avoid detection and mitigation efforts, or to host illegal activities.*
- *Botnet command and control: Services run on a domain name that are used to control a collection of compromised computers or "zombies," or to direct distributed denial-of-service attacks (DDoS attacks);*
- *Illegal Access to Other Computers or Networks: Illegally accessing computers, accounts, or networks belonging to another party, or attempting to penetrate security measures of another individual's system (often known as "hacking"). Also, any activity that might be used as a precursor to an attempted system penetration (e.g., port scan, stealth scan, or other information gathering activity).*

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

3. Security checks — While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

We are supportive of proactive measures to ensure the security and stability of the Internet. As indicated in the GAC advice, the respecting of privacy and confidentiality is paramount. Furthermore, while the inclusion of appropriate terms of use for registrants as described in “2. Mitigating abusive activity” above provides an effective enforcement mechanism, the subject matter of certain threats may traverse beyond the purview of ICANN policy coordination. For example matters concerning content. Such determination may best be addressed in proper ICANN policy development processes if implemented as a contractual and enforcement matter by ICANN.

Nevertheless, the Registry is fully prepared to implement policies within the registry and have already proposed such mechanisms in our original application under #28 Abuse Prevention and Mitigation:

Different types of malicious activities require different methods of investigation and documentation. Further, the registry operator expects to face unexpected or complex situations that call for professional advice, and will rely upon professional, trained investigators as needed.

In general, there are two types of domain abuse that must be addressed:

- a) Compromised domains. These domains have been hacked or otherwise compromised by criminals, and the registrant is not responsible for the malicious activity taking place on the domain. For example, the majority of domain names that host phishing sites are compromised. The goal in such cases is to get word to the registrant (usually via the registrar) that there is a problem that needs attention with the expectation that the registrant will address the problem in a timely manner. Ideally such domains do not get suspended, since suspension would disrupt legitimate activity on the domain.*
- b) Malicious registrations. These domains are registered by malefactors for the purpose of abuse. Such domains are generally targets for suspension, since they have no legitimate use.*

The standard procedure is that the registry operator will forward a credible alleged case of malicious domain name use to the domain's sponsoring registrar with a request that the registrar investigate the case and act appropriately. The registrar will be provided evidence collected as a result of the investigation conducted by the trained abuse handlers. As part of the investigation, if inaccurate or false WHOIS registrant information is detected, the registrar is notified about this. The registrar is the party with a direct relationship with—and a direct contract with—the registrant. The registrar will also have vital information that the registry operator will not, such as:

- Details about the domain purchase, such as the payment method used (credit card, PayPal, etc.);*

- The identity of a proxy-protected registrant;*
- The purchaser's IP address;*
- Whether there is a reseller involved, and;*
- The registrant's past sales history and purchases in other TLDs (insofar as the registrar can determine this).*

Registrars do not share the above information with registry operators due to privacy and liability concerns, among others. Because they have more information with which to continue the investigation, and because they have a direct relationship with the registrant, the registrar is in the best position to evaluate alleged abuse. The registrar can determine if the use violates the registrar's legal terms of service or the registry Anti-Abuse Policy, and can decide whether or not to take any action. While the language and terms vary, registrars will be expected to include language in their registrar-registrant contracts that indemnifies the registrar if it takes action, and

allows the registrar to suspend or cancel a domain name; this will be in addition to the registry Anti-Abuse Policy. Generally, registrars can act if the registrant violates the registrar's terms of service, or violates ICANN policy, or if illegal activity is involved, or if the use violates the registry's Anti-Abuse Policy.

If a registrar does not take action within a time period indicated by the registry operator (usually 24 hours), the registry operator might then decide to take action itself. At all times, the registry operator reserves the right to act directly and immediately if the potential harm to Internet users seems significant or imminent, with or without notice to the sponsoring registrar.

The registry operator will be prepared to call upon relevant law enforcement bodies as needed. There are certain cases, for example, Illegal pharmacy domains, where the registry operator will contact the Law Enforcement Agencies to share information about these domains, provide all the evidence collected and work closely with them before any action will be taken for suspension. The specific action is often dependent upon the jurisdiction of which the registry operator, although the operator in all cases will adhere to applicable laws and regulations.

When valid court orders or seizure warrants are received from courts or law enforcement agencies of relevant jurisdiction, the registry operator will order execution in an expedited fashion. Compliance with these will be a top priority and will be completed as soon as possible and within the defined timelines of the order. There are certain cases where Law Enforcement Agencies request information about a domain including but not limited to:

- *Registration information*
- *History of a domain, including recent updates made*
- *Other domains associated with a registrant's account*
- *Patterns of registrant portfolio*

Requests for such information is handled on a priority basis and sent back to the requestor as soon as possible. Afilias sets a goal to respond to such requests within 24 hours.

The registry operator may also engage in proactive screening of its zone for malicious use of the domains in the TLD, and report problems to the sponsoring registrars. The registry operator could take advantage of a combination of the following resources, among others:

- *Blocklists of domain names and nameservers published by organizations such as SURBL and Spamhaus.*
- *Anti-phishing feeds, which will provide URLs of compromised and maliciously registered domains being used for phishing.*
- *Analysis of registration or DNS query data [DNS query data received by the TLD nameservers.]*

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

4. Documentation — Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

We are supportive of the conceptual directive and are prepared to maintain such documentation. We however caution about misinterpretation and/or misuse of such statistical data.

As proposed in our application (under #28 Abuse Prevention and Mitigation):

The registry operator will keep records and track metrics regarding abuse and abuse reports. These will include:

- *Number of abuse reports received by the registry's abuse point of contact described above;*
- *Number of cases and domains referred to registrars for resolution;*
- *Number of cases and domains where the registry took direct action;*
- *Resolution times;*
- *Number of domains in the TLD that have been blacklisted by major anti-spam blacklist providers, and;*
- *Phishing site uptimes in the TLD.*

...

The security function includes a communication and outreach function, with information sharing with industry partners regarding malicious or abusive behavior, in order to ensure coordinated abuse mitigation across multiple TLDs.

Assessing abuse reports requires great care, and the registry operator will rely upon professional, trained investigators who are versed in such matters. The goals are accuracy, good record-keeping, and a zero false-positive rate so as not to harm innocent registrants.

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

5. Making and Handling Complaints – Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or

copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

We are supportive of this advice and believe that our original proposal is already compliant with the GAC advice. Description of the mechanisms for handling complaints have been included in our response to #28 Abuse Prevention and Mitigation:

Abuse point of contact and procedures for handling abuse complaints

The registry operator will establish an abuse point of contact. This contact will be a role-based e-mail address of the form "abuse@registry.APP". This e-mail address will allow multiple staff members to monitor abuse reports on a 24x7 basis, and then work toward closure of cases as each situation calls for. For tracking purposes, the registry operator will have a ticketing system with which all complaints will be tracked internally. The reporter will be provided with the ticket reference identifier for potential follow-up. Afiliias will integrate its existing ticketing system with the registry operator's to ensure uniform tracking and handling of the complaint. This role-based approach has been used successfully by ISPs, e-mail service providers, and registrars for many years, and is considered a global best practice.

The registry operator's designated abuse handlers will then evaluate complaints received via the abuse system address. They will decide whether a particular issue is of concern, and decide what action, if any, is appropriate.

In general, the registry operator will find itself receiving abuse reports from a wide variety of parties, including security researchers and Internet security companies, financial institutions such as banks, Internet users, and law enforcement agencies among others. Some of these parties may provide good forensic data or supporting evidence of the malicious behavior. In other cases, the party reporting an issue may not be familiar with how to provide such data or proof of malicious behavior. It is expected that a percentage of abuse reports to the registry operator will not be actionable, because there will not be enough evidence to support the complaint (even after investigation), and because some reports or reporters will simply not be credible.

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

6. Consequences – Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

We are supportive of including mechanisms to suspend a domain name against abusive activities and believe we are already compliant with the GAC advice. In our proposal (under #28 Abuse Prevention and Mitigation and #29 Rights Protection Mechanisms), we have already included mechanisms to disqualify, suspend, cancel or delete domain registrations where appropriate:

Pursuant to the Registry-Registrar Agreement, registry operator reserves the right at its sole discretion to deny, cancel, or transfer any registration or transaction, or place any domain name(s) on registry lock, hold, or similar status, that it deems necessary: (1) to protect the integrity and stability of the registry; (2) to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process; (3) to avoid any liability, civil or criminal, on the part of registry operator, as well as its affiliates, subsidiaries, officers, directors, and employees; (4) per the terms of the registration agreement and this Anti-Abuse Policy, or (5) to correct mistakes made by registry operator or any registrar in connection with a domain name registration. Registry operator also reserves the right to place upon registry lock, hold, or similar status a domain name during resolution of a dispute.

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

Category 1 Consumer Protection, Sensitive Strings, and Regulated Markets:

The GAC Advises the ICANN Board:

- Strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm. The following safeguards should apply to strings that are related to these sectors:

1. Registry operators will include in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

We are prepared to be and believe that our proposal is already compliant with this advice.

As part of our response to #28 Abuse Prevention and Mitigation, we have included provisions to ensure that registrants comply with all applicable laws:

The registry operator definition of abusive use of a domain includes, without limitation, the following:

- *Illegal or fraudulent actions;*

GAC Advice Response Form for Applicants

- *Spam;*
- *Phishing;*
- *Pharming;*
- *Willful distribution of malware;*
- *Malicious fast-flux hosting;*
- *Botnet command and control;*
- *Illegal Access to Other Computers or Networks.*

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

We are prepared to be and believe our proposal is compliant with this advice. The Registry will specify in its Registry-Registrar Agreement (RRA) that all registrants must be notified of this requirement at the time of registration.

3. Registry operators will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

We are prepared to be and believe that our proposal is already compliant with this advice. As described in 1. above, illegal behaviour under applicable law is considered abusive activities disallowed by the registry. The Registry will have the ability to utilize the APM (Abuse Prevention & Mitigation) mechanisms to suspend, cancel, delete or otherwise take action against the domain registration.

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

4. Establish a working relationship with the relevant regulatory, or industry self--regulatory, bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.

We are supportive of and fully prepared to be compliant with this advice.

Because of the nature of “.APP” and because it is not as much a “regulated” industry we remain prepared to work with the GAC and GAC members to appropriately identify all relevant bodies to develop a strategy to maintain a working relationship with them, as well as to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

5. Registrants must be required by the registry operators to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

We are supportive of the conceptual direction of this advice to be able to connect with registrants in a timely fashion. At the same time, we also understand that within the current ICANN gTLD Registry-Registrar framework, the Registry should rely on the Sponsoring Registrar to connect with registrants. Many Registrars feel that it is inappropriate for the Registry to directly contacting the registrant.

Nevertheless, in balancing the above considerations, it is possible to setup an “Operations and Notifications Contact” (for example, this was approach was successfully implemented to address similar conditions during the original .ASIA ASCII launch), which Registrars and/or registrants may select to nominate, with default being either the Registrar contact or the Admin Contact for the registrant.

We are prepared to explore to include additional safeguards where appropriate in consultation with ICANN and the GAC.

The GAC further advises the Board:

1. In addition, some of the above strings may require further targeted safeguards, to address specific risks, and to bring registry policies in line with arrangements in place offline. In particular, a limited subset of the above strings are associated with market sectors which have clear and/or regulated entry requirements (such as: financial, gambling, professional services, environmental, health and fitness, corporate identifiers, and charity) in multiple jurisdictions, and the additional safeguards below should apply to some of the strings in those sectors:

6. At the time of registration, the registry operator must verify and validate the registrants’ authorisations, charters, licenses and/or other related credentials for participation in that sector.

Credentials of registrants will be checked with the Registrant pre-verification and authentication process as part of the Abuse prevention and mitigation mechanisms (#28):

Registrant pre-verification and authentication

One of the systems that could be used for validity and identity authentication is VAULT (Validation and Authentication Universal Lookup). It utilizes information obtained from a series of trusted data sources with access to billions of records containing data about individuals for the purpose of providing independent age and id verification as well as the ability to incorporate additional public or private data sources as required.

GAC Advice Response Form for Applicants

At present it has the following: US Residential Coverage - 90% of Adult Population and also International Coverage - Varies from Country to Country with a minimum of 80% coverage (24 countries, mostly European).

Various verification elements can be used. Examples might include applicant data such as name, address, phone, etc. Multiple methods could be used for verification include integrated solutions utilizing API (XML Application Programming Interface) or sending batches of requests.

- Verification and Authentication requirements would be based on TLD operator requirements or specific criteria.*
- Based on required WHOIS Data; registrant contact details (name, address, phone)*
- If address/ZIP can be validated by VAULT, the validation process can continue (North America +25 International countries)*
- If in-line processing and registration and EPP/API call would go to the verification clearinghouse and return up to 4 challenge questions.*
- If two-step registration is required, then registrants would get a link to complete the verification at a separate time. The link could be specific to a domain registration and pre-populated with data about the registrant.*
- If WHOIS data is validated a token would be generated and could be given back to the registrar which registered the domain.*
- WHOIS data would reflect the Validated Data or some subset, i.e., fields displayed could be first initial and last name, country of registrant and date validated. Other fields could be generic validation fields much like a "privacy service".*
- A "Validation Icon" customized script would be sent to the registrants email address. This could be displayed on the website and would be dynamically generated to avoid unauthorized use of the Icon. When clicked on the Icon would show limited WHOIS details i.e. Registrant: jdoe, Country: USA, Date Validated: March 29, 2011, as well as legal disclaimers.*
- Validation would be annually renewed, and validation date displayed in the WHOIS.*

Eligibility of Registrants are verified and subject to challenge during startup phases including Sunrise. We plan to gradually open up the namespace for general registration while continuing requiring registrants to abide by registration policies. Pre-verification processes will be simplified gradually with increased post-registration enforcement supported by anti-abuse measures as described above and in our application #28 Abuse Prevention and Mitigation.

We are prepared to explore to include additional safeguards and moderate the pre-verification processes where appropriate in consultation with ICANN and the GAC.

<p>7. In case of doubt with regard to the authenticity of licenses or credentials, Registry Operators should consult with relevant national supervisory authorities, or their equivalents.</p>
--

GAC Advice Response Form for Applicants

We are supportive of and fully prepared to be compliant with the advice.

As mentioned in 4. above, we are prepared to work with the GAC and GAC members to identify relevant authorities, organizations and bodies to refer to for various processes, including to assess authenticity and consider appropriateness of activities for domain registrations.

We are prepared to explore to include additional safeguards and to identify and work closely with other relevant authorities where appropriate in consultation with ICANN and the GAC.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

We are supportive of, fully prepared to be, and believe that our proposal is already compliant with the advice.

That being said, we again emphasize that within the current ICANN gTLD Registry-Registrar framework, the Registry should rely on the Sponsoring Registrar to connect with registrants. Many Registrars feel that it is inappropriate for the Registry to directly contacting the registrant. Therefore, while we will proactively check compliance, in terms of enforcement, we intend to work closely with Registrars to administer corrective measures.

Furthermore, we will develop and implement processes for community, industry and/or public reporting of compliancy issues. These have been included in our responses to #28 and #29 of our application.

We are prepared to explore to include additional safeguards and processes where appropriate in consultation with ICANN and the GAC.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	myLTD GmbH
Application ID	1-1013-19866
Applied for TLD (string)	LTD

Response:

myLTD GmbH (myLTD), as an applicant for the .LTD TLD, is pleased to submit these comments regarding the GAC Communiqué from the Beijing meeting.

myLTD supports the efforts of ICANN and the Governmental Advisory Committee (GAC) to deploy the new TLDs in a safe, secure and responsible manner. As detailed in our application, myLTD will design and position the .LTD TLD to be known as one of the premiere professional resources on the Internet. The mission of the .LTD TLD is to provide businesses a namespace on the Internet to establish meaningful and relevant identities and to promote their LTD entity. The primary purpose is to foster a sense of professionalism and trust among customers, businesses and organizations.

We appreciate the effort of the GAC in preparing the Beijing Communiqué as well as the opportunity presented by ICANN to offer our comments.

myLTD in general supports many of the elements of the GAC advice, including: WHOIS verification and checks; mitigations for abusive activity; security checks and documentation; prompt addressing of complaints; and the establishment of specific consequences for activity that violates myLTD policies. Above all, myLTD has already provided an Acceptable Use Policy (registrants have to comply with all applicable law) as part of its Public Interest Commitment (PIC).

myLTD has consulted relevant authorities on issues which were raised in the application process. Furthermore, we will operate in accordance with all applicable laws in relevant respective jurisdictions.

myLTD understands the need for adequate consumer protections upon the deployment of new TLDs, and we believe our application for the .LTD TLD as a corporate identifier meets or exceeds

GAC Advice Response Form for Applicants

ICANN's requirements in this area. Additionally, myLTD has submitted the Public Interest Commitment (PIC); "Only companies that are registered as LTD qualify to be a registrant of a .LTD domain name. Such registration must be granted by a governmental body, or an organization authorized by a governmental body to issue such registration".

With respect to the advice contained in the GAC Communiqué, we generally support the comments of the New TLD Applicant Group (NTAG), which will be submitted separately.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	DOMAIN ROBOT SERVICOS DE HOSPEDAGEM NA INTERNET LTDA
Application ID	1-1013-35966
Applied for TLD (string)	LTDA

Response:

DOMAIN ROBOT SERVICOS DE HOSPEDAGEM NA INTERNET LTDA (DOMAIN ROBOT), as an applicant for the .LTDA TLD, is pleased to submit these comments regarding the GAC Communiqué from the Beijing meeting.

DOMAIN ROBOT supports the efforts of ICANN and the Governmental Advisory Committee (GAC) to deploy the new TLDs in a safe, secure and responsible manner. As detailed in our application, DOMAIN ROBOT will design and position the .LTDA TLD to be known as one of the premiere professional resources on the Internet. The mission of the .LTDA TLD is to provide businesses a namespace on the Internet to establish meaningful and relevant identities and to promote their LTDA entity. The primary purpose is to foster a sense of professionalism and trust among customers, businesses and organizations.

We appreciate the effort of the GAC in preparing the Beijing Communiqué as well as the opportunity presented by ICANN to offer our comments.

DOMAIN ROBOT in general supports many of the elements of the GAC advice, including: WHOIS verification and checks; mitigations for abusive activity; security checks and documentation; prompt addressing of complaints; and the establishment of specific consequences for activity that violates DOMAIN ROBOT policies. Above all, DOMAIN ROBOT will have an Acceptable Use Policy (registrants have to comply with all applicable law) as part of its commitment.

DOMAIN ROBOT has consulted relevant authorities on issues which were raised in the application process. Furthermore, we will operate in accordance with all applicable laws in relevant respective jurisdictions.

GAC Advice Response Form for Applicants

DOMAIN ROBOT understands the need for adequate consumer protections upon the deployment of new TLDs, and we believe our application for the .LTDA TLD as a corporate identifier meets or exceeds ICANN’s requirements in this area. Additionally, DOMAIN ROBOT is willing to limit registrant eligibility to “only companies that are registered as a LTDA. Such registration must be granted by a governmental body, or an organization authorized by a governmental body to issue such registration”.

With respect to the advice contained in the GAC Communiqué, we generally support the comments of the New TLD Applicant Group (NTAG), which will be submitted separately.

Response:

Afilias, as an Applicant for the 31 TLDs, is pleased to submit these comments regarding the GAC Communiqué from the Beijing meeting. We appreciate the effort of the GAC in preparing the Beijing Communiqué as well as the opportunity presented by ICANN to offer our comments.

Afilias supports the efforts of ICANN and the Governmental Advisory Committee (GAC) to deploy the new TLDs in a safe, secure and responsible manner. As detailed in our applications, Afilias has already included many measures to address the issues raised by the GAC, and we intend to work closely with the ICANN and GAC members on any additional areas to further enhance internet security and stability.

We understand the need for adequate consumer protections upon the deployment of new TLDs, and we believe our applications meet or exceed ICANN's requirements in this area. Additionally, we have already submitted Public Interest Commitments (PICs) on some of our applications and would consider additional PICs, as is deemed appropriate for each of the TLD strings.

Respondent:

Applicant Name	AVERY DENNISON CORPORATION
Application ID	1-1015-61446
Applied for TLD (string)	avery

Response:

To ICANN Board for consideration.

We understand your request to receive additional feedback from applicants in regards to the recommendation made by the GAC as stated in the "Beijing Communiqué".

Please feel free to share this feedback below with the GAC.

We recognize the GAC concerns particularly in regard to implementing safeguard mechanisms as described in the applications for instance in question 28, 29 and 30a/b into the gTLD agreement (contract between ICANN and us individual applicants/registry operators.)

As a large and recognized brand within our industry, we expect to be held responsible to operate our TLD(s) in a manner that is in compliance with local and international legislation. We have emphasized the need for a safe zone, where the internet users, when accessing websites under (any of) our gTLDs() will be certain that they have reached an authorized website, promoting our industry specific and industry regulated services.

We further support any new mechanisms and policies that will strengthen the WHOIS Accuracy and are willing to implement that into our Public interest commitment (spec 11) as part of the new gTLD agreements we are to enter with ICANN.

Thank you very much for this opportunity to highlight our view on these issues.

Applicant Name	RR Bowker LLC
Application ID	1-1020-75316
Applied for TLD (string)	book

Response:

RR Bowker LLC (Bowker), as an Applicant for the .book TLD, is pleased to submit these comments regarding the GAC Communiqué from the Beijing meeting.

Bowker supports the efforts of ICANN and the Governmental Advisory Committee (GAC) to deploy the new TLD’s in a safe, secure and responsible manner. Bowker is a global provider of industry-leading tools and services that make books easier for people to discover, evaluate, order, and experience, as well as a provider of services to publishers that deliver key insights of readership worldwide.

Bowker believes an “open” .book registry will broaden and facilitate the connection between readers and content, authors, publishers, booksellers, and book communities worldwide, significantly enhancing the discovery of books & e-books. Therefore, our mission & goal of the .book registry is to connect readers with content, authors, publishers, and booksellers worldwide to significantly enhance the discovery of books & ebooks, or related content and services.

We appreciate the effort of the GAC in preparing the Beijing Communiqué as well as the opportunity presented by ICANN to offer our comments.

Bowker understands the need for adequate consumer protections upon the deployment of new TLD’s, and we believe our application for an open .book TLD meets or exceeds ICANN’s requirements in this area. With respect to the advice contained in the GAC Communiqué, we generally support the comments of the New TLD Applicant Group (NTAG), which have been will be submitted separately.

Thank you for the opportunity to comment on this important topic.

Respondent:

Applicant Name	ACO Severin Ahlmann GmbH & Co. KG
Application ID	1-1026-17004
Applied for TLD (string)	ACO

Response:

Summary

ACO SEVERIN AHLMANN GMBH & CO. KG welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

ACO SEVERIN AHLMANN GMBH & CO. KG welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .ACO by ACO SEVERIN AHLMANN GMBH & CO. KG

ACO SEVERIN AHLMANN GMBH & CO. KG would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by ACO SEVERIN AHLMANN GMBH & CO. KG for .ACO based on General Safeguards

ACO SEVERIN AHLMANN GMBH & CO. KG, the applicant for the .ACO top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - ACO SEVERIN AHLMANN GMBH & CO. KG will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. ACO SEVERIN AHLMANN GMBH & CO. KG will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

2. Mitigating abusive activity - ACO SEVERIN AHLMANN GMBH & CO. KG will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, ACO SEVERIN AHLMANN GMBH & CO. KG will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If ACO SEVERIN AHLMANN GMBH & CO. KG identifies security risks that pose an actual risk of harm, ACO SEVERIN AHLMANN GMBH & CO. KG will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - ACO SEVERIN AHLMANN GMBH & CO. KG will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. ACO SEVERIN AHLMANN GMBH & CO. KG will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - ACO SEVERIN AHLMANN GMBH & CO. KG will ensure that there is a mechanism for making complaints to ACO SEVERIN AHLMANN GMBH & CO. KG that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, ACO SEVERIN AHLMANN GMBH & CO. KG shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

ACO SEVERIN AHLMANN GMBH & CO. KG would like to note that registration policies will be setup according to this request.

ACO SEVERIN AHLMANN GMBH & CO. KG would like to note that .ACO is not a generic term and therefore the GAC Advice on exclusive access of generic terms does not apply. Furthermore ACO SEVERIN AHLMANN GMBH & CO. KG would like to state that the .ACO is not in the public interest, but a representation of Intellectual property rights of ACO SEVERIN AHLMANN GMBH & CO. KG.

However ACO SEVERIN AHLMANN GMBH & CO. KG reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on community feedback including the GAC.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Symantec Corporation
Application ID	1-1027-19707
Applied for TLD (string)	CLOUD

Response:

Symantec Corporation (“Symantec”) is a leading global provider of information security and protection, providing security, storage, and systems management solutions to help our customers secure and manage their information and identities. Symantec is committed to fulfilling our core purpose of protecting our customers’ information and identities with full attention to and respect for ethical operation, the environment, and positive societal impact.

In the business-critical areas of security and data protection, Symantec provides a backbone of strength that makes it safe to consume services from the cloud. In line with our overarching mission, Symantec plans to operate the .CLOUD gTLD as a trusted, hierarchical, secure, and intuitive namespace to support Symantec’s cloud computing services. Symantec will operate .CLOUD as a closed registry. In doing so, Symantec will conduct all operations within .CLOUD with our commitment to consumer and data protection expected from the world’s leader in security and with adherence to a strict code of conduct that includes prohibitions against:

- Counterfeiting, piracy, and other forms of intellectual property theft,
- Phishing or other forms of online fraud,
- The distribution of malware or operation of botnets, and
- The provision of incomplete or inaccurate WHOIS information.

The operation of a closed registry will allow Symantec to collect any data within .CLOUD using appropriate security controls and with adherence to online privacy standards. In doing so, Symantec will create a safe online space for consumers, free from many of the risks associated with conducting business online.

Finally, given Symantec’s dedication to consumer protection, data security, and corporate responsibility, we maintain relationships with regulators within the technology and security sectors. Symantec will continue to engage these entities in conjunction with the operation of the .CLOUD gTLD.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee’s Beijing Communiqué identifies the “Intellectual Property” sector, including .CLOUD, as a regulated sector to which additional safeguards should apply and advises that “for strings representing generic terms, exclusive registry access should serve a public interest goal.” We hope this quells any concerns that the Board might have in association with the .CLOUD gTLD.

We invite further dialogue with the Board if it has any remaining concerns regarding Symantec’s .CLOUD application.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Symantec Corporation
Application ID	1-1027-34295
Applied for TLD (string)	ANTIVIRUS

Response:

Symantec Corporation (“Symantec”) is a leading global provider of information security and protection, providing security, storage, and systems management solutions to help our customers secure and manage their information and identities. Symantec is committed to fulfilling our core purpose of protecting our customers’ information and identities with full attention to and respect for ethical operation, the environment, and positive societal impact.

In line with our overarching mission, Symantec plans to operate the .ANTIVIRUS gTLD as a trusted, hierarchical, secure, and intuitive namespace to support Symantec’s antivirus software. Symantec will operate .ANTIVIRUS as a closed registry. In doing so, Symantec will conduct all operations within .ANTIVIRUS in line with a strict code of conduct that includes prohibitions against:

- Counterfeiting, piracy, and other forms of intellectual property theft,
- Phishing or other forms of online fraud,
- The distribution of malware or operation of botnets, and
- The provision of incomplete or inaccurate WHOIS information.

In doing so, Symantec will create a safe online space for consumers, free from many of the risks associated with conducting business online.

The Governmental Advisory Committee’s Beijing Communiqué advises that “for strings representing generic terms, exclusive registry access should serve a public interest goal.” In association with this recommendation, the Governmental Advisory Committee (GAC) identifies .ANTIVIRUS as a generic string seeking exclusive registry access.

We hope this quells any concerns that the Board might have associated with the .ANTIVIRUS gTLD. We invite further dialogue with the Board if it has any remaining concerns regarding Symantec’s .ANTIVIRUS application.

Respondent:

Applicant Name	Aesthetics Practitioners Advisory Network Pty Ltd
Application ID	1-1028-58177
Applied for TLD (string)	.salon

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the "Beijing Advice") and focusses specifically on the publication of the "Safeguards Applicable to all New gTLD's" (the "Safeguards") as contained in Annex 1 of the Beijing Advice.

In short, we are both disappointed and frustrated that the GAC has chosen to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that "the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities." We believe the provision of the Beijing Advice covering all new gTLD applications constitutes a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted.

That being the case, we are faced with a choice between a lesser of two evils. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add to such by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

Conversely, to avoid delay, we are being asked to agree to provisions in the Registry Agreement ("RA") that appear at first instance to be both ill-defined and over broad. The RA itself now rather resembles a contract of adhesion - we are in the territory of take it or leave it.

Faced with such, we have no option but to agree to the Safeguards in part as further described below. However, we would flag that such agreement and response is made under severe duress. Safeguards

GAC Advice Response Form for Applicants

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO's creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate that the Board would acquiesce to this GAC request while fully aware that policy work on this very sensitive issue is currently underway and that the outcome will be enforced on successful new gTLD applicants through the Registry Agreement. We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. Such requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Put bluntly, Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested "technical analysis". Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the Safeguard contains sufficient elasticity of wording as to be rendered meaningless.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of such to our TLD on the basis that it is acknowledged that the bar of complaint "handling" is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD. Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

GAC Advice Response Form for Applicants

If ICANN were so minded, we would be willing to consider wording of the following order:-
"Registry Operator will adhere to the following "Safeguards Applicable to all New gTLD's" as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6"

Having explained above that Safeguards 1 and 4 are redundant, such would mean that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be eminently reasonable arguments above.

We trust that the above middle ground will be acceptable to you and once again respectfully request that paramount in this instance be the avoidance of any further delay.

Yours faithfully

Mark D Viney

Director APAN P/L

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	punkt.wien GmbH
Application ID	1-1030-79531
Applied for TLD (string)	wien

Response:

SUMMARY

punkt.wien GmbH welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

punkt.wien GmbH welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non - discrimination.”

*** COMMUNITY-BASED APPLICATION FOR <.WIEN> BY punkt.wien GmbH ***

We welcome and support the GAC Advice as published on April 11, 2013, section IV” GAC Advice to the ICANN Board”, 1.e. “Community Support for Applications”:

The GAC advises the Board: i. that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

GAC Advice Response Form for Applicants

WE SERVE THE INTERESTS OF THE COMMUNITY AND THE PUBLIC

Our application for the string <.WIEN> is a community-based application. Members of the <.WIEN> Community are natural persons, legal persons, organizations or associations of persons, if they can demonstrate that they have an economic, cultural, touristical, historical, social or any other connection to the Austrian capital WIEN.

We have been successfully working since 2011 on building a long-lasting relationship to the various stakeholders of the respective community including

1. City organizations and authorities;
2. Commercial associations;
3. Companies;
4. Civil society organizations.

The community members have expressed a collective and clear supporting opinion on our application by supporting documents.

We have consulted with all relevant public and private entities that make up the community.

GENERAL PRINCIPLES OF OPERATIONS FOR <.WIEN> BY punkt.wien GmbH

punkt.wien GmbH would like to state that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights (<http://www.un.org/en/documents/udhr/index.shtml>). In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.”

3. We will operate the TLD in an open manner consistent with general principles of openness and non - discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

DETAILED COMMITMENTS BY punkt.wien GmbH FOR <.WIEN> BASED ON GENERAL SAFEGUARDS

punkt.wien GmbH, the applicant for the <.WIEN> top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non - discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - punkt.wien GmbH will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. COMPANY will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

2. Mitigating abusive activity - punkt.wien GmbH will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

3. Security checks - While respecting privacy and confidentiality, punkt.wien GmbH will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If punkt.wien GmbH identifies security risks that pose an actual risk of harm, punkt.wien GmbH will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

4. Documentation - punkt.wien GmbH will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. punkt.wien GmbH will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - punkt.wien GmbH will ensure that there is a mechanism for making complaints to punkt.wien GmbH that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, punkt.wien GmbH shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be

GAC Advice Response Form for Applicants

used in breach of applicable law; these consequences should include suspension of the domain name.

punkt.wien GmbH would like to note that registration policies will be setup according to this request.

However punkt.wien GmbH reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	HOTEL Top-Level-Domain S.à.r.l.
Application ID	1-1032-95136
Applied for TLD (string)	.HOTEL

Response:

Summary

Hotel Top-Level-Domain Sarl welcomes the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or fail to sufficiently recognize and incorporate public policy issues such as consumer protection.

Hotel Top-Level-Domain Sarl welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- * be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- * respect all substantive and procedural laws under the applicable jurisdictions.
- * be operated in an open manner consistent with general principles of openness and non - discrimination.”

*** Community-based application for .HOTEL by Hotel Top-Level-Domain Sarl ***

We welcome and support the GAC Advice as published on April 11, 2013, section IV” GAC Advice to the ICANN Board”, 1.e. “Community Support for Applications”:

The GAC advises the Board: i. that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

GAC Advice Response Form for Applicants

**** We serve the Interests of the Community and the Public ****

Our application for the string .HOTEL is a community-based application. The Community for the .HOTEL top-level domain consists of entities that are hotels, operate hotels or represent hotels through an association. This Hotel Community intends to use .hotel domain names for their presentation, communication and commerce, and/or promote the hotel community online. We have been successfully working since 2008 on building a long-lasting relationship to the various stakeholders of this community including hotel associations worldwide, individual hotels and other hotel operators such as hotel chains.

The community members have expressed a collective and clear supporting opinion on our application by supporting documents.

We have consulted with multiple relevant entities that make up the community worldwide. According to our eligibility requirements which are in line with the requirements for community applications as stated in the AGB, .hotel domains will be available for registration to all companies which are member of the Hotel Community on a local, national and international level. We will not give an undue preference to any registrars or registrants, including ourselves, and will not subject registrars or registrants to an undue disadvantage.

***** General principles of operations for .HOTEL by Hotel Top-Level-Domain Sarl *****

Hotel Top-Level-Domain Sarl would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights (<http://www.un.org/en/documents/udhr/index.shtml>). In this respect we would like to emphasize two principles of the UN declaration of rights:

-Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.

- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

As stated in our application, we require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non - discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.

- To foster diversity, encourage competition, and enhance the utility of the DNS.

- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

GAC Advice Response Form for Applicants

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by Hotel Top-Level-Domain Sarl for .HOTEL based on General Safeguards ***

Hotel Top-Level-Domain Sarl, the applicant for the .HOTEL top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non - discrimination.

The Safeguards are in detail:

1. WHOIS verification and checks – As described in our answer to question 28 in our application, Hotel Top-Level-Domain Sarl will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data every month. We will cooperate with registrars on the basis of the Registrar Accreditation Agreement to ensure WHOIS data accuracy. We will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity – Also described in our answer to Q28 is that Hotel Top-Level-Domain Sarl will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, Hotel Top-Level-Domain Sarl will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets, as described in our answer to Q28. If Hotel Top-Level-Domain Sarl identifies security risks that pose an actual risk of harm, Hotel Top-Level-Domain Sarl will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - As we have stated in our answer to Q28 Hotel Top-Level-Domain Sarl will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Hotel Top-Level-Domain Sarl will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - As we have stated in our answer to Q28 Hotel Top-Level-Domain Sarl will ensure that there is a mechanism for making complaints to Hotel Top-Level-Domain Sarl that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, we have described in our answer to Q28 that we will ensure that there are real and immediate

GAC Advice Response Form for Applicants

consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Hotel Top-Level-Domain Sarl would like to note that our registration policies already reflect these requests. In addition, security issues have been extensively dealt with in our answer to Question 30: "Afilias [our registry backend service provider] aggressively and actively protects the registry system from known threats and vulnerabilities, and has deployed an extensive set of security protocols, policies and procedures to thwart compromise."

Hotel Top-Level-Domain Sarl would like to note that .hotel will not be operated as an exclusive registry access TLD limited to Hotel Top-Level-Domain Sarl as being the only registrant. Therefore the GAC Advice on exclusive access of generic terms does not apply to .hotel by Hotel Top-Level-Domain Sarl . 4e

We were asked to provide a statement to the GAC Advice without knowing the decision by the ICANN New gTLD Program Committee. Therefore Hotel Top-Level-Domain Sarl reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on community feedback including the GAC.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	fTLD Registry Services, LLC
Application ID	1-1035-13873
Applied for TLD (string)	.bank

Response:

fTLD Registry Services, LLC (fTLD), the community-based applicant for the .bank and .insurance generic Top-Level Domains (gTLDs), is providing this response to the recently issued Governmental Advisory Committee (GAC) Advice on New gTLDs as required by Section 3.1 of the Applicant Guidebook. fTLD acknowledges the significant undertaking that was before GAC for it to meet its commitment to provide Advice by 13 April 2013, and we appreciate the care and level of detail that it provided in its [Beijing Communiqué](#).

fTLD is owned, operated and governed by members of the financial services community and is committed to operating financial gTLDs fairly, transparently and in a manner that serves and protects the community and the consumers/Internet users it serves. It was at the community’s urging that community-based applications for .bank and .insurance should be filed to protect the community and it is for that reason that fTLD was formed. As such, we are pleased to see the GAC’s recognition and affirmation of the value of community-based applications in its statement, “that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.”

Regarding GAC’s Advice on safeguards, fTLD supports those identified for all new gTLDs and the additional safeguards for gTLDs that represent regulated markets. In fact, most of the safeguards are indicative of activities that fTLD anticipated it would need to implement given the public interest implications of .bank and .insurance. This is why the American Bankers Association and The Financial Services Roundtable advocated on behalf of the community for additional safeguards and fTLD ultimately included measures to address many of the safeguards that in the end became GAC Advice for the .bank and .insurance applications. Following the public comment period on, and the ICANN Board’s consideration of GAC Advice,

GAC Advice Response Form for Applicants

New Generic Top-Level
Domains

fTLD is committed to implementing approved safeguards including those that will require some modifications to fTLD's procedures and/or systems (see Annex).

If fTLD has been approved to operate new gTLDs, it will be bound by Section 2.19, Operations of Registry Operator to TLD Community, and Specification 12, Community Registration Policies, of its Registry Agreement with ICANN. It is through these contractual provisions that fTLD will fulfill on its commitments to the community including those that were included in its applications and be subject to ICANN's compliance activities including, but not limited to, the [Registry Restrictions Dispute Resolution Procedure](#).

fTLD continues to believe that the introduction of new gTLDs has the potential to enhance consumer choice, promote competition and to foster innovation in the domain name system. We also firmly believe that in the cases of gTLDs that have unique trust implications, including those identified by the GAC, they must only be awarded to a trusted member of the community that will operate them with strict registration restrictions and in a manner that puts the public interest above the maximization of revenue.

Respectfully,

A handwritten signature in blue ink that reads "Craig S. Schwartz". The signature is fluid and cursive, with a long horizontal stroke extending from the end of the name.

Domains

Annex

GAC ADVICE	FTLD RESPONSE
<p>In those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.</p>	<p>fTLD agrees and notes that our applications have extensive endorsements from the community. See list of current endorsers at http://www.ftld.com/endorsers.html.</p>
<p>A. Safeguards Applicable to all New gTLDs</p>	
<p>1. WHOIS (registration information) and checks: should be conducted on a statistically significant basis at least twice a year.</p>	<p>fTLD agrees and would like to highlight that our applications go above and beyond this requirement including a commitment to verify all WHOIS records at least semi-annually in compliance with the Enhanced Security Standards provided to ICANN on 11 December 2011 (see http://www.icann.org/en/correspondence/aba-bits-to-beckstrom-crocker-20dec11-en.pdf). See Standard #23.</p>
<p>2. Mitigating abusive behavior: acceptable use and/or abuse policy to be defined.</p>	<p>fTLD agrees and notes that our applications are in compliance with requirements #3 and #16 in the above referenced Enhanced Security Standards.</p>
<p>3. Security checks: regular checks should be done to assess if domains are being used to perpetrate security threats and registries should suspend domains if registrar won't.</p>	<p>fTLD agrees and has affirmatively addressed this point in our response to question 20(e).</p>
<p>4. Documentation: statistical reports that provide the number of inaccurate WHOIS records or security threats should be maintained and provided to ICANN upon request.</p>	<p>fTLD commits to making this information available to ICANN at their request based upon the information in items A1 and A3 that will be collected in accordance with representations made in our applications.</p>
<p>5. Making and handling complaints: there should be a mechanism for making complaints to the registry operator about inaccurate WHOIS information and/or domains being used for malicious activity or perpetuating security risks.</p>	<p>fTLD agrees and will modify the ticketing system identified in our response to Question 28 to include inaccurate WHOIS.</p>
<p>6. Consequences: there should be real and immediate consequences for providing false WHOIS information and/or if the domain is being used in breach of applicable law.</p>	<p>fTLD agrees and has set forth in our response to Question 28 fTLD's policies and procedures for domain names used in violation of the acceptable use/abuse policies.</p>
<p>B. Safeguards for New gTLDs Linked to Regulated or Professional Sectors</p>	
<p>1. Registry acceptable use policy must require registrants to comply with all applicable laws including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic</p>	<p>fTLD agrees and in responses to Questions 20(e) and 28 prohibit use of the domain for any purposes prohibited by the laws of the jurisdiction(s) in which the registrant does business and further lists examples of prohibited activities.</p>

GAC Advice Response Form for Applicants

<p>farming, disclosure of data, and financial disclosures.</p>	
<p>2. Registry operators will require registrars at the time of registration to notify registrants of the acceptable use policy.</p>	<p>fTLD agrees and notes that our applications are in compliance with requirement #19 in the above referenced Enhanced Security Standards.</p>
<p>3. Registry Operators will require registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.</p>	<p>fTLD agrees and this requirement will be part of the registration agreement registrants sign with their registrars.</p>
<p>4. Establish a working relationship with the relevant regulatory, or industry self-regulatory, body including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.</p>	<p>fTLD agrees and has already begun this effort. This activity is anticipated as it relates to fTLD's ability to verify registrants. fTLD may however be limited by the relevant regulatory or industry self-regulatory bodies voluntary cooperation with fTLD.</p>
<p>5. Registrants must be required by the registry operator to provide a single point-of-contact for the notification of complaints or reports of registration abuse as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.</p>	<p>fTLD agrees in principle and Enhanced Security Standards #8 and #9 in part address this for registry operators and registrars and this could be expanded to registrants. fTLD commits to work with relevant regulatory or industry self-regulatory bodies identified above to collect the relevant contact details to address the concerns of the GAC.</p>
<p>C. Additional Safeguards for New gTLDs Associated with Market Sectors that have clear and/or Regulated Entry Requirements</p>	
<p>1. At the time of registration the registry operator must verify and validate the registrants' authorizations, charters, licenses and/or other credentials for participation.</p>	<p>fTLD agrees and Enhanced Security Standard #22 incorporated into our applications addresses this item.</p>
<p>2. In case of doubt with regard to authenticity of licenses or credentials, registry operator should consult with relevant national supervisory authorities, or other equivalents.</p>	<p>fTLD agrees. This item is explicitly linked to safeguards C1 and implicitly linked to B4.</p>
<p>3. Registry operator must conduct periodic, post-registration checks with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.</p>	<p>fTLD agrees and has proactively responded to this issue in response to Question 20(e) concerning auditing of domain names to ensure compliance with acceptable use/abuse policies.</p>
<p>4. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars or registrants to an undue disadvantage.</p>	<p>fTLD affirms its commitment that its gTLDs will be operated fairly, transparently, without undue preference and in the best interest of the community.</p>

4. The registry operator should administer access in these kinds of registries in a transparent way that does not give an undue preference to any registrars or registrants, including itself, and shall not subject registrars or registrants to an undue disadvantage.	fTLD affirms its commitment that its gTLDs will be operated fairly, transparently, without undue preference and in the best interest of the community.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Top Level Domain Holdings Limited
Application ID	1-1038-5963
Applied for TLD (string)	.dds

Response:

Top Level Domain Holdings Limited (TLDH) submitted public interest commitments (PICs) prior to the GAC Beijing Communiqué which address the GAC's concerns regarding abusive activity.

We will have a single point of contact, as discussed in our PICs, as well as community policing and an ombudsperson. There will be a single point of contact for allegations of abuse to be submitted to, making it easy for the community and for law enforcement to have their concerns quickly addressed.

Finally, since .dds is a string that refers to a regulated industry, we will work with appropriate governing and/or regulatory bodies to ensure appropriate identification is presented with registration. We will require that a potential registrant enter their unique dentistry license number as well as indicate the jurisdiction to which the number relates.

Response:

Following GAC advice to the ICANN Board ("GAC Communiqué – Beijing") regarding the GAC's concerns about the string .free, Top Level Domain Holdings Limited has withdrawn its application for .free.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	National Association of Boards of Pharmacy
Application ID	1-1040-55064
Applied for TLD (string)	.PHARMACY

Response:

In its Beijing Communiqué, the ICANN Governmental Advisory Committee (GAC) identifies the “Health and Fitness” sector, including .PHARMACY, as a regulated industry to which additional safeguards should apply. National Association of Boards of Pharmacy (“NABP”) agrees, and would like to affirm to the ICANN Board our commitment to operating the .PHARMACY gTLD in a manner that reflects our longstanding commitment to promoting public health and patient safety.

NABP is an impartial professional organization that supports the state boards of pharmacy in creating uniform regulations to protect public health. Specifically, NABP recognizes the ongoing and critical need for patients’ medications to be managed by a licensed pharmacist, and for their medications to be appropriately sourced through safe channels, in accordance with applicable laws and standards of care and in order to protect and serve the collective interests of patients as consumers.

NABP plans to operate .PHARMACY in line with this core mission of promoting public health and patient safety. Because the means to easily recognize safe online pharmacies is important for consumers worldwide, NABP will make the new domain available to legitimate online pharmacies and related entities that are located in the United States as well as in other countries. This will create a trusted, hierarchal, and intuitive namespace for legitimate Internet pharmacies and other prescription drug related entities worldwide, including but not limited to:

- Independent community pharmacies,
- Chain pharmacies and any retailers offering pharmacy services,
- Internet pharmacies,
- Pharmacy benefits management companies,
- Veterinary pharmacies,
- Schools and colleges of pharmacy and continuing professional education providers,
- Wholesale drug distributors,

GAC Advice Response Form for Applicants

- Pharmaceutical manufacturers,
- Durable medical equipment, prosthetics, orthotics, and supplies providers,
- Prescription drug-related patient advocacy and consumer education groups,
- Prescription drug information and pharmacy referral sites, and
- Medical professionals advertising services related to a prescription drug.

As such, the .PHARMACY gTLD will provide a powerful tool to educate consumers, distinguish legitimate Internet pharmacies from the thousands of rogue Internet drug outlets, and reinforce the value of purchasing medications only from trusted online sources. A total of 19 organizations have already expressed their support of NABP's vision and plan for operating .PHARMACY.

Through its Advisory Committee, NABP will work with members of the pharmacy community to establish core (common) standards of operation that will be required of all domain registrants within the .PHARMACY gTLD, consistent with the purpose of the .PHARMACY gTLD and the mission of public health. This will include the development of guidelines for vetting each Internet pharmacy or other prescription drug-related entity applying for a .PHARMACY name and the development of a code of conduct and a set of best practices for the .PHARMACY gTLD.

NABP will operate .PHARMACY using a tightly controlled registration policy, that restricts second-level registrations within the gTLD to licensed pharmacies and prescription drug-related entities that are in good standing and in compliance with all applicable laws in the jurisdictions in which they dispense, ship, or sell medications and that agree to conduct business according to all standards of operation. In doing so, we can ensure that all operations within the gTLD will be conducted in line with a strict code of conduct that includes prohibitions against the following types of activity:

- Infringement of intellectual property,
- Online fraud,
- Engagement in spam,
- Harassment,
- Installation of viruses or malicious code, and
- Provision of incomplete or inaccurate registration data.

Additionally, a restricted registration policy allows NABP to assure pharmaceutical consumers that medications sold in .PHARMACY will be sourced through safe channels and that any health or medical data collected within .PHARMACY will be done using appropriate security controls and with adherence to online privacy standards. In doing so, NABP aims to create a safe online space for consumers, free from many of the risks associated with buying medicine online.

Under the proposed plan, NABP and stakeholders would also implement steps to educate consumers and build recognition and trust in the .PHARMACY gTLD. The consumer education campaign would seek to make .PHARMACY the recognized sign of a legitimate, safe, trusted Internet pharmacy, just as many Internet users now recognize .GOV as an official site of a US government agency, or .EDU as an official Web site for an institution of higher education. Building consumer trust in the proposed .PHARMACY gTLD will help protect consumers by empowering them with the knowledge to locate legitimate Internet pharmacies and to avoid illegally operating Internet drug outlets. In the words of NABP president, Michael A. Burleson, RPh. "The ultimate benefactors of NABP's vision for this new gTLD will be the health care community and patients worldwide, who will be assured that all pharmacy sites ending in the .PHARMACY gTLD are safe and legitimate... By vetting .PHARMACY registrants for compliance

with international standards, NABP seeks to protect patients worldwide from the health risks that can result when drug sellers circumvent supply chain safeguards.”

Finally, given NABP’s longstanding commitment to public health, we maintain relationships with pharmaceutical regulators, standard setting bodies, and law enforcement agents, both within the United States and globally. In developing its .PHARMACY proposal, NABP has partnered with international regulators, pharmacy organizations, and law enforcement agencies that share our concern about illegal online drug sellers distributing products that endanger patient health. NABP has worked with these actors in setting the standards of operation for registrants within .PHARMACY and will continue to engage these entities in conjunction with the operation of the .PHARMACY gTLD.

We hope this response to the GAC’s Beijing Communiqué quells any concerns that the Board might have in association with the .PHARMACY gTLD. We invite further dialogue with the Board if it has any remaining concerns regarding NABP’s .PHARMACY application.

(1) Today, the vast majority of Web sites selling prescription drugs online are doing so illegally – many of them selling unapproved, substandard, and counterfeit medicine. NABP recently reviewed nearly 10,000 Internet drug outlets selling prescription medications and found nearly 97% to be out of compliance with pharmacy laws and practice standards established in the United States to protect the public health. Of these Web sites identified as Not Recommended, nearly half offer foreign or non-Food and Drug Administration-approved drugs, and many distribute dangerous counterfeits to unsuspecting consumers. To read the full report, please visit:

http://www.nabp.net/system/redactor_assets/documents/453/NABP_Internet_Drug_Outlet_Report_Apr2013.pdf

(2) NABP received support on many levels from stakeholders who believe NABP to be best equipped to establish the .PHARMACY space as a secure and trustworthy destination where consumers can be sure the medications they buy online are authentic and safe. Stakeholders that have provided financial support or public endorsements for NABP’s .PHARMACY application include Eli Lilly and Company; Merck & Co., Inc.; Gilead; Janssen Therapeutics; Amgen Inc.; Alliance for Safe Online Pharmacies; British Brands Group; Boehringer Ingelheim; Drugdepot.com; DrugSource, Inc.; EnforceTheAct.org; European Alliance for Access to Safe Medicines; Indiana Board of Pharmacy; International Pharmaceutical Federation; Ipsen Pharma; LegitScript; National Association of Pharmacy Regulatory Authorities; North Dakota State Board of Pharmacy; Novo Nordisk, Inc.; RX Direct, Inc; and Sanofi. More details regarding support for .PHARMACY can be found here: <http://www.nabp.net/programs/pharmacy/pharmacy-and-nabp/coalition-support>.

(3) As a guideline, the standards that NABP currently employs in association with pharmacies conducting pharmacy service over the Internet and other businesses or persons conducting drug-related services over the internet are set forth here:

<http://www.nabp.net/programs/accreditation/e-advertiser-approval-program/standards>.

(4) “NABP’s Vision for .PHARMACY Generic Top-Level Domain Provides a Secure Online Space for Pharmacy Consumers Around the World.” Wall Street Journal. 15 April 2013. See Article:

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotSite Inc.
Application ID	1-1048-46315
Applied for TLD (string)	Site

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotHome Inc.
Application ID	1-1049-60075
Applied for TLD (string)	Home

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

Applied for TLD (string)	Website

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotShop Inc.
Application ID	1-1051-32260
Applied for TLD (string)	Shop

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotStore Inc.
Application ID	1-1052-82517
Applied for TLD (string)	Store

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dotsecure Inc.
Application ID	1-1053-59307
Applied for TLD (string)	Bank

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

Additional Safeguards for Category 1 strings associated with certain market sectors

We also agree with the GAC that certain strings are associated with market sectors which have clear and / or regulated entry requirements in multiple jurisdictions, and that additional safeguards should apply to this sub-set of strings. We submit that this TLD, .Bank is indeed a part of the sub-set of strings that require further targeted safeguards to address specific risks, and to bring registry policy in line with arrangements in place offline. We would urge the GAC and the ICANN board to review our application in its entirety to assess the strength and details of security measures and policies we have put in place in order to ensure that the registry policy is in line with arrangements in place offline.

That being said, we have addressed each of the safeguards recommended by the GAC as follows.

6. At the time of registration, the registry operator must verify and validate the registrants' authorizations, charters, licenses and / or other related credentials for participation in that sector.

Response: We acknowledge the GAC's concerns and submit that this safeguard is acceptable to us. As detailed in our application, verification and validation of the registrants' credentials will be a key function which will be performed by an external 3rd party agency. A quote from such a 3rd party service provider was also provided as part of our application, on the basis of which our business plans have been made. The selected 3rd party agency will be contractually required by us to verify and validate the potential registrants' licenses and credentials, in addition to a list of

GAC Advice Response Form for Applicants

other verifications such as domain validation, compliance with our Eligibility Restrictions and Name Selection Policy, and the individual registrants' authority to register the domain name.

We believe that a review of our application will serve to show that our plans for .Bank are extremely thorough and in line with the GAC's expectations.

7. In case of doubt with regard to the authenticity of licenses or credentials, registry operators should consult with relevant national supervisory authorities or their equivalents.

Response: We acknowledge the GAC's concerns above and submit that we will contractually require our 3rd party verification agency to clear any doubts with respect to authenticity of licenses or credentials by methods that include consulting with the relevant national supervisory authority or their equivalents.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Response: We acknowledge the GAC's concern with respect to ensuring that registrants' continue to comply with appropriate regulations and licensing requirements. We submit that we are willing to carry out the periodic post-registration checks such as those suggested by the GAC with the aim of ensuring that registrants continue to comply with our Eligibility Restrictions and other security policies.

That being said, we look forward to ICANN Board providing additional guidance about the details of such checks as per ICANN's requirements.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 14 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotBaby Inc.
Application ID	1-1054-95858
Applied for TLD (string)	Baby

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dotmaker Inc.
Application ID	1-1055-21389
Applied for TLD (string)	Law

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

GAC Advice Response Form for Applicants

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotDeals Inc.
Application ID	1-1056-93782
Applied for TLD (string)	Deals

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotNews Inc.
Application ID	1-1057-44086
Applied for TLD (string)	News

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

GAC Advice Response Form for Applicants

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotMusic Inc.
Application ID	1-1058-25065
Applied for TLD (string)	Music

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

GAC Advice Response Form for Applicants

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotHotel Inc.
Application ID	1-1059-97519
Applied for TLD (string)	Hotel

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotMedico TLD Inc.
Application ID	1-1060-13366
Applied for TLD (string)	Doctor

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

GAC Advice Response Form for Applicants

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC’s accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website.”

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

Additional Safeguards for Category 1 strings associated with certain market sectors

We also agree with the GAC that certain strings are associated with market sectors which have clear and / or regulated entry requirements in multiple jurisdictions, and that additional safeguards should apply to this sub-set of strings. We submit that this TLD, .Doctor is indeed a part of the sub-set of strings that require further targeted safeguards to address specific risks, and to bring registry policy in line with arrangements in place offline. We would urge the GAC and the ICANN board to review our application in its entirety to assess the strength and details of security measures and policies we have put in place in order to ensure that the registry policy is in line with arrangements in place offline.

That being said, we have addressed each of the safeguards recommended by the GAC as follows.

6. At the time of registration, the registry operator must verify and validate the registrants’ authorizations, charters, licenses and / or other related credentials for participation in that sector.

Response: We acknowledge the GAC’s concerns and submit that this safeguard is acceptable to us. As detailed in our application, verification and validation of the registrants’ credentials will be a key function which will be performed by an external 3rd party agency. A quote from such a 3rd party service provider was also provided as part of our application, on the basis of which our business plans have been made. The selected 3rd party agency will be contractually required by us to verify and validate the potential registrants’ licenses and credentials, in addition to a list of

GAC Advice Response Form for Applicants

other verifications such as domain validation, compliance with our Eligibility Restrictions and Name Selection Policy, and the individual registrants' authority to register the domain name.

We believe that a review of our application will serve to show that our plans for .Doctor are extremely thorough and in line with the GAC's expectations.

7. In case of doubt with regard to the authenticity of licenses or credentials, registry operators should consult with relevant national supervisory authorities or their equivalents.

Response: We acknowledge the GAC's concerns above and submit that we will contractually require our 3rd party verification agency to clear any doubts with respect to authenticity of licenses or credentials by methods that include consulting with the relevant national supervisory authority or their equivalents.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Response: We acknowledge the GAC's concern with respect to ensuring that registrants' continue to comply with appropriate regulations and licensing requirements. We submit that we are willing to carry out the periodic post-registration checks such as those suggested by the GAC with the aim of ensuring that registrants continue to comply with our Eligibility Restrictions and other security policies.

That being said, we look forward to ICANN Board providing additional guidance about the details of such checks as per ICANN's requirements.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 14 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotHost Inc.
Application ID	1-1061-73671
Applied for TLD (string)	Host

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	DotPress Inc.
Application ID	1-1062-36956
Applied for TLD (string)	Press

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dotfresh Inc.
Application ID	1-1063-32835
Applied for TLD (string)	Insurance

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

GAC Advice Response Form for Applicants

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

Additional Safeguards for Category 1 strings associated with certain market sectors

We also agree with the GAC that certain strings are associated with market sectors which have clear and / or regulated entry requirements in multiple jurisdictions, and that additional safeguards should apply to this sub-set of strings. We submit that this TLD, .Insurance is indeed a part of the sub-set of strings that require further targeted safeguards to address specific risks, and to bring registry policy in line with arrangements in place offline. We would urge the GAC and the ICANN board to review our application in its entirety to assess the strength and details of security measures and policies we have put in place in order to ensure that the registry policy is in line with arrangements in place offline.

That being said, we have addressed each of the safeguards recommended by the GAC as follows.

6. At the time of registration, the registry operator must verify and validate the registrants' authorizations, charters, licenses and / or other related credentials for participation in that sector.

Response: We acknowledge the GAC's concerns and submit that this safeguard is acceptable to us. As detailed in our application, verification and validation of the registrants' credentials will be a key function which will be performed by an external 3rd party agency. A quote from such a 3rd party service provider was also provided as part of our application, on the basis of which our business plans have been made. The selected 3rd party agency will be contractually required by us to verify and validate the potential registrants' licenses and credentials, in addition to a list of

GAC Advice Response Form for Applicants

other verifications such as domain validation, compliance with our Eligibility Restrictions and Name Selection Policy, and the individual registrants' authority to register the domain name.

We believe that a review of our application will serve to show that our plans for .Insurance are extremely thorough and in line with the GAC's expectations.

7. In case of doubt with regard to the authenticity of licenses or credentials, registry operators should consult with relevant national supervisory authorities or their equivalents.

Response: We acknowledge the GAC's concerns above and submit that we will contractually require our 3rd party verification agency to clear any doubts with respect to authenticity of licenses or credentials by methods that include consulting with the relevant national supervisory authority or their equivalents.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Response: We acknowledge the GAC's concern with respect to ensuring that registrants' continue to comply with appropriate regulations and licensing requirements. We submit that we are willing to carry out the periodic post-registration checks such as those suggested by the GAC with the aim of ensuring that registrants continue to comply with our Eligibility Restrictions and other security policies.

That being said, we look forward to ICANN Board providing additional guidance about the details of such checks as per ICANN's requirements.

GAC Advice Section titled Restricted Registration Policies Part 2: Exclusive Access

Response: We acknowledge and agree with the GAC's position that this string represents a generic term. As stated in our application, we do not intend to restrict access in this TLD exclusively to the Registry Operator.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 14 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	IM TLD Inc.
Application ID	1-1064-17982
Applied for TLD (string)	Chat

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	Dotserve Inc.
Application ID	1-1065-49761
Applied for TLD (string)	Loans

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC’s accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website.”

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

Additional Safeguards for Category 1 strings associated with certain market sectors

We also agree with the GAC that certain strings are associated with market sectors which have clear and / or regulated entry requirements in multiple jurisdictions, and that additional safeguards should apply to this sub-set of strings. We submit that this TLD, .Loans is indeed a part of the sub-set of strings that require further targeted safeguards to address specific risks, and to bring registry policy in line with arrangements in place offline. We would urge the GAC and the ICANN board to review our application in its entirety to assess the strength and details of security measures and policies we have put in place in order to ensure that the registry policy is in line with arrangements in place offline.

That being said, we have addressed each of the safeguards recommended by the GAC as follows.

6. At the time of registration, the registry operator must verify and validate the registrants’ authorizations, charters, licenses and / or other related credentials for participation in that sector.

Response: We acknowledge the GAC’s concerns and submit that this safeguard is acceptable to us. As detailed in our application, verification and validation of the registrants’ credentials will be a key function which will be performed by an external 3rd party agency. A quote from such a 3rd party service provider was also provided as part of our application, on the basis of which our business plans have been made. The selected 3rd party agency will be contractually required by us to verify and validate the potential registrants’ licenses and credentials, in addition to a list of

GAC Advice Response Form for Applicants

other verifications such as domain validation, compliance with our Eligibility Restrictions and Name Selection Policy, and the individual registrants' authority to register the domain name.

We believe that a review of our application will serve to show that our plans for .Loans are extremely thorough and in line with the GAC's expectations.

7. In case of doubt with regard to the authenticity of licenses or credentials, registry operators should consult with relevant national supervisory authorities or their equivalents.

Response: We acknowledge the GAC's concerns above and submit that we will contractually require our 3rd party verification agency to clear any doubts with respect to authenticity of licenses or credentials by methods that include consulting with the relevant national supervisory authority or their equivalents.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

Response: We acknowledge the GAC's concern with respect to ensuring that registrants' continue to comply with appropriate regulations and licensing requirements. We submit that we are willing to carry out the periodic post-registration checks such as those suggested by the GAC with the aim of ensuring that registrants continue to comply with our Eligibility Restrictions and other security policies.

That being said, we look forward to ICANN Board providing additional guidance about the details of such checks as per ICANN's requirements.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 14 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotCity Inc.
Application ID	1-1066-67099
Applied for TLD (string)	City

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

GAC Advice Response Form for Applicants

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC’s accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website.”

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Entertainment TLD Inc.
Application ID	1-1067-89443
Applied for TLD (string)	Play

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. We also acknowledge the fact that this string is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

GAC Advice Response Form for Applicants

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

"SINGLE POINT OF CONTACT

GAC Advice Response Form for Applicants

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC's accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website."

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotClick Inc.
Application ID	1-1068-4952
Applied for TLD (string)	Click

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotPing Inc.
Application ID	1-1069-35959
Applied for TLD (string)	Ping

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	DotOnline Inc.
Application ID	1-1070-97873
Applied for TLD (string)	Online

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names. Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

- ** Whois accuracy provisions
- ** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

Category 1 strings

We understand the GAC’s apprehension around the delegation of sensitive strings that are related to consumer protection, and regulated markets. However, we believe that .Online is a purely generic TLD, and should ideally not be considered as part of the GAC’s list of strings related to Intellectual Property.

We do acknowledge the GAC’s opinion that .Online is sensitive in nature, and we have made significant efforts to prepare our application accordingly. As we have provided our response on each safeguard recommended by GAC above, we will continue to do the same with the additional measures suggested by the GAC for the Category 1 strings.

1. Registry operators will include in its acceptable use policy that registrants comply with all acceptable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial discourses.

Response: We submit that we will include the above provisions in our acceptable use policy.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement

Response: We acknowledge the GAC's recommendation, and submit that we will look to cover this issue by including language in our RRA that will require the registrant to accept our acceptable content and use policy as part of the Registrar Registrant Agreement.

In addition to this, we will comply with any specific method of notifying registrants that ICANN mandates.

3. Registry operator will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We submit that we will include this provision in our acceptable content and use policy, which will be part of the Registrar Registrant Agreement. As an added layer of security we will include a clause that any violations of the above provision will be treated as a case of abuse and will be dealt with according to the procedure described in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal activities.

Response: We acknowledge the GAC's concerns with respect to the possibility of risks stemming from fraudulent and other illegal activities. We submit that we have taken a multitude of steps to minimize any foreseeable threats in this TLD, and those have been detailed in our application. While our research shows that there is no single regulatory body associated with this particular string, we are extremely open to establishing relationships with any relevant authority / authorities that ICANN prescribes for this string.

In case the mechanisms detailed in our application for countering risks of fraudulent and illegal activities are considered insufficient, we would be more than willing to discuss and implement additional measures as required by ICANN.

5. Registrants must be required by the registry operator to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business.

Response: We acknowledge the GAC's recommendation above, and would like to draw the GAC's attention to our answer to Question 28, sub-section 4.1.1:

GAC Advice Response Form for Applicants

“SINGLE POINT OF CONTACT

In accordance with section 4.1 of specification 6 of the Registry Agreement we will establish a single abuse point of contact (SAPOC) responsible for addressing and providing a timely response to abuse complaints concerning all names registered in the TLD through all registrars of record, including those involving a reseller. Complaints may be received from members of the general public, other registries, registrars, LEA (Law Enforcement Agencies), government and quasi governmental agencies and recognised members of the anti-abuse community.

The SAPOC’s accurate contact details (email, fax and mailing address) will be provided to ICANN and published on the abuse page of our Registry website.”

We believe that the above provision should suffice to allay the first part of this concern voiced by the GAC.

With respect to providing the contact details of the relevant regulatory or industry self-regulatory bodies in their main place of business, we submit that we agree to provide these contact details where ever applicable, and as required by ICANN. Over and above these, we are prepared to discuss any additional measures to handle complaints or reports of abuse that ICANN deems fit.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 11 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotWorld Inc.
Application ID	1-1071-58353
Applied for TLD (string)	World

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotSpace Inc.
Application ID	1-1072-65736
Applied for TLD (string)	Space

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Respondent:

Applicant Name	DotAbout Inc.
Application ID	1-1073-19391
Applied for TLD (string)	One

Response:

We would like to thank the GAC as well as ICANN for offering us the opportunity to provide our response to GAC’s Communiqué dated 11th April 2013. We respect the GAC’s concerns and welcome this chance to address each of the proposed safeguards individually. We also submit that we will comply with all safeguards as required by ICANN.

The GAC has advised the ICANN Board that the following six safeguards should apply to all new gTLDs and be subject to contractual oversight.

1. WHOIS verification and checks – Registry Operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS Data at least twice a year. Registry Operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry Operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We acknowledge the GAC’s concerns over WHOIS verification and checks, and would like draw the GAC’s attention to our application answer to Question 28 (Abuse Prevention and Mitigation) sub-section 5.2:

“Regular Monitoring and Sampling: Registrants of randomly selected domain names will be contacted by telephone using the provided Whois information by a member of our team in order to verify the phone number and confirm other Whois information. Where the registrant is not contactable by telephone, alternative contact details (email, postal address) will be used to contact the registrant who must then provide a contact number that is verified by our team. In the event that the registrant is not able to be contacted by any of the methods provided in

GAC Advice Response Form for Applicants

Whois, the domain name will be cancelled following five contact attempts or one month after the initial contact attempt (based on the premise that a failure to respond is indicative of inaccurate Whois information and is grounds for terminating the registration agreement).”

In addition, the currently proposed Registrar Accreditation Agreement Section 3.7.8 also requires all registrars to comply with a very thorough Whois Accuracy Program Specification (<http://www.icann.org/en/resources/registrars/raa/proposed-whois-accuracy-22apr13-en.pdf>) which also includes validation and verification of Whois data.

Consequent to both of the above, we believe that the GAC’s objectives with respect to Whois verification and checks will be met at the Registry and Registrar levels. However, if ICANN requires any additional specific measures to be taken at the Registry level, we would be happy to discuss and implement a feasible solution.

2. Mitigating abusive activity: Registry operators will ensure that the terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge and agree with the GAC’s concerns with respect to illegal usage of domain names.

Our application provides details of our Acceptable Content and Usage Policy that includes protection of Intellectual Property, Trademark, Copyrights and Patents, and prohibits spamming, phishing, pharming and DNS hijacking, distribution of viruses or malware, child pornography, using fast flux techniques, running botnet command and control operations, hacking, financial and other confidence scams, illegal pharmaceutical distribution. We also draw the GAC’s attention to our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 4.7:

“Contractual Provisions: Below are some additional points that we will look to cover in the Registry Registrar Agreement (RRA). These clauses will enable us to enforce some additional, proactive measures to curb and deter abuse:

Relevant language that requires Registrars to provide for the following in their agreement with the Registrants

** Whois accuracy provisions

** Acceptable content and usage policy”

As evidenced by our application, we intend to require registrars (through the RRA) to contractually require registrants to accept our Acceptable content and usage policy which covers all of the concerns cited by the GAC under this proposed safeguard.

3. Security Checks: While respecting privacy and confidentiality, Registry Operators will periodically conduct a technical analysis to assess whether domain names in its gTLD are being used to perpetrate security threats, such as phishing, pharming, malware, and botnets. If the Registry Operator identifies security risks that pose an actual risk of harm, Registry Operator will

GAC Advice Response Form for Applicants

notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We acknowledge the GAC's concerns and submit that we are willing to conduct such a technical analysis, and also take the remedial action suggested by the GAC. This was and remains our intention behind prohibiting such usage as part of our Acceptable content and usage policy. Any violation of the same will be treated as a case of abuse, as detailed in our answer to Question 28 (Abuse Prevention and Mitigation) sub-section 2.2: Acceptable Usage Related Violations.

That being said, we would look forward to ICANN providing additional clarity on the details of this technical analysis such as frequency, etc.

4. Documentation: Registry operators will maintain statistical reports that provide the number of inaccurate Whois records or security threats identified and actions taken as a result of its periodic Whois and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We acknowledge the GAC's concerns, and submit that we are willing to maintain all such statistical reports as required by ICANN.

Once again, we look forward to ICANN providing additional clarity on the requirements of these statistical reports, such as level of detail, format, etc.

5. Making and Handling Complaints: Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the Whois information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We acknowledge the GAC's concerns above, and submit that we have detailed such mechanisms in our application. We draw the GAC's attention to our answer to Question 28 sub-section 4.1 wherein we have provided details of the mechanisms that users, security agencies, and law enforcement bodies can use in order to make complaints about inaccurate Whois information and any of the abovementioned activities. Sub-sections 4.2 through 4.5 details how these complaints will be evaluated, categorized and mitigated subject to strict Service Level Agreements.

Having said that, we are more than willing to discuss and implement any specific additional mechanisms for making and handling complaints as required by ICANN.

6. Consequences: Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false Whois information and violations of the requirement that the domain name

GAC Advice Response Form for Applicants

should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We acknowledge and agree with the concern voiced by the GAC. We submit that we have made this provision in our answer to Question 28 sub-section 4.7: Contractual Provisions. Quoting from our application:

“As the registry operator, we will use the Registry-Registrar Agreement (RRA) to establish the registry’s right to act against abusive registrations...

...In general, the contracts will establish that the registry operator may reject a registration request, or can delete, revoke, update, suspend, cancel, or transfer a registration for violations of our anti-abuse policies. The terms in our proposed agreement will empower us to take necessary action including, but not limited to:

* Discretionary action against domain names that are not accompanied by complete and accurate information as required by ICANN Requirements and/or Registry Policies or where required information is not updated and/or corrected as required by ICANN Requirements and/or Registry Policies;

* Action as may be required to comply with any applicable law, regulation, holding, order, or decision issued by a court, administrative authority, or dispute resolution service provider with jurisdiction over the Registry;”

Having said that, we would be happy to discuss and implement any specific additional consequences that are required by ICANN.

We would also like to use this opportunity to state that we are more than willing to work with the GAC and ICANN to address any specific or broad areas of concern in addition to the 6 areas mentioned above. Furthermore, we are willing to be contractually bound by any provisions that ICANN requires. Once again, we would like to thank the GAC for putting together this Advice, as well as ICANN for providing us with the opportunity to clarify our stance on the individual matters. We hope that our responses have been satisfactory, and would welcome any follow-up questions or specific safeguards that the GAC may propose for us.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Deutsche Post AG
Application ID	1-1075-2496
Applied for TLD (string)	EPOST

Response:

Dear ICANN Board,

We refer to the Governmental Advisory Committee’s (GAC) Communiqué published on April 11, 2013, and in particular Annex I thereof.

Please note that we are in full agreement with the points raised by the GAC in relation to registries of future generic top-level domains implementing the six safeguards referred to in the above mentioned Annex I, being:

1. WHOIS verification and checks: considering the fact that the registry for the applied-for gTLD will – at least initially – operate a single registrant-top-level domain, we will ensure at all times the accuracy of publicly available WHOIS information. If and when our domain name registration policy would change, we will implement processes and procedures in order to provide for checking mechanisms in line with what is proposed by the GAC;
2. Mitigating abusive activity: considering the fact that the proposed registry will – at least initially – be a single registrant-TLD, where any and all services provided under domain names in the TLD will be under the control of the registry, the risks of abusive activity should be non-existing. If and when our domain name policy would change, we will implement the safeguards requested by the GAC and implement processes in order to (i) mitigate abusive conduct from happening, and (ii) promptly implementing appropriate safeguards in the event abusive activity would be detected;
3. Security checks: we will implement policies, processes and procedures in order to avoid the security threats referred to in Annex I to the GAC Communiqué, in particular in relation to phishing, pharming, malware and botnets, and will conduct regular security checks in relation to domain names registered by or on behalf of the registry, as well as by third parties in the event

GAC Advice Response Form for Applicants

we will allow non-affiliated parties of the applicant to register domain names and/or render services under such domain names. Nonetheless, proactively carrying out these types of security checks is most likely something that will require further technical specification to be defined by ICANN in accordance with its policy development processes;

4. Documentation: we will comply in full with the proposed documentation requirements put forward by the GAC in relation to maintaining reports concerning (i) the number of inaccurate WHOIS records, (ii) security threats identified, and (iii) actions taken. These reports will be kept for the full term of the registry agreement with ICANN;

5. Making and handling complaints: as stated in our application, we will put in place a complaints point of contact that will deal with complaints relating to malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or any type of behaviour that is considered to be contrary to applicable law.

6. Consequences: we will ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law, which will be laid down in the domain name registrations that will be published following the delegation of the TLD to us.

Furthermore, we refer to our responses to Questions 18, 20, 28 and 29, as amended following the responses to the clarifying questions we have submitted and/or will supplement if needed be. However, we reserve the right to amend our responses following the outcome of the current policy development and comments processes in relation to the GAC Advice contained in the GAC Communiqué referred to above.

Respectfully submitted,
Deutsche Post AG

Respondent:

Applicant Name	Your Dot PhD, Inc.
Application ID	1-1076-76766
Applied for TLD (string)	.MBA

Response:

Your Dot Phd, Inc. (Applicant) has applied to operate the new top level domain (TLD) .MBA. The information below is in response to the Governmental Advisory Committee (GAC) Communiqué dated April 11, 2013, which identifies the string .MBA as a Category 1 TLD.

This Applicant has reviewed the GAC’s suggested safeguards for strings which are deemed Category 1 TLDs and believes that its application addresses items 1, 2, 3 and 5 and is willing to include these items in its Registry Agreement with ICANN to operate the .MBA TLD.

With respect to Item 4, this Applicant has developed an extensive strategy to mitigate fraud and is willing to include specifics of its strategy in its Registry Agreement with ICANN but this Applicant is not aware of a “relevant regulatory or industry self-regulatory body” that oversees all Master of Business Administration (“MBA”) degrees. In an attempt to maintain the implied trust from consumers relating to the term MBA, this Applicant has adopted the Integrated Postsecondary Education Data System definition of the term MBA and the international equivalent as defined by the International Standard of Classification of Education. This is same definition adopted by the United States Census Bureau, the National Center for Education and the Organization for Economic Co-operation and Development and is an objective definition that is easily accessible online for all potential registrants to view. This definition is the basis of this Applicant’s registration requirements and the core of its strategy to protect the integrity of the .MBA TLD and the trust and expectations of Internet users that visit a .MBA website. This Applicant is available to discuss the specifics of its extensive strategy to mitigate fraud with the GAC and is open to considering suggestions to improve its strategy.

GAC Advice Response Form for Applicants

Respondent:

Applicant Name	AUDI Aktiengesellschaft
Application ID	1-1079-59916
Applied for TLD (string)	AUDI

Response:

AUDI Aktiengesellschaft, the applicant for the .AUDI top-level domain, welcomes and supports the GAC Advice as published on April 11, 2013, since the requested safeguards from GAC have always been fundamental principles for the AUDI Aktiengesellschaft and have therefore been incorporated in the application accordingly. The GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

AUDI Aktiengesellschaft welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** General principles of operations for .AUDI by AUDI Aktiengesellschaft

AUDI Aktiengesellschaft would like to state, that:

1. We will respect human rights and fundamental freedoms

GAC Advice Response Form for Applicants

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by AUDI Aktiengesellschaft for .AUDI based on General Safeguards

AUDI Aktiengesellschaft will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - AUDI Aktiengesellschaft will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. AUDI Aktiengesellschaft will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.

2. Mitigating abusive activity - AUDI Aktiengesellschaft will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, AUDI Aktiengesellschaft will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If AUDI Aktiengesellschaft identifies security risks that pose an actual risk of harm, AUDI Aktiengesellschaft will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - AUDI Aktiengesellschaft will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. AUDI Aktiengesellschaft will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.
5. Making and Handling Complaints - AUDI Aktiengesellschaft will ensure that there is a mechanism for making complaints to AUDI Aktiengesellschaft that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
6. Consequences - Consistent with applicable law and any related procedures, AUDI Aktiengesellschaft shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

AUDI Aktiengesellschaft would like to note that registration policies will be setup according to this request.

AUDI Aktiengesellschaft would like to note that .AUDI is not a generic term and therefore the GAC Advice on exclusive access of generic terms does not apply. Furthermore AUDI Aktiengesellschaft would like to state that the .AUDI is not in the public interest, but a representation of Intellectual property rights of AUDI Aktiengesellschaft.

However AUDI Aktiengesellschaft reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	European Broadcasting Union (EBU)
Application ID	1-1083-39123
Applied for TLD (string)	RADIO

Response:

The European Broadcasting Union (EBU) as applicant for the .radio TLDs application with the support of the whole world Radio Community welcomes the GAC Advice, and wants to make the following statements with regard to the principles contained in the GAC Communiqué:

A) Community Applications

As exclusive and only applicant of .radio TLD on behalf of the Radio Community EBU would like expressing its support to GAC's position, stated in its Beijing Communiqué, Point IV.e with regard to:

that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.

The "collective and clear opinion" for the necessity of a community based TLD .radio has been expressed through the letters of support attached to Q20(f)

All member Unions of the World Broadcasting Unions have written letters of endorsement for the EBU application as follows:

ABU (Asia-Pacific Broadcasting Union), representing national broadcasters of Asia and Oceania reaching audiences of 3 billion users, (60 countries).

AUB-UAR (African Union of Broadcasters), representing national broadcasters of Africa, (50 countries).

GAC Advice Response Form for Applicants

NABA (North American Broadcasting Association), representing the national broadcasters of United States, Mexico and Canada.

OTI (Organización de Televisión IberoAmericana), representing national broadcasters of Latin America and the Iberian peninsula, (60 countries).

CBU (Caribbean Broadcasting Union) representing national broadcasters of the Caribbean, (29 countries)..

AIR-IAB, (Asociación Internacional de Radiodifusión) representing commercial broadcasters from 16 South American countries plus a number of other radio associations on other continents.

ASBU (Arab States Broadcasting Union) representing broadcasters of the 23 Arab League member countries.

The EBU has also garnered support from other broadcasters' associations covering continental regions or specialized channels:

AIB - Association for International Broadcasting, grouping international broadcasters world-wide.

AER - Association of European Radios: commercial radio broadcasters of Western Europe.

AMARC - Association Mondiale des Radiodiffuseurs Communautaires: all community radios in 115 countries around the world.

EGTA - European Association of Television and Radio Sales Houses, the regional association that gathers all vendors of Radio and TV advertising around Europe.

URTI - Union Radiophonique et Télévisuelle Internationale, a UNESCO non-profit recognized association that promotes and organizes the exchange of radio and TV programmes free-of-charge between broadcasters from the North and the South of the world.

IMDA - Internet Media Device Alliance, bringing together a number of world radio stakeholders specialized in interactive services and related equipment.

Finally, and to bear witness to the special character of this application for a community based TLD, the EBU has asked one very important partner in the radio world - the Metropolitan Opera of New York - to endorse the request. The Met endorsement demonstrates that a community-based .radio TLD is not only of interest for broadcasters, but also for all those who cooperate with this community to promote cultural diversity and excellence.

In addition to formal endorsement letters, our application has the backing from IARU (International Amateur Radio Union) which expressed its support on the public forum (Comment ID:o7ocwnxe). IARU represents more than three million licensees in more than 160 countries.

B) Safeguards for the .radio TLD

EBU concurs with the GAC when it states that:

- Strings that are linked to regulated or professional sectors should operate in a way that is consistent with applicable laws. These strings are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm. The following safeguards should apply to strings that are related to these sectors: [...]

In fact all radios of the real world are entitled to make their activity on the basis of licences or authorizations released by national, international and /or local authorities. This regime of authorization is in place to guarantee the exclusivity of each licence for radio and to protect listeners, through a series of national or international obligations for radio broadcasters or radio-amateurs.

This is precisely why our application contains all the necessary safeguards to guarantee that registrants in the .radio TLD not only comply with applicable laws, but that the namespace enables the highest level of consumer trust and to preserve the special and exclusive relation that links each radio licence to its listeners, its territory, to its applicable regulations.

These concerns, and these safeguards will be carried to .radio TLD Policies, Agreements and Dispute Resolution Procedures.

B.1 Registration policies

Registration in radio will be available only to:

- a) community membership defined as bona fide membership in the any of the eligible categories, as defined in 20 (b) above, and
- (b) the additional requirements that the registrant's actions in the Radio community, as well as the registrant's use of the registered domain name, must be:
 - (i) generally accepted as legitimate; and
 - (ii) beneficial to the cause and the values of the radio industry; and
 - (iii) commensurate with the role and importance of the registered domain name; and
 - (iv) in good faith at the time of registration and thereafter.

B.2 Enforcement Mechanisms

We would like to raise the attention more specifically to the enforcement mechanisms devised by EBU to maintain the quality of the .radio TLD namesake and its compliance with the rules, and mitigate possible abuses.

In this regard, we should list:

1. Rapid Takedown Policy for cases of general malicious conduct (Q28.1)
2. Rapid Takedown Policy for cases of phishing, with significantly shortened response times (Q28.2)
3. Single Point of Contact for Abusive behaviour on the Registry's side (Q28.3)
4. AdminContact as Single Point of Contact for Registrants' on abusive or non-compliant behaviour (Q20.e.1)
5. Ex Officio Random Checks of the usage of registered Domain Names (Q29.2.1)
6. Complaints System (Q29.2.2)

All these mechanisms are in addition of the validation procedures established at registration time. We firmly believe that in conjunction with our registration policies and ICANN-mandated policies EBU adequately addresses all the safeguards outlined by GAC both for those applicable to all new gTLDs as well as the additional safeguards advised for certain categories of new gTLDs.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Patagonia, Inc.
Application ID	1-1084-78254
Applied for TLD (string)	.patagonia

Response:

Response of Patagonia, Inc. to Governmental Advisory Committee Advice to ICANN Board of Directors Regarding .patagonia gTLD Application

The Governmental Advisory Committee (“GAC”) did not identify in its GAC Advice to the ICANN Board of Directors (“Board”) why it contends that further GAC consideration may be warranted for the .patagonia gTLD application filed by Patagonia, Inc. (“Patagonia”). Based on the Early Warnings filed by both the Argentine Republic and the Republic of Chile in which both governments state that “patagonia” is a name of a region within their countries and identify withdrawal of the .patagonia application as the only acceptable remedial measure, Patagonia believes that GAC representatives of both countries sought GAC Advice rejecting the .patagonia application on the ground that it is a “geographic name.”

Patagonia respectfully requests that the Board allow Patagonia’s .patagonia application to proceed now beyond Initial Evaluation.

First, the “Geographic Names” terms and provisions of the Applicant Guidebook require it. Patagonia has reasonably relied upon the process set forth in Applicant Guidebook, has expended significant effort and resources in reliance on those terms and provisions, and is in full compliance with the rules contained therein. In particular, Patagonia went to great lengths before deciding to proceed with its .patagonia application to ensure that the .patagonia gTLD string is not a “Geographic Name” as ICANN has defined that term.

Second, preventing Patagonia’s .patagonia application from proceeding now beyond Initial Evaluation contradicts and renders moot key principles of certainty and clarity for applicants and a predictable evaluation process that were adopted by the GNSO, the Board, and the GAC. Changing now the crucial, outcome-determinative provisions of the Applicant Guidebook such

GAC Advice Response Form for Applicants

as the definition of Geographic Names constitutes a material and arbitrary change to the Applicant Guidebook, made without proper notice to Patagonia.

Third, allowing Patagonia's .patagonia application to proceed now avoids the conflict arising from a potential scenario in which future GAC Advice calls for adverse action against the .patagonia application on the same basis as an ICANN-funded, government-filed Community Objection found to be without merit by the ICANN-selected Dispute Resolution Provider.

Fourth, no objective legal standard prevents or prohibits Patagonia from applying for or operating a .patagonia gTLD. Neither the laws of the Argentine Republic nor the laws of the Republic of Chile, the two countries that filed Early Warnings against Patagonia's .patagonia application and that presumably sought GAC Advice on it, prohibit or limit use of the name "Patagonia." To the contrary, the laws of both countries have affirmatively protected Patagonia's PATAGONIA Trademarks for over two decades. Moreover, Patagonia's ownership of hundreds of registrations globally for its PATAGONIA Trademarks makes clear that the laws of scores of GAC member countries also affirmatively protect Patagonia's PATAGONIA Trademarks.

Finally, Patagonia filed its .patagonia application and continues to act in good faith consistent both with its reputation as an outstanding corporate citizen and its mission statement, which is "Build the best product, cause no unnecessary harm, use business to inspire and implement solutions to the environmental crisis." Patagonia intends to use the .patagonia gTLD as a ".brand gTLD" for a beneficial purpose, and has made every effort to engage collaboratively with the Argentine Republic and the Republic of Chile over their concerns about the .patagonia application.

If the ICANN Board decides that Patagonia's .patagonia application should not proceed now beyond Initial Evaluation, Patagonia respectfully requests that the Board communicate to the GAC that the Board must receive the GAC's final and definitive advice relating to Patagonia's .patagonia application on or before the conclusion of the ICANN meeting in Durban, South Africa on July 18, 2013. It is indisputable that Patagonia will be materially and irreversibly prejudiced if the issue of whether Patagonia's .patagonia application may proceed is considered during the ICANN meeting in Buenos Aires, Argentina.

I. "Patagonia" is not a "Geographic Name" as defined by ICANN.

"Patagonia" is not a country or territory name, and is thus not prohibited as a gTLD string. Section 2.2.1.4.1 of the Applicant Guidebook sets forth seven criteria for identifying the country or territory names that are "not available under the New gTLD Program in this application round." None of these criteria applies to "Patagonia."

"Patagonia" is not a Geographic Name that required documentation of support or non-objection from any government or public authority. Section 2.2.1.4.2 of the Applicant Guidebook identifies five specific categories of gTLD strings that are considered geographic names and require such documentation. These categories are: (1) capital city names; (2) city names where applicants declare that they intend to use the gTLD for purposes associated with the city name; (3) sub-national place names listed in the ISO 3166-2 standard; (4) regional names appearing on the list of UNESCO regions; and (5) regional names on the UN's "Composition of macro geographical (continental) regions, geographical sub-regions, and selected economic and other

groupings” list. The name “Patagonia” does not fall within any of these categories and does not appear on any of the above lists.

The Geographic Names Panel, which has reportedly completed its review of all gTLD applications, has not contacted Patagonia regarding its .patagonia application.

Patagonia’s .patagonia application is in full compliance with the requirements on Geographic Names set forth in Section 2.2.1.4 of the Applicant Guidebook, and with all other Guidebook requirements. Prohibiting Patagonia’s .patagonia application from proceeding beyond Initial Evaluation based on the GAC Advice renders these clear rules moot.

II. The Board Must Honor Principles of Certainty, Clarity, and Predictability Adopted by the Board and GAC, as well as the GAC’s Own Position on the Definition of Geographic Names.

The evaluation and selection procedure for new gTLD registries should respect the principles of fairness, transparency, and non-discrimination. All applicants for a new gTLD registry should therefore be evaluated against transparent and predictable criteria, fully available to the applicants prior to the initiation of the process. GNSO Policy Recommendation 1.

The GAC adopted this GNSO policy recommendation on the introduction of new gTLDs as one of the GAC’s general public policy principles in its March 28, 2007 GAC Principles Regarding New gTLDs. The Board adopted this GNSO policy recommendation on the introduction of new gTLDs in June 2008. Board Resolution 2008.06.26.02.

The Board incorporated this policy recommendation into its subsequent statements on the issue of geographic names. For example, in its “ICANN Board Rationale on Geographic Names Associated with the gTLD Program,” the Board found “the balance of retaining certainty for applicants and demonstrating flexibility in finding solutions” and the “goals of providing greater clarity of applicants and appropriate safeguards for governments and the broad community” to be “significant factors” in the Board’s rationale for implementing the new gTLD program containing the adopted measures on geographic names as now set forth in the Applicant Guidebook. Similarly, the Board identified as one of its reasons for the proposed approach to geographic names as now set forth in the Applicant Guidebook the “inten[tion] to create a predictable, repeatable process for the evaluation of gTLD applications. Thus, to the extent possible, geographic names are defined with respect to pre-existing lists.” These pre-existing lists are the same lists referenced in Section 2.2.1.4 of the Applicant Guidebook, the same lists on which “Patagonia” does not appear.

In its May 26, 2011 “GAC Comments on the Applicant Guidebook,” the GAC “accept[ed] ICANN’s interpretation with regard to the definition of geographic names.” This “definition of geographic names” is Section 2.2.1.4 of the Applicant Guidebook – the same section under which Patagonia is not considered a “Geographic Name.”

Moreover, the GAC itself voluntarily recognized that the “definition of geographic names” could implicate brands and, in that event, the relevant government had the responsibility to identify safeguards:

GAC recalls that in cases in which geographic names correspond with generic names or brands, such a regulation would not exclude per se the use of generic names and brands as Top-Level Domains. It would, however, be in the area of responsibility of the adequate government to define requirements and safeguards to prevent the use of those Top-Level Domains as geoTLDs.

GAC Cartagena Communiqué - scorecard to serve as the basis of the GAC approach to Brussels ICANN Board/GAC consultation meeting 28 February-1 March 2011, accessible at <http://archive.icann.org/en/topics/new-gtlds/gac-scorecard-23feb11-en.pdf>.

Under the GAC's position, which it never repudiated or reversed, even if "Patagonia" met the definition of a geographic name (which it does not), the applicable remedial measure is not the rejection of the .patagonia application, is not the insistence that Patagonia withdraw its .patagonia application, and is not GAC Advice that the .patagonia application not proceed to Initial Evaluation. To the contrary, the applicable remedial measure is the delineation by the Argentine Republic and the Republic of Chile of requirements and safeguards to prevent the use of .patagonia as a geoTLD. Yet, as discussed below, neither government has made any meaningful effort to engage collaboratively with Patagonia.

The Board must honor the principles of certainty, clarity, and predictability adopted by the Board itself and incorporated into the Board's rationale on geographic names. Similarly, the Board should also honor the same principles as adopted by the GAC, as well as the GAC's own position on the definition of Geographic Names. The Board should do so by allowing Patagonia's .patagonia application to proceed now beyond Initial Evaluation, and not wait until after the Durban meeting. To do otherwise renders those principles and position moot and effectively constitutes a material and arbitrary change to the Applicant Guidebook, made without proper notice to Patagonia and more than one year after the .patagonia application was submitted.

III. Avoid A Conflict Between Dispute Resolution Proceeding Outcomes and GAC Advice

The Ministry of Foreign Affairs of Argentina has filed a Community Objection against the .patagonia application. Patagonia expects to prevail on the merits. Accordingly, if the Board accepts GAC Advice, the Board may face a situation in which both Patagonia has defeated an ICANN-funded, government-filed Community Objection and subsequent GAC Advice calls for adverse action against the .patagonia application on the same basis found to be without merit by the ICANN-selected Dispute Resolution Provider. Allowing the .patagonia application to proceed now beyond Initial Evaluation avoids such a conflict and honors the dispute resolution process established by the Board.

IV. No Law of the Argentine Republic or the Republic of Chile Prohibits Patagonia's .patagonia Application.

No laws in the Argentine Republic or the Republic of Chile, the two countries that filed Early Warnings against Patagonia's .patagonia application and that presumably sought GAC advice on it, prohibit Patagonia's .patagonia application. Neither country's law contains any special protections for the use of the name "Patagonia," or any limitations or prohibitions on use of that name. Neither country's law prohibits Patagonia, Inc., or any other entity, from applying for or operating a .patagonia gTLD. And there are no restrictions on registration of domain names

GAC Advice Response Form for Applicants

containing or consisting of “patagonia” in the .ar and .cl ccTLDs. See Exhibit A, Declaration of Gustavo P. Giay at ¶¶ 6-7; Exhibit B, Declaration of Bernardo Serrano at ¶¶ 6-7.

To the contrary, the laws of both countries affirmatively protect Patagonia’s trademarks that contain or consist of PATAGONIA (the “PATAGONIA Trademarks”). Patagonia owns 11 registrations for PATAGONIA Trademarks in the Argentine Republic, the first of which issued more than 20 years ago. See Exhibit A, Declaration of Gustavo P. Giay at ¶ 4. Patagonia also owns 5 registrations for PATAGONIA Trademarks in the Republic of Chile, the first of which issued more than 29 years ago. See Exhibit B, Declaration of Bernardo Serrano at ¶ 4. Patagonia has relied on these registrations to secure and enforce rights in its PATAGONIA Trademarks against third parties in both countries.

Moreover, Patagonia owns hundreds of registrations globally for its PATAGONIA Trademarks, including 225 registrations in 61 GAC member countries and entities. This number increases to 306 registrations in 68 GAC member countries and entities if Patagonia’s Benelux registrations are counted separately for Belgium, Luxembourg, and Netherlands; and its Community Trade Mark (EU) registrations are counted separately for each EU member country that is also a GAC member. See Exhibit C. Patagonia’s ownership of these PATAGONIA Trademarks registrations makes clear that the laws of more than half the GAC-member countries also affirmatively protect Patagonia’s PATAGONIA Trademarks.

Neither the Joint Ministerial Statement signed by representatives of the Argentine Republic and the Republic of Chile on November 8, 2012 nor the April 5, 2013 Montevideo Declaration constitutes a prohibition on Patagonia’s .patagonia application. Neither has force of law in the Argentine Republic or the Republic of Chile. In the Argentine Republic, neither can be the basis of an enforcement action, and neither can be enforced privately or by the government. Similarly, in the Republic of Chile, neither can be the basis for a private or government enforcement action. Thus, neither prohibits or limits the use of the name “Patagonia,” generally or specifically as a gTLD. See Exhibit A, Declaration of Gustavo P. Giay at ¶ 9; Exhibit B, Declaration of Bernardo Serrano at ¶ 9.

Finally, even if the Joint Ministerial Statement or the Montevideo Declaration had the force of law, they would be inapplicable to Patagonia’s .patagonia application. Both occurred long after Patagonia had submitted its .patagonia application to ICANN. Similarly, any new law in either country that attempted to limit use of the name “Patagonia” would also be inapplicable. Patagonia’s .patagonia application is in full compliance with applicable law – the law as of the date Patagonia filed its .patagonia application.

V. Consistent With Its Values, Patagonia Has Submitted its .patagonia Application in Good Faith, with Good Intent and Full Transparency.

Patagonia values its contribution toward combatting environmental destruction, making a positive social impact, and achieving profits through principles. Its commitment to these efforts is reflected throughout all areas of its business, including its actions related to its .patagonia application. Patagonia has submitted its .patagonia application to ICANN in good faith, with beneficial intent and full transparency. Patagonia looks forward to providing the general public, the outdoor industry, and all existing and future consumers of PATAGONIA products and services with an authenticated and more secure experience under the .patagonia gTLD.

GAC Advice Response Form for Applicants

Patagonia's passion for preserving wilderness terrain and for restoring damaged areas to their original, natural condition drives the company to do all it can to reverse the decline in the health of the planet. In 2012, Patagonia became California's first Benefit Corporation. While Patagonia's commitment to its environmental mission has long been reflected in its broad range of activities, Benefit Corporation status formally requires Patagonia to commit to its environmental mission in its Articles of Incorporation, and to publish independently verified reports on its social and environmental performance. Other key benefit purposes are: (1) donating 1% of annual gross sales to environmental causes; (2) building the best product with no unnecessary harm; (3) conducting operations causing no unnecessary harm; (4) sharing best practices with other companies; (5) being transparent; and (6) providing a supportive work environment.

Since 1985, Patagonia has donated at least 1% of its sales to hundreds of grassroots environmental organizations around the world. To date, it has awarded over \$46 million in cash and in-kind donations. In 2002, Patagonia founder Yvon Chouinard co-founded 1% For the Planet, which encourages other business leaders to make similar pledges. That initiative now has more than 1,000 members. In 1989, Patagonia co-founded the Conservation Alliance, which has brought together more than 185 companies to support environmental organizations. Since its inception, the Conservation Alliance has contributed close to \$12 million to such organizations and plans to disburse \$1.5 million in 2013.

Patagonia is equally committed to reducing the impact of its own business on the environment. Since 2000, Patagonia has worked with the independent bluesign standard for textiles to evaluate and reduce resource consumption and to screen raw materials used in its supply chain. Since 2001, it has been a Participating Company in the Fair Labor Association, a multi-stakeholder organization that acts as a third-party monitor of its members' factories. Since 2005, Patagonia has recycled 56.6 tons of outdoor clothing through its Common Threads Partnership, which facilitates re-use of pre-owned clothes through eBay, the world's largest marketplace for clothing and apparel. And in 2010, Patagonia co-founded the Sustainable Apparel Coalition, a group of 49 industry leaders in apparel and footwear who work with nonprofits and NGOs to reduce the impact of their businesses on the environment and society.

In May 2013, Patagonia launched \$20 Million & Change, an investment fund set up to help like-minded start-up companies. Through it, Patagonia aims to invest in companies working to bring about positive change in five critical areas: clothing, food, water, energy, and waste. The title is a nod to the fact that \$20 million is a starting amount with the ability to grow, and more important, the ability to "change" the way business is done. Startups funded by \$20 Million & Change must exhibit Patagonia's core values.

Patagonia also values transparency and acting in good faith. By way of example, the company provides information to its customers about its factories and key suppliers and their practices through its Footprint Chronicles microsite. Consistent with these values, Patagonia has proceeded in good faith and reasonable reliance on the rules set forth in the Applicant Guidebook. Its .patagonia application complies with all applicable rules in the Guidebook, not least those governing the use of Geographic Names as gTLDs.

GAC Advice Response Form for Applicants

Also consistent with its values, Patagonia has sought to open a dialogue regarding its .patagonia application with the governments of the Argentine Republic and the Republic of Chile. Ms. Hilary Dessouky, Patagonia’s General Counsel and Vice President, wrote in early February to the Argentine and Chilean Ambassadors to the United States to advise that Patagonia did not intend to withdraw its .patagonia application; and to request a meeting (in person in Washington, DC or by telephone) to discuss their respective country’s concerns regarding the .patagonia application and to explore the possibility of remedial measures other than withdrawal of the .patagonia application. Patagonia eventually received a response from the Chilean Embassy on April 5, 2013 – the second day of GAC consultations in Beijing – and from the Argentine Embassy on April 10, 2013 – the last day of GAC consultations in Beijing. Because of scheduling issues (including Patagonia’s counsel’s presence in Beijing for the ICANN Meeting and Ms. Dessouky’s international business travel), it was not possible to meet with either country’s representatives at that time.

In the meantime, Patagonia filed a PIC Specification for its .patagonia application. Exhibit D. Because the consultation process with the Governments of the Argentine Republic and the Republic of Chile had not yet concluded, Patagonia believed that any substantive, completed PIC Specification would be both incomplete and materially prejudicial to such discussions. Accordingly, Patagonia reserved its rights to submit to ICANN in the future a completed PIC Specification and intends to do so if the completed discussions result in Patagonia’s agreement to implement certain remedial measures.

An initial phone meeting occurred on May 2, 2013 among Ms. Dessouky, Patagonia’s outside counsel, and representatives of the Chilean Embassy. During that meeting, representatives of the Chilean Embassy communicated the general position of the Republic of Chile, but were unable to provide any reactions to remedial measures proposed by Patagonia or any meaningful guidance regarding the Republic of Chile’s view as to whether its concern is capable of being remediated other than through withdrawal of the .patagonia application. The parties agreed to continue meeting after the Chilean Embassy representatives received further instructions from capital.

A phone meeting with the Argentine Embassy is scheduled for May 13, 2013.

* * * *

Patagonia’s .patagonia application complies with all relevant provisions of the Applicant Guidebook, and all provisions of Argentine and Chilean law. The .patagonia application must be evaluated by the Guidebook standards on Geographic Names, which the Board and GAC have accepted, and not by new, arbitrary criteria. Patagonia respectfully submits that the Board should determine not to accept GAC Advice regarding Patagonia’s .patagonia application and should allow the .patagonia application to proceed now beyond Initial Evaluation.

EXHIBIT A

DECLARATION OF GUSTAVO P. GIAY

I, Gustavo P. Giay, hereby declare as follows:

1. I am a partner at the law firm of Marval, O'Farrell & Mairal, a law firm from Buenos Aires, Argentina. I make this declaration in support of Patagonia, Inc.'s .patagonia gTLD application, Appl. No. 1-1084-78254 (the "Application").

2. I received my law degree from Universidad de Buenos Aires in 1994, and in 1997 I obtained an L.L.M. from Northwestern University. Since then I have specialized my legal practice in intellectual property. I represent Patagonia, Inc. in the Argentine Republic in connection with the Application. I am familiar with the facts set forth in this declaration and could, if called as a witness, testify competently with regard to them.

3. Patagonia is a region of the Argentine Republic comprising the provinces of La Pampa, Río Negro, Neuquén, Chubut, Santa Cruz, and Tierra del Fuego, Antártida e Islas del Atlántico Sur. Patagonia is not itself a province of the Argentine Republic. The region has a total surface area of 1,911,605 square kilometers and a population totaling 2,348,973 inhabitants (2010 data)

4. Patagonia, Inc. owns the following trademark registrations in the Argentine Republic containing or consisting of the name "PATAGONIA":

<u>Trademark</u>	<u>Country</u>	<u>Current Reg. No.</u>	<u>Reg. Date</u>	<u>Classes</u>	<u>Notes</u>
PATAGONIA	Argentina	1,893,074	09-30- 1992	25	Originally registered as No. 1,404,964.
PATAGONIA & Design	Argentina	1,984,365	09-30- 1992	25	Originally registered as No. 1,404,158.
PATAGONIA (Stylized)	Argentina	2,019,929	12-30- 1993	18	Originally registered as No. 1,493,559.

<u>Trademark</u>	<u>Country</u>	<u>Current Reg. No.</u>	<u>Reg. Date</u>	<u>Classes</u>	<u>Notes</u>
PATAGONIA & Design	Argentina	2,019,930	12-30- 1993	18	Originally registered as No. 1,493,560.
PATAGONIA (Stylized)	Argentina	2,068,861	09-12- 1995	25	Originally registered as No. 1,574,931.
PATAGONIA & Design	Argentina	2,180,825	05-27- 1997	28	Originally registered as No. 1,633,794.
PATAGONIA (Stylized)	Argentina	2,342,741	12-18- 1998	28	Originally registered under No. 1,710,930
PATAGONIA UNIVERSITY	Argentina	2,136,282	07-18- 2005	16	
PATAGONIA UNIVERSITY	Argentina	2,136,286	01-09- 2007	41	
PATAGONIA UNIVERSITY	Argentina	2,136,288	01-09- 2007	42	
PATAGONIA UNIVERSITY	Argentina	2,137,233	01-09- 2007	9	

By virtue of Patagonia, Inc.'s ownership of the above trademark registrations, Argentine law affirmatively protects Patagonia, Inc.'s use of the name "Patagonia" in its trademarks.

5. Argentine Trademark Law does not contain any provisions that would allow the Trademark Office or any other administrative agency to unilaterally revoke, cancel, or withdraw Patagonia, Inc.'s trademark registrations identified in paragraph 4.

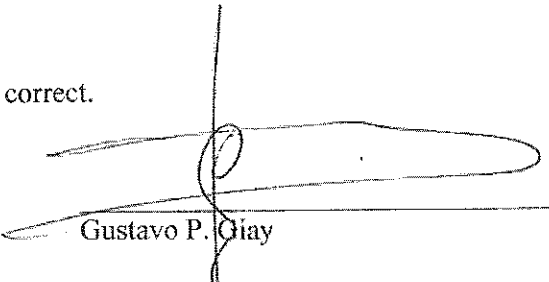

6. Argentine trademark law contains no specific protections for or prohibitions of the use of the name "Patagonia." There are no special legal protections for or limitations on use of the name "Patagonia" by itself under Argentine federal law.

7. Argentine federal law does not prohibit Patagonia, Inc., or any other entity from applying for and operating a .patagonia gTLD. Similarly, there are no restrictions on registration of <patagonia> domain names in the .ar ccTLD.

8. The Joint Ministerial Statement signed by the Governments of the Republic of Chile and the Argentine Republic on November 8, 2012 regarding “the importance of protecting the use of the name Patagonia,” does not have the force of law in the Argentine Republic. It cannot be the basis of an enforcement action, nor can it be enforced either privately or by the government, and as such it does not prohibit or limit the use of the name “Patagonia,” generally or specifically as a gTLD (e.g., .patagonia).

9. The Montevideo Declaration of the Fourth Ministerial Conference on the Information Society in Latin America and the Caribbean, dated April 5, 2013, which declares an intent to “[r]eject any attempt to appropriate, without the consent of the respective countries of Latin America and the Caribbean, the denominations ‘amazon’ and ‘patagonia’ in any language,” does not have the force of law in the Argentine Republic. It cannot be the basis of an enforcement action, nor can it be enforced either privately or by the government, and as such it does not prohibit or limit the use of the name “Patagonia,” generally or specifically as a gTLD (e.g., .patagonia).

I declare that the foregoing is true and correct.

Gustavo P. Giay

MAY 9, 2013.-

DECLARATION OF BERNARDO SERRANO

I, Bernardo Serrano, hereby declare as follows:

1. I am the senior partner at the law firm of Estudio Villaseca. I make this declaration in support of Patagonia, Inc.'s .patagonia gTLD application, Appl. No. 1-1084-78254 (the "Application").

2. I received my law degree from Pontificia Universidad Católica de Chile in 1973. Since that date, my legal practice has specialized in industrial and intellectual property, as well as Internet-related matters. I represent Patagonia, Inc. in the Republic of Chile in connection with intellectual property matters. I am familiar with the facts set forth in this statement and could, if called as a witness, testify competently with regard to them.

3. "Patagonia" is not the name of any official region, province, or any other political or geographic division of the Republic of Chile. Rather, it is the name of a determined portion of land without official political boundaries in the south of the Republic of Chile, between the Andes Mountains and the Pacific Ocean. Traditionally, Chilean Patagonia is considered to comprise the Palena province and the Aysen and Magallanes regions. However, according to a minority of sources, Patagonia also includes portions of the Los Ríos region, as well as the Osorno, Llanquihue, and Chiloé provinces.

4. Patagonia, Inc. owns the following trademark registrations in the Republic of Chile containing or consisting of the name "PATAGONIA":

<u>Trademark</u>	<u>Current Reg. No.</u>	<u>Reg. Date</u>	<u>Classes</u>	<u>Notes</u>
PATAGONIA	694,562	06-03-2004	25	Originally registered 01-18-1984 as No. 282,191.
PATAGONIA	871,525	11-15-2009	18	Originally registered 11-15-1999 as No. 552,927.

<u>Trademark</u>	<u>Current Reg. No.</u>	<u>Reg. Date</u>	<u>Classes</u>	<u>Notes</u>
PATAGONIA	754,375	01-31-2006	21, 9	
PATAGONIA	894,419	08-18-2010	35	
PATAGONIA CHILE	936,338	10-27-2011	35	

By virtue of Patagonia, Inc.'s ownership of the above trademark registration, Chilean law affirmatively protects Patagonia, Inc.'s use of the name "Patagonia" in its trademarks.

5. Under Chilean trademark law, the National Institute of Intellectual Property cannot unilaterally cancel, revoke, or withdraw Patagonia, Inc.'s trademark registrations.

6. Chilean law contains no protections for, or limitations or prohibitions on, the use of the name "Patagonia."

7. Chilean law does not refer to gTLDs, and does not prohibit Patagonia, Inc., or any other entity, from applying for or operating a .patagonia gTLD. Similarly, there are no restrictions on registration of the domain name <patagonia> in the .cl ccTLD.

8. The Joint Ministerial Statement signed by the Governments of the Republic of Chile and the Argentine Republic on November 8, 2012 regarding "the importance of protecting the use of the name Patagonia" reflects a statement of political intent. This Statement does not have the force of law in the Republic of Chile. It cannot be the basis of an enforcement action, either privately or by the government, and as such it does not prohibit or limit use of the name "Patagonia," generally or specifically as a gTLD (e.g., .patagonia).

9. The Montevideo Declaration of the Fourth Ministerial Conference on the Information Society in Latin America and the Caribbean, dated April 5, 2013, which declares an intent to reject any attempt to appropriate, without the consent of the respective countries of Latin

America and the Caribbean, the denominations 'amazon' and 'patagonia' in any language," reflects a statement of political intent. This Declaration does not have the force of law in the Republic of Chile. It cannot be the basis of an enforcement action, either privately or by the government, and as such it does not prohibit or limit use of the name "Patagonia," generally or specifically as a gTLD (e.g., .patagonia).

10. I declare that the foregoing is true and correct.

¹ Country and entity names are those used in the list of [GAC Representatives](#) available on the GAC's website.

² A trademark registrations issued by the Benelux Office for Intellectual Property provides protection in Belgium, Luxembourg, and Netherlands. For purposes of this chart, these registrations have been counted only as being Belgian registrations.

³ A trademark registration issued by OHIM, referred to as a Community Trade Mark ("CTM"), provides protection in all member countries of the European Union. Accordingly, Patagonia's CTM registrations of its PATAGONIA Trademarks provide protection in the following EU-member countries that are also GAC members: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Italy, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and United Kingdom. For purposes of this chart, these registrations have been counted only as being European Commission registrations.

EXHIBIT D

gTLD String: .patagonia
Applicant Entity Name: Patagonia, Inc.
Application ID#: 1-1084-78254

SPECIFICATION 11

PUBLIC INTEREST COMMITMENTS

1. Registry Operator will use only ICANN accredited registrars that are party to the Registrar Accreditation Agreement approved by the ICANN Board of Directors on [date to be determined at time of contracting], 2013 (or any subsequent form of Registrar Accreditation Agreement approved by the ICANN Board of Directors) in registering domain names. A list of such registrars shall be maintained by ICANN on ICANN's website.

2. Registry Operator will operate the registry for the TLD in compliance with all commitments, statements of intent and business plans stated in the following sections of Registry Operator's application to ICANN for the TLD, which commitments, statements of intent and business plans are hereby incorporated by reference into this Agreement. Registry Operator's obligations pursuant to this paragraph shall be enforceable by ICANN and through the Public Interest Commitment Dispute Resolution Process established by ICANN ((posted at [url to be inserted when final procedure is adopted]), as it may be amended by ICANN from time to time, the "PICDRP"). Registry Operator shall comply with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PICDRP panel and to be bound by any such determination.

Patagonia, Inc.'s Reservation of Rights

Patagonia, Inc. ("Patagonia") has no objection in principle to submitting a Public Interest Commitments ("PIC") Specification. However, for the reasons set forth below, Patagonia hereby reserves its rights to submit to ICANN in the future a completed Section 2 of the PIC Specification:

A. Patagonia has requested the opportunity to meet with representatives of the Governments of the Argentine Republic and the Republic of Chile to discuss the concerns the Governments of the Argentine Republic and the Republic of Chile, respectively, have raised in their Early Warnings, to provide more detail about Patagonia's plans for the use of .patagonia, and to discuss potential alternative remedial measures to address the issues raised by the respective Governments in their respective Early Warnings. The requested meetings and discussions have not yet occurred. Until the consultation process with the Governments of the Argentine Republic and the Republic of Chile has been concluded, Patagonia believes that any substantive, completed Section 2 of the PIC Specification submitted by Patagonia at this time would be both incomplete and materially prejudicial to such discussions.

B. Sections 2 of the PIC Specification require Registry Operators to agree to be bound by a Public Interest Commitment Dispute Resolution Process that has not yet been drafted, that has not yet been disclosed, and, most importantly, about which the ICANN community – including new gTLD applicants such as Patagonia – has been unable to provide any meaningful opportunity for review, comment, and consultation.

C. ICANN has not stated if a completed Section 2 of the PIC Specification is a prerequisite to an Applicant's adoption and implementation of restrictions on the registration and use of domain names in the applied-for gTLD to itself where the Applicant has previously set forth such restrictions in its Question 18 response contained in its application.

3. Registry Operator agrees to perform following specific public interest commitments, which commitments shall be enforceable by ICANN and through the PICDRP. Registry Operator shall comply

with the PICDRP. Registry Operator agrees to implement and adhere to any remedies ICANN imposes (which may include any reasonable remedy, including for the avoidance of doubt, the termination of the Registry Agreement pursuant to Section 4.3(e) of the Registry Agreement) following a determination by any PICDRP panel and to be bound by any such determination.

Patagonia, Inc.'s Reservation of Rights

Patagonia, Inc. ("Patagonia") has no objection in principle to submitting a Public Interest Commitments ("PIC") Specification. However, for the reasons set forth below, Patagonia hereby reserves its rights to potentially submit to ICANN in the future a completed Section 3 of the PIC Specification:

A. Patagonia has requested the opportunity to meet with representatives of the Governments of the Argentine Republic and the Republic of Chile to discuss the concerns the Governments of the Argentine Republic and the Republic of Chile, respectively, have raised in their Early Warnings, to provide more detail about Patagonia's plans for the use of .patagonia, and to discuss potential alternative remedial measures to address the issues raised by the respective Governments in their respective Early Warnings. The requested meetings and discussions have not yet occurred. Until the consultation process with the Governments of the Argentine Republic and the Republic of Chile has been concluded, Patagonia believes that any substantive, completed Section 3 of the PIC Specification potentially submitted by Patagonia at this time would be both incomplete and materially prejudicial to such discussions.

B. Section 3 of the PIC Specification require Registry Operators to agree to be bound by a Public Interest Commitment Dispute Resolution Process that has not yet been drafted, that has not yet been disclosed, and, most importantly, about which the ICANN community – including new gTLD applicants such as Patagonia – has been unable to provide any meaningful opportunity for review, comment, and consultation.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Subject: Response to the Beijing Communiqué (11 April, 2013)

To the Board of the Internet Corporation for Assigned Names and Numbers’ (ICANN) and the full membership of its Governmental Advisory Committee (GAC):

We would like to not only acknowledge receipt of the GAC’s most recent communiqué from the April 2013 ICANN meeting in Beijing, but would also like to thank the entire GAC for their continued, tireless efforts in helping create a safe and successful program to introduce new TLDs.

We foresee no problems implementing any of the GAC advice that is approved as policy by the ICANN Board, both for applications cited in the GAC’s “Safeguard Advice,” and the rest of our portfolio. We look forward to guidance from the ICANN Board on requirements and implementation.

In our Annex, we address specific points within the GAC’s Beijing Communiqué.

GAC Advice Response Form for Applicants

We have always have had every intention to comply with all decisions reached by the ICANN Board, including those arising from interaction with the GAC, such as but not limited to, protections for geographic names, IGOs, the IOC and Red Cross, etc.

We note that there is no clearly defined process for incorporating and committing operations to the relevant GAC advice and that the ICANN Board has not yet determined how it will interpret, incorporate, and enforce the GAC Advice. We acknowledge the advice and will comply with all relevant decisions. However, we are not prepared to submit formal change requests to our applications at this stage. Instead, we suggest a process to incorporate any requirements into the Registry Agreements of the TLDs in question as required or requested by the ICANN Board. It is important that this process does not further delay the New TLD Program.

We also encourage the Board to discuss whether the current GAC advice follows the definition and role of the process as outlined in the Applicant Guidebook. It is our view that the majority of the current advice does not follow the focused role of GAC advice as defined in the Applicant Guidebook. While this current GAC document seems to be more aligned with top-down policy development, it does not forestall our ability to implement and comply with all relevant decisions.

We look forward to continuing to work with the GAC and all other ICANN stakeholders to bring innovation and greater identity to the top level. We reaffirm our commitment to adhere to all relevant agreements and further participate in the development of best practices for new TLD registries and the DNS industry as a whole.

Ray King
Top Level Design, LLC

Annex

The following feedback addresses points brought up by the GAC in Section IV of its Beijing CommuniquÃ©:

1. We are of the opinion that blocking all IGO names as outlined by the GAC in previous advice will remove a significant number of important acronyms and terms from use that do not threaten to confuse users or impede the work of the IGO in question. We believe that the likelihood of user confusion with regards to specific TLDs should be considered in the implementation process for IGO related blocks. We look forward to the timely resolution of this issue and intend to comply in full with the outcome.
2. We join the GAC in commending the parties involved in the RAA discussions on their progress and hope that wide support and adoption of a new RAA can resolve any need to explicitly link it to our own New TLD Registry Agreements. We are opposed to establishing this link at this time as it creates a precedent of linking disparate negotiations while the negotiations remain ongoing. We are not aware of any such precedent and we believe that any attempt to utilize ongoing discussions and negotiations between ICANN and one of its contracted parties to

GAC Advice Response Form for Applicants

influence separate, concurrent negotiations with another contracted party is contrary to ICANN's established multistakeholder model.

3. We request guidance from the ICANN Board regarding any unique way of incorporating GAC Advice other than the change request process outlined in the Applicant Guidebook. We are concerned that the change request process will significantly affect the timing for signing our Registry Agreements and launching our TLDs. We encourage the Board to develop a model that addresses these very serious timing concerns.

II.

Three of our applied for TLDs were specifically mentioned in the GAC's Annex I, Category 1, "Consumer Protection, Sensitive Strings, Regulated Markets," they are: .llc, design, .art.

We would like to note that "art" and "design" are not regulated in the same way banks, hospitals, and legally incorporated entities are. Thus, no section of the art/design markets should be seen as having special authority in a .art/.design TLD. However, it seems that the GAC has narrowed its concern with .art and .design to the intellectual property realm. We stress that our protections for our entire portfolio will guarantee that their concerns related to intellectual property are seriously and adequately addressed.

We believe that, in contrast to .design and .art, .llc (recognized acronym for "limited liability company") does in fact represent a regulated market as there is a clear entry barrier for recognition and participation in this space. We have provided our intent to monitor this space effectively in our original application for .llc (#1-1086-42934) and once again confirm those intentions here.

To address the numbered GAC points in this section:

1. We will hold the registrants of these 3 TLDs to a rigorous Acceptable Use Policy (AUP), which will be crafted to address all GAC Advice as implemented by the ICANN Board.
2. All of our registrar partners will be required to have registrants acknowledge and agree to our acceptable use policy.
3. This provision does not naturally apply to these TLDs given that .llc, .art, and .design have no logical connection to financial or health related registration requirements and we will not be soliciting related information from our registrants.
4. There is no regulatory body that should be given authority over .art or .design, and we disagree with any claims otherwise for the aforementioned reasons. We note that LLC eligibility is recognized in the USA and is determined at the state level by the secretary of state or similar authority with jurisdiction over the applying entity. We will work with these empowered authorities to ensure that our registrants represent legitimate limited liability companies. This is already outlined in our original application (#1-1086-42934) and we refer those concerned to that document. To summarize, legitimate LLC standing will be verified via a pre-registration process and we hope to have a close working relationship with the secretaries of state, though

GAC Advice Response Form for Applicants

LLC status is verifiable via public, query-based databases and so successful follow-through on our commitment does not depend on the active participation of all relevant offices.

III.

The GAC goes on to further advise the board that some of the strings specified should require pre-registration verification. While the specific strings are not identified, we believe that in our case this only logically applies to .llc.

As noted above, we will utilize pre-registration verification of LLC status for the successful registration of the .llc TLD; we will reach out to and welcome the active participation of all relevant authorities to help develop policies and procedures to ensure that registrations are verified as efficiently as possible.

IV.

We note the many questions asked by the GAC related to PICs in their Annex II and would like to stress that the ambiguities of the program influenced our decision to not submit PICs.

Respondent:

Applicant Name	STADA Arzneimittel AG
Application ID	1-1089-42298
Applied for TLD (string)	STADA

Response:

Summary

STADA ARZNEIMITTEL AG welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

STADA ARZNEIMITTEL AG welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

General principles of operations for .STADA by STADA ARZNEIMITTEL AG

STADA ARZNEIMITTEL AG would like to state, that:

1. We will respect human rights and fundamental freedoms

GAC Advice Response Form for Applicants

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.
- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

Detailed commitments by STADA ARZNEIMITTEL AG for .STADA based on General Safeguards

STADA ARZNEIMITTEL AG, the applicant for the .STADA top-level domain, will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination. The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - STADA ARZNEIMITTEL AG will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. STADA ARZNEIMITTEL AG will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - STADA ARZNEIMITTEL AG will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets,

GAC Advice Response Form for Applicants

phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

3. Security checks - While respecting privacy and confidentiality, STADA ARZNEIMITTEL AG will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If STADA ARZNEIMITTEL AG identifies security risks that pose an actual risk of harm, STADA ARZNEIMITTEL AG will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

4. Documentation - STADA ARZNEIMITTEL AG will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. STADA ARZNEIMITTEL AG will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - STADA ARZNEIMITTEL AG will ensure that there is a mechanism for making complaints to STADA ARZNEIMITTEL AG that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, STADA ARZNEIMITTEL AG shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

STADA ARZNEIMITTEL AG would like to note that registration policies will be setup according to this request.

STADA ARZNEIMITTEL AG would like to note that .STADA is not a generic term and therefore the GAC Advice on exclusive access of generic terms does not apply. Furthermore STADA ARZNEIMITTEL AG would like to state that the .STADA is not in the public interest, but a representation of Intellectual property rights of STADA ARZNEIMITTEL AG.

STADA ARZNEIMITTEL AG reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Dadotart, Inc.
Application ID	1-1097-20833
Applied for TLD (string)	.ART

Response:

Dadotart agrees in principle with the points which ICANN’s Government Advisory Committee (GAC) has raised in connection with the need to safeguard consumers, and submits the following clarifications.

A) Community Applications

As an applicant for the .ART TLD on behalf of the Arts Community, Dadotart expresses its support to the GAC position stated in its Beijing Communiqué, Point IV.e to the effect: “..that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.”

B) Safeguards for the .ART TLD

Dadotart further concurs with the GAC when it states that TLDs specially relevant to the protection of consumers' trust must be operated in full conformity with applicable laws and apply relevant policies in an open and non-discriminatory manner. The Dadotart application contains all the necessary safeguards to guarantee that registrants in the .ART TLD not only comply with applicable laws, but that the namespace enables the highest level of consumer trust.

Registration policies.

As provided in the Dadotart application, registration in ART will be available only to members of the Arts Community, under the following conditions:

GAC Advice Response Form for Applicants

(a) Eligibility: The Art Community is comprised of individuals, groups of individuals and legal entities who identify themselves with the Arts and actively participate in or support Art activities or the organization of Art activities.

(b) the registrant's use of the roman name will be subject to the further requirement that the registrant's participation or support in the Art Community arena and the registrant's use of the domain name must be:

- (i) Generally accepted as legitimate;
- (ii) Of a nature that demonstrates the registrant's membership in the Art Community; and
- (iii) Conducted in good faith at the time of registration and thereafter.

(In order to facilitate enforcement procedures, registrants must state at the time of registration their intent of use for the concrete domain name. Please check Dadotart's response in the application to Q20(e) for a more detailed description of the policy described above).
Enforcement Mechanisms.

As set out in the Dadotart application, Dadotart will implement enforcement mechanisms to maintain the quality of the .ART TLD namesake and its compliance with the rules, and mitigate possible abuses.

In this regard, we refer you to the .ART TLD application and the detailed explanations in Dadotart's responses to the Questions noted in each of the following categories:

1. Rapid Takedown Policy for cases of general malicious conduct (Q28.1)
2. Single Point of Contact for Abusive behavior on the Registry's side (Q28.3)
3. Ex-Oficio Random Checks of the usage of registered Domain Names (Q20.e)

We firmly believe that in conjunction with our registration policies and ICANN-mandated policies and Dispute Resolution Procedures, Dadotart adequately addresses all the safeguards outlined by the GAC both for those applicable to all new gTLDs as well as the additional safeguards advised for certain categories of new gTLDs.

C) Conclusion

With regard to the more operational and policy specific points contained in the GAC advice, Dadotart's looks forward to the output of ICANN's current public forum in connection with the GAC's most recent advice.

Dadotart, Inc. : May 09, 2013

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1099-17190
Applied for TLD (string)	.CLOUD

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Government Advisory Committee (GAC) Advice and for considering the arguments put forth in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .CLOUD application described in the below Sections of the Communique:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category
- Section IV, Annex I, Category 2.2 – Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and we also know that the GAC plays an important role within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC advice.

Purpose of the .CLOUD TLD

CRR initially applied for the .CLOUD TLD in order to provide a dedicated namespace for cloud offerings for its parent company, Google. On March 7, 2013, CRR submitted [Public Comments](#) responding to the Board's request for input on "Closed Generic" applications and announced that we would work to amend our application to allow third parties to register within the TLD as well. On April 6, 2013, CRR sent a [letter](#) to Christine Willett, ICANN's New gTLD Program General Manager, stating our plan to amend our .CLOUD application from an exclusive access model to a restricted access TLD model. We continue to work with others in the Cloud community to define the model for the TLD, but we intend for it to be used to offer cloud services to developers.

Category 1 GAC Safeguard Advice Does Not Apply to CRR's .CLOUD Application

The GAC's Category 1 safeguard advice asks that strings that are linked to regulated or professional sectors provide additional consumer protections.

Category 1 safeguard advice suggests additional safeguards that should apply to the .CLOUD string under the Intellectual Property Category. It is our belief that the safeguard advice the GAC has requested for this string does not apply to CRR's application for .CLOUD as "cloud" is not part of a regulated or professional sector involving a level of implied trust from consumers and carrying higher levels of risk associated with consumer harm. The term "cloud" is a generic word that is not directly related to a specific type of regulated offering, nor is it generally associated with a specific type of content for which intellectual property safeguards would be appropriate. Further, CRR has adopted a set of safeguards that go above and beyond safeguards required by the Applicant Guidebook and as such, we feel that all of our TLDs will offer consumers considerable protections against abuse.

Category 2.2 - Exclusive Access Safeguard Advice Does Not Apply to CRR's .CLOUD

CRR notes .CLOUD is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. As noted above, our application for .CLOUD was originally submitted to ICANN as an exclusive access TLD but have subsequently announced our intention to modify the application to be a restricted access model, limited to uses related to cloud service offerings. We are currently in active discussions with others in the community and will submit a change request to ICANN with details of changes to our application in the near future. Exclusive access model means the TLD is limited to the exclusive use of the applicant, whereas we intend for the TLD to be open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to those who meet the restriction guidelines. Therefore, it is our belief that CRR's

application for .CLOUD is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its application for .CLOUD should not be included on the GAC's list of applications subject to either Category 1 or Category 2.2 safeguard advice. Category 1 GAC Advice is meant to address higher risk levels associated with strings linked to regulated or professional sectors. .CLOUD is targeted at cloud service offerings, and is not linked to any regulated or professional sector nor is it related to any particular type of intellectual property. Similarly, .CLOUD will not be operated on an exclusive-use basis so the Category 2.2 advice should not apply. Therefore, we respectfully request that CRR's application for .CLOUD not be subject to any string-specific safeguard advice from the GAC.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1099-17603
Applied for TLD (string)	.BOOK

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .BOOK application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access
- Section IV, Annex I, Category 2.2 – Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .BOOK

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .BOOK, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .BOOK string under the Intellectual Property category. It is our belief the safeguard advice the GAC has is already addressed in our application for .BOOK. The following table outlines the GAC's safeguard advice and how our .BOOK application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process..."
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .BOOK application. The .BOOK TLD targets authors, publishers, and online retailers. We do not expect registrants of the .BOOK TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	CRR will also work with the appropriate industry associations to mitigate the risk of illegal activity.
5	Registry will require registrants to provide	During the registration process, registrants

	<p>a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.</p>	<p>are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."</p>
--	--	--

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .BOOK and Category 2.1 Safeguard Advice for .BOOK

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .BOOK string.

CRR's application for .BOOK is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .BOOK community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .BOOK. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt

enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.
- *Entertainment-Specific Protections:* In addition to the enhanced protections that we will offer for all of CRR's new gTLD registries, certain "entertainment-targeting" registries will require registrars to include language in their registrar-registrant agreement that the registrant must be authorized or licensed to post any copyrighted content.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .BOOK

CRR notes .BOOK is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .BOOK is a restricted access TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our restricted access model means the TLD is open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to any registrant who meets restriction guidelines. Therefore, it is our belief that CRR's application for .BOOK is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .BOOK application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2.1 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. In addition, because our application for .BOOK is a restricted access TLD model and not an exclusive access TLD model it is our belief that CRR's application for .BOOK is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Top Level Domain Holdings Limited
Application ID	1-1110-17668
Applied for TLD (string)	.sale

Response:

Following GAC advice to the ICANN Board ("GAC Communiqué – Beijing") regarding the GAC's concerns about the string .sale, Top Level Domain Holdings Limited has withdrawn its application for .sale.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	DotMusic Limited
Application ID	1-1115-14110
Applied for TLD (string)	MUSIC

Response:

DotMusic commends GAC for its advice corresponding to sensitive strings, namely music-themed strings which are highly vulnerable to piracy and copyright infringement to serve the global public interest and the creator community at-large. We agree that applications for sensitive strings (such as .MUSIC, .TUNES, .SONG and .BAND.) without enhanced safeguards that protect copyright as well as appropriate policies that do not proactively protect intellectual property and mitigate abuse should be disqualified. Furthermore, we fully agree with GAC's assessment on the issues of exclusive and restricted access to TLDs. If legitimate members of a community are excluded from registration that would constitute material harm to the legitimate interests of a significant portion of that corresponding community. Any application that is not inclusive of all legitimate constituents, such as "Do-It-Yourself" artists or music fans, creates a likelihood of material harm, anti-competitive issues and unfair discrimination, and should be disqualified. These points were also reiterated in the music-themed Community Objections we filed with the International Chamber of Commerce (ICC) for the strings .MUSIC, .TUNES, .SONG and .BAND.

We would also like to strongly reiterate that ICANN must uphold their "New gTLD Application Change Request Process and Criteria" rules in some cases where material changes to competing applications would negatively harm some applicants (who have already incorporated and surpassed GAC's safeguard advice in their application) and benefit others in the process. Such changes by competing applicants would be deemed material (<http://newgtlds.icann.org/en/applicants/customer-service/change-requests>) and would negatively affect and inflict harm on our community-based application since our application's policies surpass GAC's safeguards and we have incorporated additional safeguards to serve the interests of the music community. It would be deemed grossly unfair for competing applicants to be allowed to materially change their applications as a direct response to GAC advice and Community Objections (such as those we filed with the ICC against .MUSIC, .TUNES, .SONG, .BAND applicants outlining the same issues that GAC has expressed in their Beijing

GAC Advice Response Form for Applicants

Communique). We agree and reiterate GAC's advice "that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information."

Through our public meetings (<http://www.music.us/events.htm>) and interactions with the global music community, we have incorporated the most enhanced safeguards of any .music applicant (or any other applicant that relates to a sensitive string strongly associated to copyright) and will continue to develop more technology to further thwart piracy and enable stronger copyright protection. We agree with GAC's advice that strings, such as music-themed strings, "are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm."

Our application's safeguards surpass those illustrated in GAC's Communique including:

- a) WHOIS Verification System to verify WHOIS accuracy in the form of email and phone authentication of registrants. As indicated in our community-based application, DotMusic will work dedicatedly and directly with law-enforcement agencies, authorities, ICANN working Groups, and other security experts in the ongoing development of promoting WHOIS data accuracy.
- b) Certification by Registrant that the domain name will be used only for licensed, legitimate activities, and not to facilitate piracy
- c) Rightsholder Complaint Mechanism that certification is being violated or that piracy or other abuses are being enabled. Complaints trigger registry and registrar investigations, with prompt notice to registrants, a reasonable opportunity for them to respond, and corrective action will take place in the case of violations
- d) Auditing Mechanism that certification is being respected with appropriate remediation steps following when violations are detected.
- e) Negative consequences for registrants who violate certification, allow infringing activities, conduct abusive behavior and falsify registrant contact and WHOIS data.
- f) Rotating multi-stakeholder board of neutral and fair representation of all music constituents, including commercial and non-commercial entities. As part of our community-based mission we have established a working relationship with relevant bodies within the music community (<http://www.music.us/supporters.htm>) and have work closely with them to develop our policies to serve the music community, to protect intellectual property and mitigate abuse. We agree with the GAC Beijing Communique that applicants must "establish a working relationship with the relevant regulatory, or industry self--regulatory, bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities" so there is no conflict of interest in the management of music-themed strings and that they are operated in the global public interest and serving the creator community, not harming them. We agree that non-community-based application that does not incorporate a multi-stakeholder governance of relevant bodies and constituents must be disqualified.

We are the ONLY music-themed string applicant (or any other applicant that relates to a sensitive string strongly associated to copyright) that includes:

- (i) Name Selection Policy to ensure only music-related names are registered as domains under .MUSIC, with the following restrictions: (1) A name of (entire or portion of) the musician, band,

GAC Advice Response Form for Applicants

company, organization, e.g. the registrants “doing business as” name (2) An acronym representing the registrant (3) A name that recognizes or generally describes the registrant, or (4) A name related to the mission or activities of the registrant. This policy is central to preventing cybersquatting and not allowing illegitimate 3rd-parties from registering others’ names

(ii) Music-dedicated Usage Policy that ensures usage and content only relate to music activities. This raises the quality level of .music domains and ensures that non-music related content, such as pornography, is not acceptable

(iii) Dedicated Music Policy and Copyright Infringement Dispute Resolution Policy (MPCIDRP)

(iv) Globally Protected Marks List that includes RIAA-certified platinum artists/bands and globally-recognized music brands

(v) Random compliance audits

(vi) Registrant validation and authentication of email and phone

We are also developing further safeguard enhancements in the form of content theft protection mechanisms such as content crawling and fingerprinting technology which may be used in conjunction with our premium channels and song registry as described in our application.

The primary objective of our enhanced safeguards is to improve user experience in terms of providing higher quality, legal music-focused destinations and to ensure that .music becomes a haven for legal consumption where monies flow to the music community not pirates or illegitimate sites.

We support any measure ICANN will incorporate to protect the intellectual property of the creator community and ensure that strings that are associated with copyright are not abused by pirates and bad actors.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Núcleo de Informação e Coordenação do Ponto BR - NIC.br
Application ID	1-1119-71934
Applied for TLD (string)	BOM

Response:

We welcome the GAC Input on the topic of safeguards applicable to all new gTLDs. Although some of the ideas are unfeasible, most measures of improvement to WHOIS accuracy are possible and would bring a higher degree of trust in the Domain Name System. A significant portion of those will be in place in the gTLD we've applied for even without a guidebook requirement of those provisions. We expect though these safeguards to be uniformly applied to all gTLD, both new and pre-existent. Most of the gTLD domains used in the DNS will still be from pre-2013 gTLDs for the years to come, and imposing burdens only on new gTLDs might hinder program objectives such as increasing competition, consumer choice and consumer trust. When such measures are applied through Consensus Policies, all gTLDs are required to follow and have contractual oversight of compliance. We also note that most of these topics are currently being discussed in the Expert Working Group on gTLD Directory Services, so any commitment at this point would possibly require modifications after the GNSO Policy based on the Working Group output is passed. Considering Consensus Policies are enforced on gTLD contracts through the Picket Fence, we decided not to file any Public Interest Commitments to address this advice.

Respondent:

Applicant Name	Guangzhou YU Wei Information Technology Co., Ltd.
Application ID	1-1121-22691
Applied for TLD (string)	广州

Response:

The applicant appreciates the opportunity to provide the response below to the ICANN Board of Directors regarding the GAC's advice concerning the applicant's applied for string 广州 (GUANGZHOU).

The applicant was aware of the requirement of a support or non-objection letter for its geographic name gTLD application from the relevant governments or public authorities. As the applicant is a legal entity established and conducting its TLD business in the People's Republic of China, the applicant anticipated that such letter would be issued by the Ministry of Industry and Information Technology (“MIIT”), according to No. 89 Announcement promulgated by the MIIT, before the closing of the new gTLD application window.

However, the applicant subsequently learned that the MIIT letter of support was contingent upon the applicant reaching an agreement with the Guangzhou municipal government in relation to the application.

The applicant then immediately commenced dialogues with the Guangzhou government, during which time, the applicant received the GAC Early Warning regarding the need to obtain a support or non-objection letter from the relevant governments or public authorities.

The applicant is continuing its dialogue with the Guangzhou government. In the last few months

Respondent:

Applicant Name	Ferrero Trading Lux SA
Application ID	1-1126-16883
Applied for TLD (string)	KINDER

Response:

Ferrero Trading Lux SA (Ferrero) submits the following response to the ICANN Governmental Advisory Committee’s (GAC) Advice provided in its Beijing Communiqué.

The GAC Communiqué states that for the following categories of strings, enhanced safeguards should apply: Children; Environmental; Health and Fitness; Financial; Gambling; Charity; Education; Intellectual Property; Professional Services; Corporate Identifiers; Generic Geographic Terms; Inherently Governmental Functions.

We note that our interpretation of the rationale of Annex 1 of the GAC Communiqué is to provide “enhanced safeguards” that should be applied to particular strings in certain categories which “are likely to invoke a level of implied trust from consumers, and carry higher levels of risk associated with consumer harm”.

Among the non-exhaustive list of strings that said safeguards should apply to, the GAC Communiqué provides the following applied-for gTLDs under the “Children” category: .kid, .kids, .kinder, .game, .games, .juegos, .play, .school, .schule, .toys. Nearly all of the strings listed with respect to “enhanced safeguards” include generic strings with unrestricted registration policies.

We note that the application for .KINDER is for a “closed” or single-entity single-use Registry filed by the company Ferrero Trading Lux SA (Ferrero), and which will not be open to any external registrant. The Ferrero Group was founded in 1946 in Alba, a town in Northwest Italy, and is a leading manufacturer of chocolate and other confectionery products. The trademark Kinder was created and registered worldwide as early as 1968 as a division of the Ferrero Group with the original mission of developing products targeting “mothers” and specifically dedicated to children and is nowadays a brand leader in the Confectionery market, with a presence in more than 100 countries.

We also note that in Ferrero's reply to question 18 of the .KINDER application it was stated that the .KINDER registry will be used for the purpose to "protect the intellectual property that Ferrero has on Kinder", "to provide a platform for the delivery of secure digital material for consumers, key stakeholders, business partners and employees", "to provide a platform able to ensure a strong global and consistent presence for the Kinder brand in the digital world across all the Ferrero Business Units" and "to contribute to the development of best practice for private brand registry operators".

It was also underlined that:

- "the registry will be rigorously controlled by authorised Ferrero personnel but it is predicted that it will also benefit [...] customers: a new .Kinder registry will benefit them because it will be a location for authentic, accessible information about the product within the Ferrero family, a transparent, reliable and trusted source of information about the product and consumer activities (e.g. promotion, communications, digital tool) that the different Kinder sub-brands will put in place";
- Ferrero wants its "customers to know that they are in a trusted and authentic destination once they arrive at the new gTLD. Above all, [Ferrero] want[s] them to be confident that they will receive accurate information and that any sensitive personal details they provide will be protected";
- ".Kinder names may not be delegated or assigned to external organizations, institutions, or individuals";
- "the .Kinder registry will be a standard registry closed to third parties and will be used only by pre validated representatives of Ferrero or selected partners. Social costs and negative consequences on customers are therefore likely to be minimised and possibly even eliminated";
- "one major goal of the .Kinder registry is the protection of consumers from confusion. In a sense, the .Kinder registry is itself a tool to eliminate or minimize that social cost because a .Kinder domain will signpost authenticity. We will control allocation of second level domains very carefully, checking to ensure that requests for domains are authentic and valid";
- "There will be no market in .Kinder domains".

Therefore, in light of our interpretation of the rationale of the Communiqué with reference to the "sensitive" categories identified therein as opposed to the characteristics of the .KINDER application summarized above, we believe that all the perfectly understandable concerns that the GAC raised in points 1-5 of the Category 1 section of Annex 1 are already duly addressed in the application for .KINDER and we thus wonder whether it could have been simply an oversight to have included also this application in such non-exhaustive list as it is the only application within the "Children" category filed by a trademark owner as a closed .Brand application.

We would very much appreciate your kind cooperation in providing us some clarification as to the above and advising us on the best way to address the matter herein in order to overcome this issue and provide the GAC with any further clarifications, declarations and reassurances deemed necessary, which Ferrero is prepared to render.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Respondent:

Applicant Name	CUNA Performance Resources, LLC
Application ID	1-1130-18309
Applied for TLD (string)	.creditunion

Response:

ANNEX I

Safeguards Applicable to all New gTLDs [page 7]

1. WHOIS verification and checks - Registry operators will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weight the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Registry operators will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar’s obligation to solicit accurate and complete information from the registrant.

Response: We agree in principle with the importance of conducting verification. However, we are concerned with the frequency of verification. In addition, we are concerned about spam filters, etc., which may make verification difficult.

2. Mitigating abusive activity - Registry operators will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We agree and support this safeguard. The .creditunion gTLD application includes language consistent with this safeguard.

3. Security checks - While respecting privacy and confidentiality, Registry operators will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Registry

GAC Advice Response Form for Applicants

operator identifies security risks that pose an actual risk of harm, Registry operator will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.

Response: We agree in principle with this safeguard. However, we believe a preferable approach is to conduct such checks passively rather than proactively.

4. Documentation - Registry operators will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Registry operators will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

Response: We commit to maintaining and making available to ICANN upon request information collected pursuant to answer 1 and answer 3 above, as collected in the ordinary course of business.

5. Making and Handling Complaints - Registry operators will ensure that there is a mechanism for making complaints to the registry operator that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

Response: We commit to ensuring such a mechanism is in place and will provide a link to it on our website.

6. Consequences - Consistent with applicable law and any related procedures, registry operators shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Response: We agree with and support this safeguard. The .creditunion gTLD application includes language consistent with this safeguard.

Category 1 - Consumer Protection, Sensitive Strings, and Regulated Markets [page 8]

1. Registry operators will include in its acceptable use policy that registrants comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), fair lending, debt collection, organic farming, disclosure of data, and financial disclosures.

Response: We agree with this safeguard and will incorporate it into the terms and conditions that registrants are required to click through.

2. Registry operators will require registrars at the time of registration to notify registrants of this requirement.

GAC Advice Response Form for Applicants

Response: We agree with this safeguard and will incorporate it into the registry/registrant agreement.

3. Registry operators will require that registrants who collect and maintain sensitive health and financial data implement reasonable and appropriate security measures commensurate with the offering of those services, as defined by applicable law and recognized industry standards.

Response: We agree with this safeguard and will require in the terms and conditions that registrants are committed to following appropriate measures and applicable law and regulation.

4. Establish a working relationship with the relevant regulatory, or industry self-regulatory, bodies, including developing a strategy to mitigate as much as possible the risks of fraudulent, and other illegal, activities.

Response: We agree with this safeguard and plan to maintain a Policy Advisory Board that will include representatives from: The World Council of Credit Unions (WOCCU), individual credit unions, state credit union leagues (associations), as well as the National Credit Union Administration (NCUA).

5. Registrants must be required by the registry operators to notify to them a single point of contact which must be kept up-to-date, for the notification of complaints or reports of registration abuse, as well as the contact details of the relevant regulatory, or industry self-regulatory, bodies in their main place of business.

Response: We agree in principle with this safeguard. See answer 7 and answer 8 below for additional detail on communication and involvement of relevant regulatory bodies.

Additional Safeguards Applicable to a Limited Subset of Strings [page 10]

6. At the time of registration, the registry operator must verify and validate the registrants' authorizations, charters, licenses and/or other related credentials for participation in that sector.

Response: We agree in principal with this safeguard. To implement this safeguard we will check the charter number for U.S. credit unions, will use all readily available online databases to verify credentials of non-U.S. credit unions, and where online/automated validation is not possible we will utilize electronic versions of paper documents.

7. In case of doubt with regard to the authenticity of licenses or credentials, Registry Operators should consult with relevant national supervisory authorities, or their equivalents.

Response: We agree with and support this safeguard.

8. The registry operator must conduct periodic post-registration checks to ensure registrants' validity and compliance with the above requirements in order to ensure they continue to conform to appropriate regulations and licensing requirements and generally conduct their activities in the interests of the consumers they serve.

GAC Advice Response Form for Applicants

Response: We support in principle this safeguard. In addition, we support the GAC's efforts generally in this area.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Hamburg Top-Level-Domain GmbH
Application ID	1-1134-57974
Applied for TLD (string)	HAMBURG

Response:

Hamburg Top-Level-Domain GmbH, the applicant for the .HAMBURG top-level domain, welcomes and supports the GAC Advice as published on April 11, 2013, as the GAC Advice has been established in the Applicant Guidebook as an instrument to reject gTLD applications which e.g. violate national laws and / or do not recognize and incorporate public interests such as consumer protection.

Hamburg Top-Level-Domain GmbH welcomes and supports the position of the GAC Advice as published on April 11, 2013, that “The GAC advises the Board that all safeguards highlighted in this document as well as any other safeguard requested by the ICANN Board and/or implemented by the new gTLD registry and registrars should:

- be implemented in a manner that is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments - including, but not limited to, the UN Universal Declaration of Human Rights.
- respect all substantive and procedural laws under the applicable jurisdictions.
- be operated in an open manner consistent with general principles of openness and non-discrimination.”

*** Community-based application for .HAMBURG by Hamburg Top-Level-Domain GmbH ***

We welcome and support the GAC Advice as published on April 11, 2013, section IV” GAC Advice to the ICANN Board”, 1.e. “Community Support for Applications”:

GAC Advice Response Form for Applicants

“The GAC advises the Board: i. that in those cases where a community, which is clearly impacted by a set of new gTLD applications in contention, has expressed a collective and clear opinion on those applications, such opinion should be duly taken into account, together with all other relevant information.”

We serve the Interests of the Community and the Public.

Our application for the string .HAMBURG is a community-based application. The .HAMBURG Community consists of multiple stakeholders from the City of Hamburg. We have been successfully working since 2006 on building a long-lasting relationship to the various stakeholders of the respective community including

1. Governmental organizations and authorities
2. Commercial and non-commercial organisations
3. Citizens

The community members have expressed a collective and clear supporting opinion on our application by supporting documents. We have consulted with all relevant public and private entities that make up the community.

*** General principles of operations for .HAMBURG by Hamburg Top-Level-Domain GmbH ***

Hamburg Top-Level-Domain GmbH would like to state, that:

1. We will respect human rights and fundamental freedoms

We fully support human rights and fundamental freedoms of mankind, this includes but is not limited to the UN declaration of rights . In this respect we would like to emphasize two principles of the UN declaration of rights:

- Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind.
- Article 19: Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

2. We will respect national laws

We require our registrars and registrants to comply with all applicable laws, including those that relate to privacy, data collection, consumer protection (including in relation to misleading and deceptive conduct), disclosure of data, and financial disclosures.”

3. We will operate the TLD in an open manner consistent with general principles of openness and non-discrimination

The fundamental goals of the Introduction of New gTLDs are:

- The new gTLD program will create a means for prospective registry operators to apply for new gTLDs, and create new options for consumers in the market.

GAC Advice Response Form for Applicants

- To foster diversity, encourage competition, and enhance the utility of the DNS.
- ICANN expects a diverse set of applications for new gTLDs, including IDNs, creating significant potential for new uses and benefit to Internet users across the globe.

We fully support these goals with the underlying principles of openness and non-discrimination and which will lead to greater choice and diversity for consumers based on competition among registries.

*** Detailed commitments by Hamburg Top-Level-Domain GmbH for .HAMBURG based on General Safeguards ***

Hamburg Top-Level-Domain GmbH will implement as already stated in the application the following safeguards in a manner that (i) is fully respectful of human rights and fundamental freedoms as enshrined in international and, as appropriate, regional declarations, conventions, treaties and other legal instruments – including, but not limited to, the UN Universal Declaration of Human Rights, (ii) respects all substantive and procedural laws under the applicable jurisdictions, and (iii) the gTLD be operated in an open manner consistent with general principles of openness and non-discrimination.

The safeguards will be subject to contractual oversight.

The Safeguards are in detail:

1. WHOIS verification and checks - Hamburg Top-Level-Domain GmbH will conduct checks on a statistically significant basis to identify registrations in its gTLD with deliberately false, inaccurate or incomplete WHOIS data at least twice a year. Registry operators will weigh the sample towards registrars with the highest percentages of deliberately false, inaccurate or incomplete records in the previous checks. Hamburg Top-Level-Domain GmbH will notify the relevant registrar of any inaccurate or incomplete records identified during the checks, triggering the registrar's obligation to solicit accurate and complete information from the registrant.
2. Mitigating abusive activity - Hamburg Top-Level-Domain GmbH will ensure that terms of use for registrants include prohibitions against the distribution of malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.
3. Security checks - While respecting privacy and confidentiality, Hamburg Top-Level-Domain GmbH will periodically conduct a technical analysis to assess whether domains in its gTLD are being used to perpetrate security threats, such as pharming, phishing, malware, and botnets. If Hamburg Top-Level-Domain GmbH identifies security risks that pose an actual risk of harm, Hamburg Top-Level-Domain GmbH will notify the relevant registrar and, if the registrar does not take immediate action, suspend the domain name until the matter is resolved.
4. Documentation - Hamburg Top-Level-Domain GmbH will maintain statistical reports that provide the number of inaccurate WHOIS records or security threats identified and actions taken as a result of its periodic WHOIS and security checks. Hamburg Top-Level-Domain GmbH

GAC Advice Response Form for Applicants

will maintain these reports for the agreed contracted period and provide them to ICANN upon request in connection with contractual obligations.

5. Making and Handling Complaints - Hamburg Top-Level-Domain GmbH will ensure that there is a mechanism for making complaints to Hamburg Top-Level-Domain GmbH that the WHOIS information is inaccurate or that the domain name registration is being used to facilitate or promote malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or otherwise engaging in activity contrary to applicable law.

6. Consequences - Consistent with applicable law and any related procedures, Hamburg Top-Level-Domain GmbH shall ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law; these consequences should include suspension of the domain name.

Hamburg Top-Level-Domain GmbH would like to note that registration policies will be setup according to this request.

However Hamburg Top-Level-Domain GmbH reserves the right to supplement the answer to the GAC Advice with additional or amended commitments based on GAC and community feedback.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1138-5993
Applied for TLD (string)	.SHOP

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points made in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns described in Section IV, Annex I, Category 2.2 – Exclusive Access for CRR’s .SHOP application.

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .SHOP

CRR notes .SHOP is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .SHOP is an open TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our open TLD model means the TLD is open to all ICANN-accredited registrars, and registration of domain names in the TLD will be open to all. Therefore, it is our belief that CRR's application for .SHOP is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .SHOP application does not fall under Category 2 - Exclusive Access safeguard advice. It is our understanding that Category 2 - Exclusive Access safeguard advice addresses GAC concerns around .SHOP applications that are limited to the exclusive use of the applicant. As described above, CRR's .SHOP application does not meet this definition. Therefore, we respectfully request that CRR's application for .SHOP not be considered a member of the GAC's list of applications subject to Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1138-33325
Applied for TLD (string)	.APP

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Government Advisory Committee (GAC) Advice and for considering the arguments put forth in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .APP application described in the below Sections of the Communique:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category
- Section IV, Annex I, Category 2.2 – Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and we also know that the GAC plays an important role within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC advice.

Purpose of the .APP TLD

CRR initially applied for the .APP TLD in order to provide a dedicated namespace for cloud offerings for its parent company, Google. On March 7, 2013, CRR submitted [Public Comments](#) responding to the Board's request for input on "Closed Generic" applications and announced that we would work to amend our application to allow third parties to register within the TLD as well. On April 6, 2013, CRR sent a [letter](#) to Christine Willett, ICANN's New gTLD Program General Manager, stating our plan to amend our .APP application from an exclusive access model to a restricted access TLD model.

CRR has stated in its new response to question 18(a), Mission/Purpose of the proposed gTLD states:

The mission of the proposed gTLD .app is to provide a dedicated domain space for application developers. The term "app," is associated with a wide variety of applications, including mobile applications, web-and browser-based applications, cloud-hosted applications and even desktop applications. Charleston Road Registry expects to uses if the gTLD will include a wide variety of uses across all of these types of applications, not limited to any specific platform or provider. The proposed gTLD will enhance consumer choice by providing new availability in the second-level domain space in which application developers can deliver new content and offerings. It also creates new layers of organization on the Internet and signals the kind of content available in the domain.

Category 1 GAC Safeguard Advice Does Not Apply to CRR's .APP Application

The GAC's Category 1 safeguard advice asks that strings that are linked to regulated or professional sectors provide additional consumer protections.

Category 1 safeguard advice suggests additional safeguards that should apply to the .APP string under the Intellectual Property Category. It is our belief that the safeguard advice the GAC has requested for this string does not apply to CRR's application for .APP as "app" is not part of a regulated or professional sector involving a level of implied trust from consumers and carrying higher levels of risk associated with consumer harm. The term "app" is a generic word that is not directly related to a specific type of regulated offering, nor is it generally associated with a specific type of content for which enhanced intellectual property safeguards would be appropriate. Further, CRR has adopted a set of safeguards, including limiting registrations to application developers, that go above and beyond safeguards required by the Applicant

Guidebook and as such, we feel that all of our TLDs will offer consumers considerable protections against abuse.

Category 2.2 - Exclusive Access Safeguard Advice Does Not Apply to CRR's .APP

CRR notes .APP is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. As noted above, our application for .APP was originally submitted to ICANN as an exclusive access TLD, but we have subsequently submitted a change request to modify the TLD to a restricted access model. Exclusive access model means the TLD is limited to the exclusive use of the applicant, whereas we intend for the TLD to be open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to those who meet registrant restriction guidelines. Therefore, it is our belief that CRR's application for .APP is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its application for .APP should not be included on the GAC's list of applications subject to either Category 1 or Category 2.2 safeguard advice. Category 1 GAC Advice is meant to address higher risk levels associated with strings linked to regulated or professional sectors. .APP is targeted at application developers, and is not linked to any regulated or professional sector nor is it related to any particular type of intellectual property that merits heightened protection. Similarly, .APP will not be operated on an exclusive-use basis so the Category 2.2 advice should not apply. Therefore, we respectfully request that CRR's application for .APP not be subject to any string-specific safeguard advice from the GAC.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1138-34539
Applied for TLD (string)	.GAME

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Government Advisory Committee (GAC) Advice and for considering the arguments put forth in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .GAME application described in the below Sections of the Communique:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property and Children Categories
- Section IV, Annex I, Category 2.2 – Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and we also know that the GAC plays an important role within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC advice.

Purpose of the .GAME TLD

CRR has stated in its response to question 18(a), Mission/Purpose of the proposed gTLD states:

The proposed gTLD will provide the marketplace with direct association to the term, "game." The mission of this gTLD, .game, is to provide a dedicated domain space in which registrants can enact second level domains that position content relating to uses of the term "game," included but not limited to board games, video games, mobile gaming applications, and sports games. Charleston Road Registry believes that registrants will find value in associating with this gTLD, which could have a vast array of purposes for enterprises, small businesses, groups or individuals seeking to associate with the term "game." Charleston Road Registry expects these uses may include but are not limited to applications such as branded second level domains (miltonbradley.games), direct links to a particular offering (wordswithfriends.game, finalfantasy.game), and sports content (bearsfootball.game).

Category 1 GAC Safeguard Advice Does Not Apply to CRR's .GAME Application

The GAC's Category 1 safeguard advice asks that strings that are linked to regulated or professional sectors provide additional consumer protections.

Category 1 safeguard advice suggests additional safeguards should apply to the .GAME string under the Intellectual Property or the Children Categories. It is our belief the safeguard advice the GAC has requested for this string does not apply to CRR's application for .GAME as "game" is not part of a regulated or professional sector involving a level of implied trust from consumers and carrying higher levels of risk associated with consumer harm. Further, we are not targeting children with the .GAME TLD. The term "game" is a generic word that is not directly related to any particular type of intellectual property nor is it solely used to relating to children. Further, CRR has adopted a set of safeguards that go above and beyond safeguards required by the Applicant Guidebook and as such, we feel that all of our TLDs will offer consumers considerable protections against abuse.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will

work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .GAME

CRR notes .GAME is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .GAME is an open TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our open TLD model means the TLD is open to all ICANN-accredited registrars, and registration of domain names in the TLD will be open to all. Therefore, it is our belief that CRR's application for .GAME is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its application for .GAME should not be included on the GAC's list of applications subject to Category 1 safeguard advice. Category 1 GAC Advice is meant to address higher risk levels associated with strings linked to regulated or professional sectors. .GAME is intended to pertain to things associated with games, such as board games, video games, mobile gaming applications, and sports games, and is not linked to any regulated or professional sector nor is it related to any particular type of intellectual property or children specifically. Therefore, we respectfully request that CRR's application for .GAME not be included on the list subject to Category 1 safeguard advice from the GAC. In addition, because our application for .GAME is an open access TLD model and not an exclusive access TLD model it is our belief that CRR's

application for .GAME is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1138-74264
Applied for TLD (string)	.DDS

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .DDS application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Health and Fitness Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .DDS

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .DDS, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .DDS string under the Corporate Identifiers category. It is our belief the safeguard advice the GAC has already addressed in our application for .DDS. The following table outlines the GAC's safeguard advice and how our .DDS application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process...".
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	CRR recognizes the importance of treating health data in a manner that is sensitive, provides for confidentiality, and is secure. CRR has committed to operating the registry with significant safeguards to protect registrant data. We comply with applicable privacy laws, and additionally work internally and with regulators and industry partners to develop and implement strong privacy standards for all of our services. Although not directly addressed in our application, will add a provision to the registration agreement requiring registrants with sensitive health data

		to implement appropriate security measures as defined by applicable law and industry standards.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	We are planning to have verification policies associated with this TLD. CRR will work with relevant regulatory bodies to establish these policies, and in some cases we expect to continue to work with these bodies as a part of the verification process.
5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .DDS and Category 2.1 Safeguard Advice for .DDS

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .DDS string.

CRR's application for .DDS is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .DDS community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .DDS. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.
- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .DDS application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1138-86970
Applied for TLD (string)	.CPA

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .CPA application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Professional Services
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access
- Section IV, Annex I, Category 2.2 - Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .CPA

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .CPA, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .CPA string under the Professional Services category. It is our belief the safeguard advice the GAC has already addressed in our application for .CPA. The following table outlines the GAC's safeguard advice and how our .CPA application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process..."
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .CPA application. The .CPA TLD targets accountants and accounting firms. We do not expect registrants of the .CPA TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	We are planning to have verification policies associated with this TLD. CRR will work with relevant regulatory bodies to establish these policies, and in some cases we expect to continue to work with these bodies as a part of the verification process.

5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."
---	--	--

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .CPA and Category 2.1 Safeguard Advice for .CPA

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .CPA string.

CRR's application for .CPA is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .CPA community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .CPA. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt

enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .CPA

CRR notes .CPA is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .CPA is a restricted access TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our restricted access model means the TLD is open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to any registrant who

meets restriction guidelines. Therefore, it is our belief that CRR's application for .CPA is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .CPA application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2.1 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. In addition, because our application for .CPA is a restricted access TLD model and not an exclusive access TLD model it is our belief that CRR's application for .CPA is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1138-87772
Applied for TLD (string)	.FILM

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .FILM application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .FILM

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .FILM, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .FILM string under the Intellectual Property category. It is our belief the safeguard advice the GAC has already addressed in our application for .FILM. The following table outlines the GAC's safeguard advice and how our .FILM application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process...".
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .FILM application. The .FILM TLD targets content or offerings related to the promotion or screening of films, many of which would presumably register the film name as the second level domain name. We do not expect registrants of the .FILM TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	CRR will also work with the appropriate industry associations to mitigate the risk of illegal activity.

5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .FILM and Category 2.1 Safeguard Advice for .FILM

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .FILM string.

CRR's application for .FILM is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .FILM community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in

order to register a second-level domain in .FILM. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.
- *Entertainment-Specific Protections:* In addition to the enhanced protections that we will offer for all of CRR's new gTLD registries, certain "entertainment-targeting" registries will require registrars to include language in their registrar-registrant agreement that the registrant must be authorized or licensed to post any copyrighted content.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .FILM application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1139-2965
Applied for TLD (string)	.MED

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .MED application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Health and Fitness Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .MED

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .MED, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .MED string under the Corporate Identifiers category. It is our belief the safeguard advice the GAC has already addressed in our application for .MED. The following table outlines the GAC's safeguard advice and how our .MED application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process...".
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	CRR recognizes the importance of treating health data in a manner that is sensitive, provides for confidentiality, and is secure. CRR has committed to operating the registry with significant safeguards to protect registrant data. We comply with applicable privacy laws, and additionally work internally and with regulators and industry partners to develop and implement strong privacy standards for all of our services. Although not directly addressed in our application, will add a provision to the registration agreement requiring registrants with sensitive health data

		to implement appropriate security measures as defined by applicable law and industry standards.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	We are planning to have verification policies associated with this TLD. CRR will work with relevant regulatory bodies to establish these policies, and in some cases we expect to continue to work with these bodies as a part of the verification process.
5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .MED and Category 2.1 Safeguard Advice for .MED

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .MED string.

CRR's application for .MED is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .MED community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .MED. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.
- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .MED application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1139-21220
Applied for TLD (string)	.CORP

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .CORP application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Corporate Identifiers Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .CORP

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .CORP, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .CORP string under the Corporate Identifiers category. It is our belief the safeguard advice the GAC has is already addressed in our application for .CORP. The following table outlines the GAC's safeguard advice and how our .CORP application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process..."
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .CORP application. The .CORP TLD will be targeted as a substitute gTLD for .COM. We do not expect registrants of the .CORP TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	We are planning to have verification policies associated with this TLD. CRR will work with relevant regulatory bodies to establish these policies, and in some cases we expect to continue to work with these bodies as a part of the verification process.

5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."
---	--	--

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .CORP and Category 2.1 Safeguard Advice for .CORP

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .CORP string.

CRR's application for .CORP is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .CORP community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .CORP. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt

enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .CORP application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1140-20623
Applied for TLD (string)	.EARTH

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Government Advisory Committee (GAC) Advice and for considering the arguments put forth in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .EARTH application described in the below Sections of the Communique:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Environmental Category

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and we also know that the GAC plays an important role within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC advice.

Purpose of the .EARTH TLD

CRR has stated in its response to question 18(a), Mission/Purpose of the proposed gTLD states:

The proposed gTLD will provide the marketplace with direct association to the term, "earth." The mission of this gTLD, .earth, is to provide a dedicated domain space in which registrants can enact second-level domains that extend the amount of information available on the Internet about Earth, specific locations, the environment and other "green" topics, the ecosystem, and/or the solar system. This mission will enhance consumer choice by providing new availability in the second-level domain space, creating new layers of organization on the Internet, and signaling the kind of content available in the domain. Charleston Road Registry believes that registrants will find value in associating with this gTLD, which could have a vast array of meanings and purposes. Charleston Road Registry expects these uses may include but are not limited to applications such as recycle.earth, ViewFromSpace.earth, or HelpThe.earth.

Category 1 GAC Safeguard Advice Does Not Apply to CRR's .EARTH Application

The GAC's Category 1 safeguard advice asks that strings that are linked to regulated or professional sectors provide additional consumer protections.

Category 1 safeguard advice suggests additional safeguards should apply to the .EARTH string under the Environmental Category. It is our belief the safeguard advice the GAC has requested for this string does not apply to CRR's application for .EARTH as "earth" is not part of a regulated or professional sector involving a level of implied trust from consumers and carrying higher levels of risk associated with consumer harm. The term "earth" is a generic word that is not directly related to a specific type of environmental safeguards. Further, CRR has adopted a set of safeguards that go above and beyond safeguards required by the Applicant Guidebook and as such, we feel that all of our TLDs will offer consumers considerable protections against abuse.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that

CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its application for .EARTH should not be included on the GAC's list of applications subject to Category 1 safeguard advice. Category 1 GAC Advice is meant to address higher risk levels associated with strings linked to regulated or professional sectors. .EARTH targets information about the Earth, specific locations, the environment and other "green" topics, the ecosystem, and/or the solar system, and is not linked to any regulated or professional sector nor is it related to any particular type of intellectual property. Therefore, we respectfully request that CRR's application for .EARTH not be included on the list subject to Category 1 safeguard advice from the GAC.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1140-55599
Applied for TLD (string)	.MOVIE

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .MOVIE application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access
- Section IV, Annex I, Category 2.2 – Exclusive Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .MOVIE

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .MOVIE, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .MOVIE string under the Intellectual Property category. It is our belief the safeguard advice the GAC has is already addressed in our application for .MOVIE. The following table outlines the GAC's safeguard advice and how our .MOVIE application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process..."
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .MOVIE application. The .MOVIE TLD targets the screening of movies, many of which would presumably register the movie name as the second level domain name. We do not expect registrants of the .MOVIE TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	CRR will also work with the appropriate industry associations to mitigate the risk of illegal activity.

5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."
---	--	--

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .MOVIE and Category 2.1 Safeguard Advice for .MOVIE

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .MOVIE string.

CRR's application for .MOVIE is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .MOVIE community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .MOVIE. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt

enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.
- *Entertainment-Specific Protections:* In addition to the enhanced protections that we will offer for all of CRR's new gTLD registries, certain "entertainment-targeting" registries will require registrars to include language in their registrar-registrant agreement that the registrant must be authorized or licensed to post any copyrighted content.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .MOVIE

CRR notes .MOVIE is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .MOVIE is a restricted access TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our restricted access model means the TLD is open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to any registrant who meets restriction guidelines. Therefore, it is our belief that CRR's application for .MOVIE is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .MOVIE application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program. In addition, because our application for .MOVIE is a restricted access TLD model and not an exclusive access TLD model it is our belief that CRR's application for .MOVIE is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communique](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1141-1851
Applied for TLD (string)	.FREE

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Government Advisory Committee (GAC) Advice and for considering the arguments put forth in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .FREE application described in the below Sections of the Communique:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Intellectual Property Category

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and we also know that the GAC plays an important role within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC advice.

Purpose of the .FREE TLD

CRR has stated in its response to question 18(a), Mission/Purpose of the proposed gTLD states:

The proposed gTLD will provide the marketplace with direct association to the term "free." "Free" has a variety of definitions, and Charleston Road Registry does not intend to restrict the use of the gTLD; however, Charleston Road Registry believes that the use of the term meaning "with no cost" will be the primary source of registrant demand. The mission of this gTLD, .free, is to provide a dedicated domain space in which registrants can enact second level domains that position content or information as or relating to "free." This mission will enhance consumer choice by providing new availability in the second level domain space, creating new layers of organization on the Internet, and signaling the kind of content available in the domain. Charleston Road Registry believes that registrants will find value in associating with this gTLD, which has significant promotional appeal for enterprises, small businesses, groups or individuals seeking to associate with the term "free." Charleston Road Registry expects these uses may include but are not limited to applications such as marketing campaigns (juice.free), promotion of free events (events.free) or free activities in a given location (nyc.free).

Category 1 GAC Safeguard Advice Does Not Apply to CRR's .FREE Application

The GAC's Category 1 safeguard advice asks that strings that are linked to regulated or professional sectors provide additional consumer protections.

Category 1 safeguard advice suggests additional safeguards should apply to the .FREE string under the Intellectual Property Category. It is our belief the safeguard advice the GAC has requested for this string does not apply to CRR's application for .FREE as "free" is not part of a regulated or professional sector involving a level of implied trust from consumers and carrying higher levels of risk associated with consumer harm. The term "free" is a generic word that is not directly related to any particular type of intellectual property. Further, CRR has adopted a set of safeguards that go above and beyond safeguards required by the Applicant Guidebook and as such, we feel that all of our TLDs will offer consumers considerable protections against abuse.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will

work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its application for .FREE should not be included on the GAC's list of applications subject to Category 1 safeguard advice. Category 1 GAC Advice is meant to address higher risk levels associated with strings linked to regulated or professional sectors. .FREE targets marketing campaigns (juice.free), promotion of free events (events.free), or free activities in a given location (nyc.free), and is not linked to any regulated or professional sector nor is it related to any particular type of intellectual property. Therefore, we respectfully request that CRR's application for .FREE not be included on the list subject to Category 1 safeguard advice from the GAC.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1141-50966
Applied for TLD (string)	.SEARCH

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points made in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns described in Section IV, Annex I, Category 2.2 – Exclusive Access for CRR’s .SEARCH application.

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .SEARCH

CRR notes .SEARCH is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .SEARCH was originally submitted to ICANN as an exclusive access TLD. On March 7, 2013 CRR submitted [Public Comments](#) responding to the Board's request for input on "Closed Generic" applications. On page seven of our public comments, we acknowledge the concerns around "closed-generics" and state: "we intend to work with ICANN, the Government Advisory Committee (GAC), and other members of the relevant communities to amend our applications" to address these concerns. Further, on April 6, 2013, CRR sent a [letter](#) to Christine Willett, ICANN's New gTLD Program General Manager, including our change request for .SEARCH, which modifies the application from an exclusive access model to a restricted access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant, whereas our restricted access model means the TLD is open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to those who meet registrant restriction guidelines. Therefore, it is our belief that CRR's application for .SEARCH is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .SEARCH application does not fall under Category 2 - Exclusive Access safeguard advice. It is our understanding that Category 2 - Exclusive Access safeguard advice addresses GAC concerns around .SEARCH applications that are limited to the exclusive use of the applicant. As described above, CRR's .SEARCH application does not meet this definition. Therefore, we respectfully request that CRR's application for .SEARCH not be considered a member of the GAC's list of applications subject to Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry Inc.
Applicant ID	1-1141-82929
Applied for TLD (string)	.MAIL

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points made in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns described in Section IV, Annex I, Category 2.2 – Exclusive Access for CRR’s .MAIL application.

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 2.2 - Exclusive Access Safeguard Advice for .MAIL

CRR notes .MAIL is a listed string under the GAC's Category 2.2 Exclusive Access safeguard advice. Our application for .MAIL is a restricted access TLD model and not an exclusive access TLD model. Exclusive access model means the TLD is limited to the exclusive use of the applicant whereas our restricted access model means the TLD is open to all ICANN-accredited registrars, and registration of a domain name in the TLD will be open to anyone using the domain for a specific type of service/content. Therefore, it is our belief that CRR's application for .MAIL is not a member of the GAC's Category 2 - Exclusive Access safeguard advice.

Conclusion

CRR believes its .MAIL application does not fall under Category 2 - Exclusive Access safeguard advice. It is our understanding that Category 2 - Exclusive Access safeguard advice addresses GAC concerns around .MAIL applications that are limited to the exclusive use of the applicant. As described above, CRR's .MAIL application does not meet this definition. Therefore, we respectfully request that CRR's application for .MAIL not be considered a member of the GAC's list of applications subject to Category 2 - Exclusive Access safeguard advice.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1141-94472
Applied for TLD (string)	.KID

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .KID application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Children Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .KID

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .KID, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .KID string under the Children category. It is our belief the safeguard advice the GAC has is already addressed in our application for .KID. The following table outlines the GAC's safeguard advice and how our .KID application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process...".
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .KID application. The .KID TLD promotes only verified kid-friendly content. We do not expect registrants of the .KID TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	The .KID TLD is intended to provide child-friendly content. CRR's parent, Google, works closely with a range of government, self-regulatory, and non-governmental child safety experts to help protect younger users and their families as they come online. CRR

		will work with Google and those bodies to establish policies that will provide for a child-friendly environment within the TLD.
5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .KID and Category 2.1 Safeguard Advice for .KID

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .KID string.

CRR's application for .KID is a "restricted TLD model". The TLD will be restricted to child-friendly content. Specifically:

- *Registration Process:* Registration and content criteria will be designed to protect the .KID community and limit registrations to those providing kid-friendly content.

- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a provider of kid-friendly content in order to register a second-level domain in .KID. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.
- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .KID application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC ADVICE RESPONSE FORM FOR APPLICANTS

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding new gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

RESPONDENT:

Applicant Name	Charleston Road Registry
Applicant ID	1-1142-52922
Applied for TLD (string)	.LLP

RESPONSE:

Introduction

We thank the ICANN Board for the opportunity to respond to the Governmental Advisory Committee (GAC) Advice and for considering the points offered in this response. In all, Charleston Road Registry, Inc. (CRR) received advice on 31 of its applied-for strings. This response specifically addresses concerns with CRR’s .LLP application described in the below Sections of the Communiqué:

- Section IV, Annex I, Category 1 - Consumer Protection, Sensitive Strings and Regulated Markets: Corporate Identifiers Category
- Section IV, Annex I, Category 1.1 - GAC’s Further Advice
- Section IV, Annex I, Category 2.1 - Restricted Access

We also thank the GAC for the time and effort we know must have gone into the preparation, drafting and issuance of its advice. We recognize the difficult work the GAC undertakes and appreciate the important role the GAC plays within the multi-stakeholder process. We were happy to see the GAC reach consensus on many important issues.

CRR has always been and remains very committed to the security and stability of the domain name system as well as the success of the new generic top-level domain (gTLD) program and it is in that spirit that we submit the following response to the GAC Advice.

CRR's Response to Category 1 GAC Safeguard Advice for .LLP

CRR's underlying new gTLD business philosophy is that all of our registries operate in a way that is consistent with applicable laws. As stated in our application for .LLP, our mission is to help make information universally accessible and useful by extending the utility of the DNS while enhancing the performance, security, and stability of the Internet for users worldwide.

Category 1 safeguard advice suggests the following safeguards should apply to the .LLP string under the Corporate Identifiers category. It is our belief the safeguard advice the GAC has already addressed in our application for .LLP. The following table outlines the GAC's safeguard advice and how our .LLP application addresses it.

#	Safeguard Advice	CRR Response
1	Registry's acceptable use policy will require registrants to comply with all applicable laws.	CRR's response to question 28.3, Abuse Policy Rights Reserved, of the Applicant Guidebook explicitly states: "CRR reserves the right to deny, cancel... any domain name....it deems necessary...to comply with any applicable laws, government rules or requirements, requests of law enforcement, or any dispute resolution process..."
2	Registry will require registrars to notify registrants of the above requirement.	CRR will include a provision in its Registry-Registrar Agreement requiring all registrars to notify registrants of this requirement.
3	Registry will require registrants with sensitive health and financial data to implement appropriate security measures as defined by applicable law and industry standards.	This advice is not applicable to our .LLP application. The .LLP TLD targets limited liability partnerships. We do not expect registrants of the .LLP TLD to have commercial access to sensitive health and/or financial data.
4	Registry will form relationships with relevant regulatory or self-regulatory bodies to mitigate the risk of illegal activity.	We are planning to have verification policies associated with this TLD. CRR will work with relevant regulatory bodies to establish these policies, and in some cases we expect to continue to work with these bodies as a part of the verification process.

5	Registry will require registrants to provide a current point of contact for the reporting of registration abuse, and the contact details for their industry regulatory or self-regulatory authority.	During the registration process, registrants are already required to provide both administrative and technical contacts, and registrants have an ongoing obligation to keep this information current. CRR intends to treat the administrative contact as the point of contact for reporting registration abuse. Additionally, CRR has also taken steps to mitigate issues arising from flawed registrant contact details. CRR's response to question 28.8, Abuse Prevention, of the Applicant Guidebook explicitly states: "CRR will authenticate registrant information by providing an email verification link sent to the registrant to confirm its email address. In addition, we will ensure an ongoing ability to contact the registrant via email by confirming the new email address as part of changes affecting the contact information." ~and~ "CRR plans to regularly monitor registration data for accuracy and completeness, employing authentication methods, and establishing policies and procedures to address domain names with inaccurate or incomplete WHOIS data."
---	--	--

CRR's Response to Category 1.1 GAC's Further Safeguard Advice for .LLP and Category 2.1 Safeguard Advice for .LLP

Apart from the safeguards CRR has outlined above in order to address the GAC's specific safeguard advice for Category 1 strings, we also want to point out specific safeguards we have built into our application for the .LLP string.

CRR's application for .LLP is a "restricted access TLD model". Restricted access TLD model means we have committed to enhanced levels of protection and eligibility verification as part of the registration process for this TLD. Specifically:

- *Registration Process:* Registration criteria will be designed to protect the .LLP community.
- *Eligibility Verification Process:* At the time of registration, registrars will be required to verify that each potential registrant is in fact a member of the applied-for community in order to register a second-level domain in .LLP. Additionally, CRR reserves the right to adopt certain monitoring measures, including periodic audits, and the right to adopt

enforcement measures, including a request that registrars facilitate a user reporting method to log complaints and/or potential instances of misuse within the gTLD.

- *Rights Protection Mechanisms:* As set forth below in our discussion of additional safeguards, CRR is committed to implementing strong and integrated intellectual property rights protection mechanisms which build upon ICANN's required policies while encouraging innovation, competition, and choice on the Internet.

Additional Safeguards Provided for All CRR Applications

Finally, as part of our commitment to improving the Internet ecosystem through the new gTLD program, CRR seeks to mitigate the problem of abusive registrations and uses of domain names. We recognize that such abuses create security and stability issues for the registry, registrars, and registrants, as well as for users of the Internet in general. Accordingly, CRR will work hand-in-hand with our parent company, Google Inc., to provide a secure Internet space for all of our new gTLD registries, where harmful practices such as phishing, malware, spamming, pharming, and child pornography are not tolerated. Our robust abuse policy will ensure that CRR has the authority to suspend, cancel, or transfer domain names that violate such prohibitions.

In addition, we have worked with the community to develop additional intellectual property rights protection mechanisms that build upon ICANN's requirements, stipulated in the Applicant Guidebook, but still allow for ample competition and choice on the Internet. In addition to the carefully negotiated requirements mandated by ICANN, CRR has committed to double the length of the mandatory Sunrise Period from 30 days to 60 days and to extend the Trademark Claims Service indefinitely for all of our open registries. The recent expansion of the Claims Service that allows up to 50 previously abused strings per Trademark Clearinghouse submission to be included, coupled with our indefinite Claims Service significantly reduce rights holders' burdens by reducing monitoring costs and deterring potential cybersquatters. CRR's commitment to engage in pre-registration verification of potential domain name registrants should further serve to reduce fraudulent practices and to facilitate better communication between the parties to a dispute.

We believe that such measures provide strong safeguards against potential abuse across CRR's registries, and we will continue to maintain an open dialogue with the community as we work on drafting and implementing our policies.

Conclusion

CRR believes its .LLP application aptly addresses the GAC's concerns articulated in its Category 1 and Category 2 GAC safeguard advice and should be permitted to continue through the new gTLD implementation process. We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

We would like to thank the Board for its consideration of our response, and we look forward to continuing the dialogue with the Board, the GAC and the ICANN community regarding the new gTLD program.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Monash University
Application ID	1-1153-75618
Applied for TLD (string)	.monash

Response:

Dear Sir/Madam,

Applicant Comments on the Beijing GAC Communiqué

This letter is submitted in response to the Governmental Advisory Committee (GAC) Communiqué issued on 11 April 2013 (the “Beijing Advice”) and focuses specifically on the publication of the “Safeguards Applicable to all New gTLD’s” (the “Safeguards”) as contained in Annex 1 of the Beijing Advice.

We are disappointed and concerned that the GAC has chosen to step beyond its agreed remit and issue the broad, generic Beijing Advice covering all new gTLD applicants. Module 3 of the Applicant Guidebook, states that “the process for GAC Advice for New gTLDs is intended to address applications that are identified by governments to be problematic, e.g., that potentially violate national law or raise sensitivities.” We believe the provision of the Beijing Advice covering all new gTLD applications represents a material change to the scope and purpose of the Advice which was to have been provided. We see no reason why the Beijing Advice was not confined to targeting specific applications as originally (and reasonably) expected.

We, and no doubt others, are understandably aggrieved at the continued shifting landscape, one which is quite outside the conditions under which our application was submitted. That being the case, we are faced with a choice between a lesser of two evils. The new gTLD program has been subject to repeated and substantial delays and the present issue threatens to add further delay by at least a further 3-6 months were the Beijing Advice to be rejected in whole or in part.

To avoid delay, we have no option but to agree to the Safeguards in part as further described below. However, we would flag that such agreement and response is made under protest.

Safeguards:

Provided below is further detail on the particular Safeguards and our anticipated adherence or otherwise.

1. WHOIS verification and checks

Any requests from the GAC for additional safeguards regarding WHOIS should be addressed by the Board through the work being undertaken by the Expert Working Group on gTLD Directory Services. As this work will ultimately feed into a Board-initiated GNSO Policy Development Process (PDP) to serve as a foundation for the GNSO's creation of new consensus policies and requisite contract changes, this is the more appropriate mechanism for addressing the GAC on this issue. We do not consider it appropriate for this GAC request to be acceded to while policy work on this very sensitive issue is currently underway and nor for the outcome to be enforced on successful new gTLD applicants through the Registry Agreement.

We would also note that the rationale underpinning this Safeguard is already adequately addressed by the WHOIS Accuracy Program Specification appended to the new Registrar Accreditation Agreement (RAA) that all Registrars are required to execute prior to selling any new gTLDs. This specification requires detailed verification and checking of WHOIS data, making the Safeguard redundant. On this basis, we do not propose to agree to the application of such in relation to our TLD.

2. Mitigating abusive activity

We agree to the application of such to our TLD.

3. Security Checks

We cannot agree to this Safeguard. Registry Operators are not, and never have been charged with policing the internet, nor should they be.

In addition, Registry Operators do not have the expertise to carry out the requested "technical analysis". Indeed, only a handful of expert companies globally might have such expertise and the cost of employing such would be prohibitive and again beyond the bounds by which our gTLD Application was submitted.

Quite apart from the above, the wording of the Safeguard is so wide and loose and subjective that it would impose an unduly onerous obligation of uncertain scope and is therefore completely unacceptable.

4. Documentation

In view of the comments above concerning Safeguards 1 and 3, this Safeguard is redundant.

5. Making and Handling Complaints

GAC Advice Response Form for Applicants

As a Registry Operator, we are already required under the terms of the RA to maintain a point of contact as stipulated in order to receive complaints of the type indicated.

We are willing to agree to the application of this Safeguard to our TLD on the basis that it is acknowledged that the bar of complaint “handling” is met by our referring such to the appropriate authorities or third party arbiters.

6. Consequences

We agree to the application of such to our TLD.

Registry Agreement

In light of the above, the key question to be considered is how the Safeguards might be incorporated into the RA. At all costs, we must avoid any further delay, including another round of public comments on the inclusion of new text in the RA.

We have considered at length how to achieve such and would respectfully submit that consideration be given to the utilisation of the Public Interest Specification at Appendix 11 of the RA.

Whilst to do so risks the potential for frivolous third party complaints regarding such, it would afford us the opportunity to agree to those Safeguards we are able to and which are not covered elsewhere, whilst avoiding a further round of public comments and the attendant delay.

If ICANN were so minded, we would be willing to consider wording of the following order:-
“Registry Operator will adhere to the following “Safeguards Applicable to all New gTLD’s” as defined by the Governmental Advisory Committee in Annex 1 to its communique dated 11 April 2013:-

- Safeguard 2
- Safeguard 5
- Safeguard 6”

Having explained above that Safeguards 1 and 4 are redundant, this means that adherence only to Safeguard 3 is not agreed on the basis of what we consider to be the eminently reasonable arguments above.

We trust that the above middle ground will be acceptable to you and once again respectfully request that it is paramount in this instance to avoid further delay.

Yours faithfully

Monash University

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Johnson & Johnson Services, Inc.
Application ID	1-1156-50969
Applied for TLD (string)	.BABY

Response:

In response to the Governmental Advisory Committee’s (GAC) Beijing Communiqué, dated 11 April 2013, Johnson & Johnson Services, Inc. ("JJSI") would like to affirm to our commitment to operating the .BABY gTLD in a manner that reflects our longstanding history of corporate responsibility.

For over 100 years, Johnson & Johnson has dedicated itself to understanding babies and their needs, in order to provide mothers and fathers with safe products, as well as baby-related health and wellness information. Consumers have come to depend on the products, services, and educational information provided by Johnson & Johnson and, in particular, its baby-care divisions. Johnson & Johnson has significant experience creating rich information and educational content relating to baby health and wellness on well-regarded web sites, such as BabyCenter.com and JohnsonsBaby.com, among others.

The values that guide the Johnson & Johnson business operations and decision-making are outlined in the company’s Credo, found at <http://www.jnj.com/connect/about-jnj/jnj-credo>. Simply put, our Credo challenges the company to put the public interest and the well-being of the people we serve first. Johnson & Johnson has a long-standing value-based history, and it is these values that will guide our operation of the .BABY top-level domain, should it be awarded to us.

In line with our Credo values, Johnson & Johnson Services, Inc. plans to operate the .BABY gTLD with the aim of serving as a trusted, hierarchical, and intuitive namespace provided by Johnson & Johnson and its qualified subsidiaries and affiliates. Consumers, healthcare professionals, and retailers will have access to authoritative and verified baby-related health, wellness, and skincare information, educational content and safe products. JJSI will operate .BABY as a closed registry to ensure that all operations within the gTLD will be conducted in line with a strict code of conduct that includes prohibitions against:

GAC Advice Response Form for Applicants

- Counterfeiting, piracy, and other forms of intellectual property theft;
- Phishing or other forms of online fraud;
- The distribution of malware or operation of botnets; and
- The provision of incomplete or inaccurate WHOIS information.

In doing so, Johnson & Johnson aims to create a safe online space for consumers, professionals, parents, and their babies.

The GAC advises that “for strings representing generic terms, exclusive registry access should serve a public interest goal” and we believe that the company’s history and experience, enable and motivate our companies to serve that interest as we have always aimed to do. We hope this addresses any concerns that the Board might have; however, we invite further dialogue with the Board if it has any remaining questions regarding Johnson & Johnson Services, Inc.’s .BABY application.

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	American Council of Life Insurers
Application ID	1-1160-79590
Applied for TLD (string)	.LIFEINSURANCE

Response:

American Council of Life Insurers (“ACLI”) is a Washington, D.C.-based trade association representing an industry with more than 200 years of experience providing financial security to families, workers, and businesses. With more than 300 legal reserve life insurer and fraternal benefit society member companies operating in the United States, ACLI members represent more than 90% of the assets and premiums of the life insurance and annuity industry. In addition, ACLI member companies offer pensions, 401(k) and other retirement plans, long-term care and disability income insurance, and reinsurance. Our members’ products help protect 75 million American families against economic uncertainty – providing peace of mind, long-term savings, and a guarantee of lifetime income when it is time to retire.

ACLI advocates the shared interests of our member companies and their policyholders before state, federal, and international legislators and regulators. By promoting sound public policy on issues important to the life insurance industry, such as financial services reform, retirement security, and taxes, ACLI aims to protect both our members and their customers. (1)

ACLI would like to affirm to the ICANN Board our commitment to operating the .LIFEINSURANCE gTLD in a manner that reflects our longstanding commitment and history of advocating for families that rely on life insurers’ products for financial and retirement security in federal, state, and international forums for public policy.

In line with the core mission of supporting the industry marketplace and the 75 million American families that rely on life insurers’ products for financial and retirement security, ACLI intends to operate the .LIFEINSURANCE gTLD as a trusted, hierarchical, and intuitive namespace for a self-defined community of organizations. In doing so, ACLI can ensure that all operations within the gTLD will be conducted in line with a strict code of conduct that includes prohibitions against:

- Counterfeiting, piracy, and other forms of intellectual property theft,
- Phishing or other forms of online fraud,

GAC Advice Response Form for Applicants

- The distribution of malware or operation of botnets, and
- The provision of incomplete or inaccurate WHOIS information.

In addition, ACLI plans to implement a restricted registration model, wherein registration is limited to ACLI members in good standing with policies set forth in our charter. By using a controlled registration policy, ACLI aims to create a safe online space for consumers and insurance providers, free from many of the risks associated with conducting business and research online. The public will benefit from the existence of a safe space to provide and exchange authoritative information regarding life insurance products, and potentially annuities, pensions, 401(k)'s, and other retirement plans, long-term care, disability income insurance, and reinsurance. Additionally, a restricted registration policy will help to ensure that any financial data collected in .LIFEINSURANCE is done in accordance with online privacy and security standards.

The Governmental Advisory Committee's Beijing Communiqué identifies the "Financial" sector, including .LIFEINSURANCE, as a regulated sector to which additional safeguards should apply and advises that "for strings representing generic terms, exclusive registry access should serve a public interest goal." We hope this quells any concerns that the Board might have in association with the .LIFEINSURANCE gTLD.

We invite further dialogue with the Board if it has any remaining concerns regarding ACLI's .LIFEINSURANCE application.

(1) For instance, ACLI has worked across the United States to enact legislation to deter abusive stranger-originated life insurance (STOLI), and other activities that may expose policyholders to increased risk of fraud. See more information:
<<http://www.acli.com/Issues/Pages/Default.aspx>>

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	Total SA
Application ID	1-1162-21667
Applied for TLD (string)	total

Response:

Dear,

We refer to the Governmental Advisory Committee’s (GAC) Communiqué published on April 11, 2013, and in particular Annex I thereof.

Please note that we are in full agreement with the points raised by the GAC in relation to registries of future generic top-level domains implementing the six safeguards referred to in the above mentioned Annex I, being:

1. WHOIS verification and checks: considering the fact that the registry for the applied-for gTLD will – at least initially – operate a single registrant-top-level domain, we will ensure at all times the accuracy of publicly available WHOIS information. If and when our domain name registration policy would change, we will implement processes and procedures in order to provide for checking mechanisms in line with what is proposed by the GAC;
2. Mitigating abusive activity: considering the fact that the proposed registry will – at least initially – be a single registrant-TLD, where any and all services provided under domain names in the TLD will be under the control of the registry, the risks of abusive activity should be non-existing. If and when our domain name policy would change, we will implement the safeguards requested by the GAC and implement processes in order to (i) mitigate abusive conduct from happening, and (ii) promptly implementing appropriate safeguards in the event abusive activity would be detected;
3. Security checks: we will implement policies, processes and procedures in order to avoid the security threats referred to in Annex I to the GAC Communiqué, in particular in relation to phishing, pharming, malware and botnets, and will conduct regular security checks in relation to domain names registered by or on behalf of the registry, as well as by third parties in the event

GAC Advice Response Form for Applicants

we will allow non-affiliated parties of the applicant to register domain names and/or render services under such domain names. Nonetheless, proactively carrying out these types of security checks is most likely something that will require further technical specification to be defined by ICANN in accordance with its policy development processes;

4. Documentation: we will comply in full with the proposed documentation requirements put forward by the GAC in relation to maintaining reports concerning (i) the number of inaccurate WHOIS records, (ii) security threats identified, and (iii) actions taken. These reports will be kept for the full term of the registry agreement with ICANN;

5. Making and handling complaints: as stated in our application, we will put in place a complaints point of contact that will deal with complaints relating to malware, operation of botnets, phishing, piracy, trademark or copyright infringement, fraudulent or deceptive practices, counterfeiting or any type of behaviour that is considered to be contrary to applicable law.

6. Consequences: we will ensure that there are real and immediate consequences for the demonstrated provision of false WHOIS information and violations of the requirement that the domain name should not be used in breach of applicable law, which will be laid down in the domain name registrations that will be published following the delegation of the TLD to us.

Furthermore, we refer to our responses to Questions 18, 20, 28 and 29, as amended following the responses to the clarifying questions we have submitted and/or will supplement if needed be. However, we reserve the right to amend our responses following the outcome of the current policy development and comments processes in relation to the GAC Advice contained in the GAC Communiqué referred to above.

Respectfully submitted,

The Government Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD Applications. Please see Section IV, Annex I, and Annex II of the GAC Beijing communique for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your CSC Portal with the subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 on 10-May-2013.

Respondent:

Applicant Name	DotConnectAfrica Trust (DCA Trust)
Applicant ID	1-1165-42560
Applied for TLD (string)	.Africa

Response:

Subject: 1-1165-42560 Response to GAC Advice

General Introduction & Summary

This GAC Advice Response has been prepared in response to the GAC Advice Objection notice conveyed in the ICANN GAC Beijing Communique which contains the following statement:

"i. The GAC Advises the ICANN Board that:

i. The GAC has reached consensus on GAC Objection Advice according to Module 3.1 part I of the Applicant Guidebook on the following applications:

1. The application for .africa (Application number 1-1165-42560)"¹

Therefore, as the applicant for the .Africa gTLD with Application ID. No. 1-1165-42560, DotConnectAfrica Trust wishes to respond to this specific GAC Objection Advice against its application that has been officially notified to the ICANN Board and widely disseminated to the ICANN Global Community.²

¹ See Section IV ('GAC Advice to the ICANN Board') on page 3 of GAC Beijing Communiqué available at <https://gacweb.icann.org/display/gacweb/Governmental+Advisory+Committee>

We begin by expressing our great **disappointment and outrage** with the decision of the ICANN GAC to issue a GAC Objection Advice against our application for the .Africa new gTLD. **We totally disagree with it, and would like to repudiate and reject it in the strongest possible terms.** From the outset, we would like to urge the esteemed Board of Directors of the Internet Corporation for Assigned Names and Numbers not to accept this iniquitous, tendentious and inequitable GAC Objection Advice, and to completely distance themselves from it. We implore the ICANN Board to employ the existing provisions within the new gTLD Guidebook not to accept the GAC Objection Advice under any circumstances. We believe that our application should be allowed to proceed under the general terms of the structured new gTLD program that is being implemented by ICANN, and would strongly insist that the GAC Objection Advice against our application should not be followed by the ICANN Board.

We hereby seek the immediate **protection of the ICANN Board** against an overwhelming **force**, that is **hellbent on frustrating, and prematurely terminating**, our new gTLD aspirations; and hope that the Board of ICANN will be kind and considerate enough to use its discretionary powers to provide the type of unique protection that we are presently requesting.

Part A

Why DCA Trust Disagrees with the GAC Objection Advice

Before going into the specific details of our Reponse, we wish to explain the fundamentals that underpin our profound disagreement with the GAC Objection Advice that has been devised against our .Africa new gTLD application by the ICANN GAC.

We had anticipated that in the absence of any valid objections filed against DCA's application either on the basis of; String Confusion, Legal Rights, Community or Limited Public Interest Objection;³ that a high-handed GAC Policy Advice will be contrived and used autocratically to influence the ICANN Board to act against DCA's application; and by so doing, **turn the battle for .Africa new gTLD in favour of Uniform ZA Central Registry**, the other competing applicant in the same exact matching string contention set for .Africa new gTLD. Against the backdrop that UniForum had openly advocated, as evidenced in written comments conveyed to the Independent Objector of the ICANN new gTLD Program⁴, urging the Independent Objector to file an Objection against DCA's application, and a GAC advice has now been issued against DCA's application, thereby assisting UniForum to achieve their wanton objectives and desires against DCA. What reassurances do we have that UniForum did not have a hand in this GAC Objection Advice against DCA's application?

² See for example <http://newgtlds.icann.org/en/program-status/correspondence>

³ All objections that have been filed with the various international dispute resolution providers may be found at <http://newgtlds.icann.org/en/program-status/odr>

⁴ UniForum's comments to the Independent Objector to the ICANN new gTLD Program may be found at <http://www.independent-objector-newgtlds.org/app/download/8743939/UniForum+SA+Response+to+the+IO.pdf>

If our estimation is indeed correct that a Machiavellian effort has been actually orchestrated against our application, where is the justice in allowing such invidiousness to prevail within an open, transparent and competitive new gTLD program? Thus, we have no need to over-emphasize that such actions that are entirely of a contrived nature should not be allowed by the ICANN Board within the circumscribed civilized space of a globally approved new gTLD program.

Therefore, we expressly disagree with the work of the ICANN GAC in this matter.

Even though a GAC Early Warning was issued, and DCA Trust had submitted a detailed response, we believe that the ICANN GAC did not do its work properly. For example, we had asked for full accountability and disclosures regarding the AUC RFP Process⁵, but this was ignored as if our remonstrations are of no consequence. What is the point in asking us to defend a GAC Early Warning issued by the ICANN GAC, if there is no parallel due process set-up for an Accountability Hearing that would, at a minimum, judiciously investigate the issues that we have raised, and present the results for the interest of the global Internet-using public and global ICANN Community; so as to profoundly demonstrate that there will be no miscarriage of justice under any circumstances over the matter of .Africa?

Within a multi-stakeholder ethos as practiced within the ICANN Community, we strongly believe that it is only fair to demand that our voice should be heard. The ICANN GAC should have tried to address our concerns regarding the specific points of accountability that we demanded in our Response to the GAC Early Warning. **Lip-service cannot be paid to multi-stakeholder Global Internet Governance if the voice of an eligible and victimized new gTLD applicant can be so easily muzzled into insignificance by the collective power of the governments represented at ICANN**, now living up to their mythical billing as 'Leviathan'. Indeed, we feel very disappointed that 'Governments at ICANN' have not listened to us, and have thus wielded their 'mighty powers' rather injudiciously against DCA's application. We are frustrated with the

⁵ Please also see Page 4 of *DotConnectAfrica Trust (DCA Trust) Response to the ICANN GAC Early Warning Advice*. In our official response to the GAC Early Warning Notice we had demanded accountability and full disclosure on:

- i. Which firms and organizations participated in the RFP process
- ii. What they had each proposed
- iii. How they were evaluated
- iv. What merit-based system was employed in the evaluation of the respective proposals
- v. The relative scores obtained by each evaluated participant
- vi. The final rankings and how the decision was arrived at to select UniForum South Africa as 'an African-based registry';
- vii. The final Evaluation Committee minutes that were taken during the meeting to decide on the selection of UniForum
- viii. The names of those who assented to those minutes;
- ix. The decision of the AU Tenders Board to approve the selection of UniForum SA, and the official signatories to that decision
- x. A full public disclosure to the ICANN Board and ICANN GAC in order to further substantiate the GAC Early Warning Advice against DCA Trust's application for the .Africa gTLD name string.

outcome of GAC's deliberations at Beijing; and we have every right to be, since faith must be retained in governments, and government must listen to, and address, the most important concerns of global citizens. Philosophically speaking, **ICANN thrives on consensus, and autocracy as manifested by the present GAC Objection Advice against DCA Trust's application, is a major dialectical contradiction, and should not be countenanced by the ICANN Board.**

We therefore wish to vigorously reinforce our plea to the ICANN Board of Directors to dissociate themselves completely from this GAC Objection Advice and not to accept it.

1. DCA Trust Obtained Early Support from the African Union Commission

We again would like to reassure the entire ICANN Global Community and Governments that are represented at ICANN that DCA Trust has no problems with the African Union Commission. We know about government support which explains why DCA Trust went to the AUC and UNECA as early as 2008 and 2009 to respectfully request for it; and we are proud to say that the endorsements to support our initiative, which were sought on the **basis of direct formal requests presented to the organizations, were freely granted by the respective inter-governmental -cum-diplomatic authorities.**

We therefore reject the insinuation that the .Africa new gTLD application submitted by UniForum ZA Central Registry is somehow more valid than the .Africa application that was submitted by DCA Trust because they managed to contrive questionable AU support; but even so, reneging on the terms of their AU endorsement by submitting a fraudulent⁶ application which did not acknowledge an African Community in it. "Anyone coming to equity must come with clean hands", so says the legal/philosophical maxim on the core principles of Equity; and in this case, we stand by our position that UniForum has not engaged with 'clean hands' over the issue of .Africa.⁷ Accepting a GAC Objection Advice against DCA's application will be against the canons of equity and justice. Why should UniForum's fraudulent application⁸ for .Africa now

⁶ Please see Note 8 below for further explanations

⁷ See for example, the argument formulated by Harvard Law School Professor, Henry E. Smith published in 'Yale Law' that "**equity relies directly on basic morality**" and that equity receives "**much of its substance from everyday moral disapproval of deceptive behavior**" and moreover, a "**wrong doer is not supposed to profit from his own wrong**". See 'An Economic analysis of Law versus Equity', October 22, 2010, available at: http://www.law.yale.edu/documents/pdf/LEO/HSmith_LawVersusEquity7.pdf

⁸ Ibid. Harvard Law School Professor Henry Smith believes fraud "**is a knowing misrepresentation that is intended to induce another to part with an entitlement and that succeeds in doing so**", and that "**legally, fraud is narrowly defined but there is a larger set of misrepresentations that have an effect similar to fraud.**" The key word here is 'misrepresentation' by which, as we have always maintained, UniForum ZA Central Registry misrepresented their application by claiming to have the support of an 'African Community' that it was endorsed to apply on its behalf, but deliberately failing to acknowledge the same community in its application as per its official answers to ICANN Evaluation Criteria questions regarding a Community relationship. The key argument here being that if this deliberate misrepresentation is allowed, then ICANN could be defrauded along with the African Union Commission who had parted with the endorsement, and that only an equitable decision-making by the ICANN Board of Directors would prevent this fraud from being perpetrated. We believe that DCA Trust as an applicant that has not done anything wrong should not be the victim of this fraud that has been committed by the apparent misrepresentation contained in UniForum's application for .Africa.

be the principal beneficiary of an autocratic GAC Objection Advice against DCA's application for .Africa? It is therefore incumbent upon the ICANN Board of Directors not to accept **a dictatorial fiat from the ICANN GAC that is portentously inequitable and iniquitous in all its ramifications.**⁹ In a democratic world order that seeks the balanced input of equity in the settlement of any contentious dispute, such self-serving recourse to autocratic Leviathanism should be seriously discouraged and firmly deplored by all global citizens.

2. *The Need for Accountability*

We have already escalated our matter to the United States Congress, the highest institution of the US Federal Government, and we shall continue to count on the outcome of a prospective Congressional Accountability Hearing to be adjudicated by a Special Independent Counsel acting as new gTLD Program Ombudsman, which we hope will vindicate us and indict UniForum and its principals for fraudulent misrepresentation and deceit. **We need not remind anyone that even ICANN had to seek prior approval and supportive encouragement from Congress in public hearings before proceeding with the actual implementation of the new gTLD Program, so no one should scoff at our intentions of escalating our grievances to Congress as an important arbiter with cross-cutting and over-riding legislative and oversight responsibilities.** The United States Congress as a duly constituted parliamentary body, can always exercise the principle of 'Sovereignty of Parliaments' to inquire about anything; therefore, the power of Congress to act on anything cannot be questioned or circumscribed. Apart from the United States Congress, other parliamentary bodies in governmental jurisdictions elsewhere also have similar wide-ranging powers.¹⁰

As a direct consequence, we do not accept that the prospects for a due process Congressional Investigation should be forestalled by a 'misadvised' GAC Objection Advice. As already pointed out, ICANN, even as it undertakes its Internet Expansion project, is also accountable to the United States Congress as a U.S. Federal Contractor. Again, we would like to emphasize that the transparency and accountability that we have been insisting upon cannot be so easily buried by a contrived autocratic process that is typified by this high-handed GAC Objection Advice.

⁹ Ibid. Again, we cite Professor Henry Smith's arguments which are anchored on the fact that equity is a legal solution to opportunism, and **"equity is a coherent mode of decision making in which features work together to combat opportunistic behavior."**

¹⁰ For example, section 88(lb) and (2b) of the Constitution of the Federal Republic of Nigeria, 1999, as amended, requires the House of Representatives of the Nigerian National Assembly to conduct an investigation into the public affairs of any person, authority, Ministry or government department for the purpose of exposing corruption, inefficiency or waste in the execution or administration of laws. As such, we believe that any parliamentary body, including the U.S. Congress has to be completely mindful of the weighty accusations that DCA Trust has reported officially and why it has called on Congress to appoint an Independent Counsel as a Special new gTLD Ombudsman to investigate and adjudicate on any matters of illegality that have been reported by applicants regarding the new gTLD Program.

3. *A Way Forward*

DCA Trust has previously outlined a Way Forward on .Africa to ICANN, and we need to once again, reinforce the same position as part of our response to the GAC Objection Advice. The processing of applications should continue. The evaluation of our new gTLD application should not be prejudiced in any way. If we pass the Initial Evaluation, we shall present this as ample proof of the viability of our application to enable us go back to the African Union Commission to discuss and negotiate under mutual and cooperative terms. We have always preferred conciliatory gestures and we are amenable to a mutual settlement as encouraged by ICANN in situations of string contention as we now find ourselves. A mutual and equitable settlement of the string contention cannot be achieved if one party wields its governmental power as a sledge hammer that can be used to deal a 'sudden death' knockout punch to kill one application as a way of resolving the string contention over .Africa new gTLD.

Our position is that in the absence of any official Accountability Hearing on the issues that we have raised and reported as our grievances against UniForum ZA Central Registry, the implementation of **any policy action against DCA's application by the ICANN Board would be absolutely unlawful**. At this time, we believe that statesmanship and conscientiousness are required from all public authorities who have a stake in this matter; **in which case, any autocratic, high-handed efforts could cause illegality to be covered up**. Accountability and transparency cannot be simply shoved aside by the hubristic intimidation of DCA Trust with the help of those who oppose it on the ICANN GAC. If there is no accountability, then this issue of government support (or lack of support) for applicants should no longer be considered as relevant to the .Africa new gTLD process, and the **policy decision by the ICANN Board should now be based only on the other evaluated technical, operational and financial criteria**.

4. *GAC Objection Advice against DCA's .Africa Application is Anti-competitive*

Another strong point of disagreement we have with the GAC Objection Advice is with respect to the issue of competition. The GAC Core Principles consider that ICANN's decision making should take into account public policy objectives that promote effective and fair competition.¹¹

However, we see the GAC Policy Advice as a wrong step, and against the explicit commitment to fair competition as enshrined in the Core Principles, against the backdrop that the AU is a sort of 'co-applicant' that has already mainstreamed itself as part of the UniForum ZACR application and applying structure. To simply drive home our analogy: the GAC Objection Advice portends to tie our hands behind our back whilst asking us to participate in a boxing match. Such a pugilistic contest would be very unfair and unbalanced, since it would be rather obvious to all the spectators that the hamstrung boxer has been pre-designed to lose the match. It is even more significant and absurd to observe that the boxer whose hands have been tied, have actually been tied by his opponent in the boxing match!

¹¹ For example, the Core Principles of GAC includes the following important consideration: ***"Effective competition at all appropriate levels of activity and conditions for fair competition, which will bring benefits to all categories of users including, greater choice, lower prices, and better services."*** Please see <https://gacweb.icann.org/display/gacweb/Core+Principles>

We believe that the AU's involvement as endorser and co-applicant has further complicated the entire process and has made the UniForum ZACR application more opaque than ever. **In a situation where the African country governments have not endorsed UniForum but have only supported the position of the African Union on .Africa; it is highly questionable on philosophical grounds, whether the political support that has been indeed granted by African countries to the AU as an inter-governmental body representing African country governments can directly translate into an endorsement for a .Africa new gTLD that has been applied for to ICANN under the auspices of the globally approved new gTLD program.** Moreover, the African country governments have only expressed support for the African Union's Position regarding the official request that was made to ICANN for the reservation of the .Africa gTLD name string and related name strings in other languages. For example, the letters written by the Namibian and Kenyan governments to the African Union tend to confirm this assertion.¹² When these letters are compared with the straight-forward Letter of Endorsement granted by the Kenyan government in support DCA's application¹³, it soon becomes clear on closer examination that a letter that has been written by an African country government in support of the AU's position on .Africa is quite different from a Letter of Endorsement that has been written by an African country government in support of an application for .Africa new gTLD.

We believe that these questions and contradictions must be resolved first of all, before any high-handed GAC Advice Objection against our .Africa application is countenanced by the ICANN Board. It remains quite significant to our argument and response (defense) that so far, no African country government has directly endorsed the application of UniForum ZA Central Registry. **As a matter of fact, we contend that if UniForum has not been endorsed by 'name' by any African country government (and the evidence at our disposal profoundly suggests that this is actually the case), we do not accept that their application should be allowed to continue by the ICANN Board,** whilst ours should be stopped on the basis of a GAC Policy Advice Objection. It is not our fault that the ICANN GAC has not thoroughly considered the issues at stake before issuing their GAC Objection Advice. Even GAC should be accountable for its actions.

Before reaching the conclusion that our application warrants a GAC Objection Advice, the GAC should have actually determined that the competing application submitted by UniForum has the requisite support from African country governments. The ICANN GAC should have not been so quick to reach the premature and inchoate conclusion that African country government support for an AU position on .Africa is equivalent to African country government endorsement for the application that has been submitted by UniForum ZA CR.

¹² For example, see <http://tandaabiashara.com/wp-content/uploads/2013/04/Kenyas-position-on-Dot-Africa-copy.pdf> for Kenya's letter and <http://www.dotconnectafrica.org/icann-related-2/third-party-documents/> for Namibia's letter.

¹³ See for example, <http://www.dotconnectafrica.org/yes-campaign/dca-endorsements/> for a copy of DCA's endorsement letter received from the Government of Kenya.

5. *The ICANN Board should accept the Principle that only ICANN should determine the delegation of .Africa new gTLD*

DCA Trust hereby insists that as far as the new gTLD Program is concerned, it is only ICANN that determines how the new gTLDs should be decided and delegated as per approved new gTLD Program criteria, but the African country governments have simply expressed the position that the AU should actually determine how .Africa should be decided and delegated. **This is *ultra vires*, and it would behoove GAC as part of ICANN not to support an unsustainable position that is actually at variance with the centrality of ICANN's role as the only accepted and approved delegation authority within the new gTLD program.** Moreover, we wish to emphasize that we are not aware that the rules have been changed to allow African country governments to exercise a supernumerary role in determining the delegation outcome of .Africa. We have always placed our faith in the prescriptions of the new gTLD Program guidelines as codified in the Applicant's Guidebook that ICANN determines all new gTLDs, and .Africa is no exception.

Again the dialectical contradiction is rather obvious: we have applied to ICANN, but somehow, African countries believe that ICANN does not have the power within its own new gTLD program to determine the fate of a particular new gTLD, because the power to determine and delegate has been granted to the African Union by the African country governments. Perhaps, we all need to return to the fundamentals of jurisprudence to help us resolve these points of disputation. Until then, we urge the ICANN Board to set aside the GAC Advice Objection. The position of the African country governments, who have granted political authority to the African Union Commission as an Africa-based inter-governmental organization, is as it were, an entirely political matter. **The legitimate use of this power as far as governmental support for new geographical TLDs is concerned is to properly endorse one or more eligible applicants, but not for the named diplomatic authority, in this case, the African Union Commission, to actually make the determination as if ICANN's role is of no consequence regarding the fate of .Africa.** The fact that the African Union Commission used its political influence and diplomatic authority to push through the GAC Objection Advice is limpid proof that the AU remains convinced that it should determine the delegation outcome of .Africa, and not ICANN. An acceptance of the GAC Objection Advice against DCA's application for .Africa by the **ICANN Board would also imply that the ICANN Board also accepts this patent usurpation and reversal of roles.**

6. *The ICANN Board should not implement a GAC Policy Advice that it had somehow initiated*

All of the above would remain extremely pivotal to our case and explains why we shall continue to urge the ICANN Board to allow our application to proceed. **The other leg of our response is anchored on the fact that the ICANN Board should not implement a GAC Policy Advice decision that it has initiated on its own:** that is, to the extent that the origins of AU's coordinated GAC Objection Advice against DCA's .Africa application are directly traceable to the ICANN Board. In a nutshell, the GAC Objection Advice that we are now responding to seems to have emanated from the ICANN Board.

We may recall that about the time of the ICANN-42 International Meeting that took place in Dakar Senegal in October 2011, as part of the African Agenda that was devised and arrived at by the African Ministerial Roundtable and Meeting of Experts, the African Union had submitted a 12-point request to the ICANN Board, of which the most audacious request was asking for the reservation of the .Africa name and its equivalent in other languages and Arabic IDN as a special legislative protection that would enable the delegation of the names to be done by the AU to a 'structure' that the AU will identify and select outside the aegis of the new gTLD Program. It is our understanding that the ICANN Board had faithfully considered these requests made by the AU, and whilst not expressly approving the request for .Africa to be placed on the List of Top-Level Reserved Names, had indeed recommended in its 8th March 2012 letter to the African Union to influence the delegation outcome of .Africa through the employment of both Community Objection and GAC Policy Advice as workable strategies.

We hereby cite the position conveyed in the letter written and signed by Dr. Stephen Crocker, in his capacity as Chairman of the ICANN Board of Directors, acting on behalf of ICANN, to Dr. Elham M. A. Ibrahim, AU Commissioner for Infrastructure & Energy, as the official recommendation of ICANN to the AU Commission.

ICANN's letter to the AU notes inter alia:

"While ICANN is not able to offer the specific relief requested in the Communiqué, the robust protections built into the New gTLD Program afford the African Union (and its individual member states), through the Government Advisory Committee, the opportunity to raise concerns that an applicant is seen as potentially sensitive or problematic, or provide direct advice to the Board. In addition, the African Union (and its individual member states) can avail itself of any of the appropriate objection processes mentioned above in the event an application is received for any string – even those beyond representations of .Africa – that may raise concern".¹⁴

We believe that the AU had accepted the recommendation of **'providing direct advice to the Board'** with full certainty, having been reassured that if it indeed adopted the GAC Policy Advice route as its 'objection method', **that ICANN would accept the outcome**. And so we now have an ethical quagmire even for ICANN: the AU requests for Special Legislative Protection on .Africa as a special treatment for the name string(s) that it is interested in, and ICANN refuses officially, **but instead recommends to the AU to utilize the route of a GAC Policy Advice to achieve its aims of protecting the .Africa name(s) for itself; which the ICANN Board decided to accept/approve, thereby enabling the AU to accomplish the objectives which it had sought in its original request to the ICANN Board**. Why should an eligible applicant such as DCA Trust that has so far, not contravened any new gTLD provisions or broken any national laws be subjected to the uncertainties and risks of participating in a new gTLD Program which could have been obviated **if ICANN had agreed a priori to the AU's original request?** DCA Trust therefore believes that *a fortiori*, the ICANN

¹⁴ See <http://www.icann.org/en/news/correspondence/crocker-to-ibrahim-08mar12-en> for further details.

Board should also reject the GAC Objection Advice for the same reason that it rejected the AU's original request for .Africa to be included in the List of Top-Level Reserved Names.

The ICANN Board's recommendation makes it a **colluding party to any intentions expressed by the AU**; to wit, that the .Africa names should be reserved for it, and **accepting the AU's initiated GAC Objection Advice implies that ICANN has assisted the AU – directly or indirectly - to achieve its objectives**. Therefore, it is our contention that the ICANN Board should avoid this ethical quagmire and **'quicksand of conflict'** by side-stepping the GAC Objection Advice that has been obtained by the African Union Commission against DCA's new gTLD application for .Africa. The ICANN Board should **maintain its impartiality at all times, and not convey advice to the African Union that would enable the AU get rid of its opponents in obvious violation of the rules of fair completion** that is encouraged under the new gTLD program.

In summing up, at the risk of over-emphasizing simply to drive home an important point, we wish to stress once again that it would be ethically problematic for the ICANN Board to accept to implement and enforce a GAC Objection Advice that it had somehow initiated by recommending same earlier to the African Union Commission.

Part B

Supplementary Arguments to Further Buttress Our Response

We have already presented the finer and more solid points that are crucial to our overall response as articulated above in Part A. Nevertheless, we wish to also present some other supplementary arguments that are no less substantial, so as to further consolidate our response.

We have already shown that DCA Trust's application for the .Africa new gTLD did not attract any other formal objection procedures that were filed on the grounds of String Objection, Legal Rights, Community, or Limited Public Interest grounds. We believe that if no grounds were actually found to object to DCA's application on the basis of the four allowable objection criteria, **why should a GAC Objection Advice be considered as any more valid?**

7. *There was no Consensus on GAC advice over DCA's Application*

On our part, instrumental to our response to the GAC Objection Advice is our strong belief and understanding that there was actually no consensus on this issue. First, the entire ICANN GAC body is comprised of over 120 governments. The GAC Communiqué that resulted from the Beijing Meeting clearly indicates that only sixty-one (61) GAC members attended the Beijing meeting. We believe that overall consensus could not have been achieved in a situation **where about 50 per cent of GAC members did not participate in the meetings.**¹⁵

¹⁵ Please refer to the introductory part of the GAC Beijing Communiqué for general information on attendance.

Second, the GAC advice was forcefully pushed through with the assistance of the strident polemics and tactics of intimidation employed by Ms. Alice Munyua, an active supporter and Steering Committee member of the UniForum ZACR application¹⁶; who claimed to represent Kenya on the GAC to enable her push the agenda of obtaining a GAC Objection Advice against DCA's application, whereas in truth, her GAC tenure has already expired since the ICANN Toronto meeting, after which she was replaced by another officially accredited Kenyan government representative. **Against the backdrop that Ms. Alice Munyua was not a member of GAC but is a member of the Steering Committee of the Africa In One Space initiative, and had actually attended the GAC meeting to assist the UniForum ZA Central Registry application, we question the validity of her attendance and maintain that her vigorous participation in the GAC proceedings with the sort of open bias demonstrated against DCA Trust led to the GAC Objection Advice that was accomplished.** On these grounds therefore, we would like to urge the ICANN Board to note this as fraudulent misrepresentation by an individual who was no longer accredited to GAC, but had somehow ingratiated herself with other GAC members even though her tenure has already expired in order to achieve a sinister objective against DCA Trust. We wish to strongly emphasize that Ms. Alice Munyua was acting as an impostor, and was no longer the Kenyan GAC Advisor (or GAC representative of Kenya) by the time of the ICANN Beijing Meeting which took place in April 2013. Her input and participation were mainly designed to ensure that the GAC Objection Advice that was contrived against DCA's application was obtained anyhow, by hook or crook. **We insist that her participation in the GAC deliberations was highly inappropriate, deceitful and irregular, and this somehow affects the legality and validity of the GAC Objection Advice.**

Furthermore, the **GAC Advice Objection was obtained amidst the protestations of the duly accredited Kenyan GAC Representative and GAC Advisor who did not support it;** which again confirms our belief that there was no consensus by the GAC. Those who attended the GAC meeting were hardly given an opportunity to say anything to the contrary. To reinforce for clarity, we wish to re-state the text of the electronic mail messages sent by the officially accredited Kenyan government representative and advisor to ICANN GAC. This is clear evidence that it was not the consensus of the entire GAC that DCA's application for .Africa should not be allowed to proceed.

¹⁶ For example, see <http://www.africanonespace.org/team.php?type=SteerComm> where her photograph is prominently displayed as a member of the .Africa Steering Committee and Registry Project Team working with Africanonespace/UniForum ZA Central Registry who have submitted the other application for .Africa

GAC Advice Response form for Applicants

From: Sammy Buruchara
To: GAC Secretariat
Cc: fadi chehade "Katundu , Michael"
Sent: Tuesday, April 9, 2013 10:31 PM
Subject: Re: Change of Kenya's GAC Advisor

Dear Heather,

As the newly appointed Kenyan Government advisor to the GAC, I wish to inform you that I was not able to attend the Beijing meeting due to an unforeseen personal circumstance.

It has come to my attention that Alice Munyua has introduced herself as the Kenya's gov representative to the GAC.

This is inform you that Kenya does not stand by what Alice states in the GAC since she ceased to be the Kenyan Government advisor for GAC on the day of my appointment.

Further, should the situation arise, Kenya does not wish to have a GAC advise on DotConnect Africa Application for .africa delegation.

Regards
Sammy Buruchara
GAC Advisor

----- Original message ----- Subject:Re: [GAC] dotafrica text proposed for communique From:Sammy Buruchara
To:gac@gac.icann.org Cc:

Kenya objects to the above text on the following reasons:

- that AU has representation in the GAC.
- AU has endorsed a candidate for the .africa delegation. It is therefore an interested party.
- AU can therefore not object to another candidate. It must instead leave the process to the ICANN committee to evaluate based on the guide book.

There is an apparent conflict of interest in this issue and GAC members representing AU governments while they have a right to support a certain candidate, must not under the same AU auspice, be the ones to object to other competing candidates.

Kenya therefore does not accept this dotafrica communique.

Regards
Sammy Buruchara

Kenya GAC Representative

The email messages reproduced above clearly witness that:

- i. The change notified by the accredited Kenyan GAC Advisor indeed confirmed that Ms. Alice Munyua was no longer the Kenyan Representative to GAC.
- ii. Whatever position that Ms. Alice Munyua had communicated to GAC was not confirmed by Mr. Sammy Buruchara as the official position supported by the Kenyan Government.

- iii. Mr. Sammy Buruchara indicated clearly in his email communication that it was not the wish of the Kenyan Government that a GAC Advice should be issued against DCA's application for .Africa
- iv. Mr. Sammy Buruchara had also clearly stated that Kenya did not accept the text of the .Africa Communiqué that was proposed.
- v. The communications were sent to the official electronic mail address of the GAC Secretariat and copied to ICANN officials as well as the Kenyan GAC representative present at the meeting.

It is therefore germane to our response that Kenya as an African country government that has **already endorsed DCA's application for .Africa, did not accept that a GAC Objection Advice should be issued against DCA's application.** The move by Ms. Alice Munyua to wave another letter from Kenya that purportedly supports the AU's position – that is, the usual 'standard issue' from African country governments - was meant to obfuscate the process, and confuse the other GAC members. At best, the outcome of the GAC proceedings at Beijing regarding the GAC Objection Advice that was contrived against DCA's application is fundamentally the result of a meddlesome effort orchestrated by an **unaccredited impostor who had dabbled in the official work of GAC in a most peculiar manner;** and at worst, it was a shameful travesty which lacked any credibility in terms of its irregularity. The remonstrations of duly accredited GAC representatives from Kenya were ignored, so how does that count for GAC Consensus?

Again, we wish to substantiate our response by referring to the official stipulations contained in the GAC Core Principles regarding Consensus.

With respect to how the GAC is expected to conduct its official business, Principle 41, specifies that

“Representatives wishing to develop their position on a particular matter in fuller detail may circulate a written statement for distribution to Members.”¹⁷

We therefore contend that the email messages sent by Mr. Sammy Buruchara to the GAC Secretariat should be seen and interpreted in line with this principle; in which case, Kenya's dissenting view not to support the GAC Advice against DCA's application would have received wide circulation amongst the GAC members, thus pointing to the possibility of an apparent lack of consensus.

Furthermore, with respect to how the GAC arrives at a consensus-based Policy Advice to the ICANN Board, Principle 47 specifies that:

“The GAC works on the basis of seeking consensus among its membership. Consistent with United Nations practice, consensus is understood to mean the practice of adopting decisions by general agreement in the absence of any formal objection.”¹⁸

Based on this enshrinement and the evidence that we have already presented regarding what actually took place, we again submit that Kenya's dissenting view was a 'formal objection', which when interpreted on

¹⁷ See <https://gacweb.icann.org/display/gacweb/Core+Principles>

¹⁸ Ibid.

the basis of Principle 47, clearly indicates that there was no general agreement, thus putting into doubt, the validity of the GAC Objection Advice against DCA's application which was somehow obtained in the absence of consensus.

8. *UniForum ZA CR does not have the support of African Country Governments*

The unwritten and unspoken strictures imposed by statesmanship dictate that the African Union Commission should no longer mainstream itself in the .Africa process. We think that the AUC should have tried to maintain impartiality, and isolate itself from the process and restrict its role to that of an endorser. Instead, the AUC has made .Africa a political issue and sided with UniForum ZA Central Registry, the other competing applicant for the .Africa string. The overt politicization of the issue of governmental support has caused huge problems of transparency and accountability.

A juridical examination will show that UniForum has no government endorsements of its own, so there is a compelling need for existing assumptions to be further re-examined. Revisionism starts by accepting to question what we already know, or what we thought we always knew in order to arrive at new answers. It is only through iconoclastic re-examination of facts or generally held assumptions that we can show that UniForum has no governmental supports, and the general thinking that UniForum has government supports for its .Africa application must be revised.

For the avoidance of doubt, we wish to maintain that an African country government writing a letter in support of the AU's position on .Africa does not directly translate into the same African country government providing an endorsement for UniForum's application for .Africa. **We have not seen where it is stated in the new gTLD Program Guidebook that governmental endorsements are transferrable from a non-applicant, in this case, the AUC that has active political support for a geographic string from African country governments, to an official applicant for the geographic string,** in this case, UniForum ZA Central Registry, who lacks such governmental support in its name. Everything that has been done so far must be subjected to a very critical examination of what actually constitutes legality. In our estimation, it is not legal for the political support received by the AU as an inter-governmental entity from African country governments to be taken on face value by the ICANN Board of Directors as somehow equivalent to a blanket endorsement for UniForum's application under the terms of the new gTLD Program.

9. *GAC Objection Advice contravenes Guidebook provisions regarding new gTLD Program Activity Time-Table*

Again, we maintain that the GAC Objection Advice against DCA Trust's application was most irregular in terms of its timing that flagrantly contravenes published new gTLD Program guidelines as presently codified in the Applicant's Guidebook.

The new gTLD program guideline clearly indicates in Module 3: Objection Procedures, Section 3.1 that:

“For the Board to be able to consider the GAC advice during the evaluation process, the GAC advice would have to be submitted by the close of the Objection Filing Period.”

We believe that a GAC Objection Advice that was achieved and publicly notified via a GAC Communiqué dated 11th April 2013, nearly 1 month after the Objection Filing period closed officially on 13th March 2013, is most irregular and should therefore not be considered by the ICANN Board of Directors. The Guidebook stipulations are quite unambiguous and need no further elaboration in this regard. We therefore implore the ICANN Board of Directors to note that the GAC Advice against DCA’s application has not been submitted by the close of the Objection Filing Period which was encountered on 13th March 2013.

Conclusion

In closing, we wish to reiterate our enduring position that the AU’s involvement has created unnecessary complications in the decision path of .Africa, and the only way to resolve this problem amicably is for the issue of government support to be made irrelevant in the process so that both contending applications for .Africa would be allowed to move forward by the ICANN Board based on the outcome of the Initial Evaluation, and for any contentions regarding the .Africa name string to be resolved based on the enshrinements of the new gTLD Program Guidebook.

Finally, on the basis of our response and the arguments that have been marshaled above in support of our position, we respectfully urge the ICANN Board of Directors not to accept the GAC Objection Advice that was issued against DotConnectAfrica Trust’s application (ID: 1-1165-42560) for the new .Africa gTLD.

Thanking you in anticipation of your kind consideration and diligent action.

Yours sincerely,

For & On Behalf of DotConnectAfrica Trust

A handwritten signature in red ink that reads "Sbekele".

Ms. Sophia Bekele, BS, MBA, CISA, CCS, CGEIT
Applicant for the .Africa new gTLD String Application ID: 1-1165-42560

May 8, 2013

GAC Advice Response Form for Applicants

The Governmental Advisory Committee (GAC) has issued advice to the ICANN Board of Directors regarding New gTLD applications. Please see Section IV, Annex I, and Annex II of the [GAC Beijing Communiqué](#) for the full list of advice on individual strings, categories of strings, and strings that may warrant further GAC consideration.

Respondents should use this form to ensure their responses are appropriately tracked and routed to the ICANN Board for their consideration. Complete this form and submit it as an attachment to the ICANN Customer Service Center via your [CSC Portal](#) with the Subject, “[Application ID] Response to GAC Advice” (for example “1-111-11111 Response to GAC Advice”). All GAC Advice Responses must be received no later than 23:59:59 UTC on 10-May-2013.

Respondent:

Applicant Name	FOX Registry, LLC
Application ID	1-1167-1880
Applied for TLD (string)	FOX

Response:

Applicant notes the GAC Advice regarding "Safeguards Applicable to all New gTLDs" and will engage in best efforts to comply with the safeguards set out by the GAC as part of any contractual undertakings between itself as Registry Operator for .FOX and ICANN under the Registry Agreement.

Respondent:

Applicant Name	Tucows TLDs Inc.
Application ID	1-1171-56570
Applied for TLD (string)	.MEDIA

Response:

Tucows TLDs Inc. has received and considered the GAC's advice concerning applications for the .MEDIA gTLD, and welcomes the opportunity to respond.

About Tucows TLDs Inc. and .MEDIA

Tucows seeks to provide simple, useful services that help people unlock the power of the Internet. Our mission is to provide a web address and email address for every person and business.

We believe .MEDIA will provide Internet users with an easier means of recognizing web and email addresses featuring content or services related to the wide range of purposes the term 'media' provides. Moreover, .MEDIA will make additional memorable, relevant names available to new registrants. We believe less confusion provides a substantial benefit to the Internet user community, as it will allow them to more easily and more readily understand the purpose or motives of the registrant's website or email, allowing for better, more efficient and more effective use of their time online.

Addressing a perceived higher level of risk associated with consumer harm
